

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

LT3591
 LED Driver with Integrated Schottky in
 3mmx2mm DFN

DESCRIPTION

Demonstration circuit 1124 is an LED Driver with Integrated Schottky in 3mmx2mm DFN featuring the LT3591. The LT3591 is a fixed frequency step-up current mode DC/DC converter to drive up to ten white LEDs in series. The high switching frequency allows using tiny components for the circuit. External components are minimized by integrating the schottky diode and the open circuit protection into the package. The high side current sensing feature of the LT3591 allows “one wire” current source, i.e. the low side of the LED string can return to ground anywhere. The input voltage range of the demo board is from 3V to 9V. This driver can provide 20mA for up to 10 LEDs. Different dimming controls can be

implemented on the demo board. Please refer to the quick start procedure.

The LT3591 datasheet gives complete description of the part, operation and application information. The datasheet must be read in conjunction with this quick start guide for working on or modifying the demo circuit 1124.

Design files for this circuit board are available. Call the LTC factory.

LT, LTC and LT are registered trademarks of Linear Technology Corporation. ThinSOT and PowerPath are trademarks of Linear Technology Corporation.

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V_{IN}	Input Supply Range **		3		9	V
I_{OUT}	Output Current	$V_{IN} = 3V, 10 \text{ LEDs}$			20	mA
η	Efficiency	$V_{IN} = 3.6V, 10 \text{ LEDs}$		78.2		%
V_{OPEN}	CAP pin Over voltage Protection	LED Open	40	42	44	V
I_Q	Quiescent Current	$V_{IN} = 3V, V_{CTRL} = 3V$			5	mA
I_{QSHDN}	Quiescent Current While in Shutdown	$V_{IN} = 3V, V_{CTRL} = 0V$			11	μA
F_s	Switching Frequency		0.75	1	1.2	MHz

** The Input Supply Range of the demo circuit 1124 is limited by the input capacitors. The input voltage absolute maximum rating of the LT3591 is 12V.

QUICK START PROCEDURE

Demonstration circuit 1124 is easy to set up to evaluate the performance of the LT3591. Refer to Figure 1 for

proper measurement equipment setup and follow the procedure below:

LT3591

NOTE . When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the Vin or Vout and GND terminals. See Figure 2 for proper scope probe technique. Place jumper JP1 in the ON position.

1. With power off, connect the input power supply to V_{IN} and GND.
2. Turn on the power at the input.

NOTE . Make sure that the input voltage does not exceed 9V.

3. Check for the proper voltage and current.

NOTE . If the LEDs do not light up, check the jumper setting and LED connection.

4. Once proper operation is established, adjust the input within the operating range and observe the parameters of interest.
5. To test the filtered PWM dimming or the direct DC dimming, apply the PWM or the DC signal to the CTRL terminal and observe the brightness of the LED output.
6. To test the direct PWM dimming, remove C4 and R3. Install Q1 and connect CTRL with PWM pin. Apply the PWM signal to the PWM pin and observe the brightness of the LED output.
