Chipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

LTC2000, LTC2000A
16-, 14-, 11-Bit, 2.5Gsps to 2.7Gsps DACs

DESCRIPTION

Demonstration circuit 2085 supports the LTC®2000 and LTC2000A, a high speed, high dynamic range family of DACs. It was specially designed for applications that require differential DC coupled outputs. DC2085 supports the complete family of the LTC2000 including 16, 14 and 11 bit parts. For all the variations see Table 1.

The circuitry on the analog outputs is optimized for analog frequencies from DC-1.08GHz.

Design files for this circuit board are available at http://www.linear.com/demo/DC2085

Table 1. DC2085 Variants

DC2085 VARIANTS	PART NUMBER	RESOLUTION	MAXIMUM SAMPLE RATE	OUTPUT FREQUENCY
DC2085A-A	LTC2000-16	16-Bit	2.5Gsps	DC-1000MHz
DC2085A-B	LTC2000-14	14-Bit	2.5Gsps	DC-1000MHz
DC2085A-C	LTC2000-11	11-Bit	2.5Gsps	DC-1000MHz
DC2085A-D	LTC2000A-16	16-Bit	2.7Gsps	DC-1080MHz
DC2085A-E	LTC2000A-14	14-Bit	2.7Gsps	DC-1080MHz
DC2085A-F	LTC2000A-11	11-Bit	2.7Gsps	DC-1080MHz

PERFORMANCE SUMMARY   Specifications are at $T_A = 25°C$

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Voltage – DC2085	This supply must provide up to 800mA	4.8	5.0	5.2	V
Sampling Frequency (Sample Clock Frequency)		300		2500 or 2700	MHz
Sample Clock Level (Single-Ended)	Use a 50Ω Source	0		15	dBm
LVDS Inputs	Differential Input Voltage Range	±0.2		±0.6	V
	Common Mode Voltage Range	0.4		1.8	V

QUICK START PROCEDURE

DC2085 is easy to set up to evaluate the performance of the LTC2000. Refer to Figure 1 for proper measurement equipment set-up and follow the procedure below:

Setup

If the Altera Stratix IV GX FPGA Development Kit was not supplied with the DC2085 demonstration circuit, follow the Altera Stratix IV demo manual to install the required software and for connecting the Altera Stratix IV to the DC2085 and to a PC.

QUICK START PROCEDURE

HARDWARE SETUP

SMAs

J2 & J3: Differential Trigger Input. Apply a signal to J2 from a 50Ω driver. Absorptive filters are required for data sheet performance. Use J2 and J3 if the trigger is a differential signal.

J4: Sample Clock Input. Apply a clock signal to this SMA connector from a 50Ω driver. A 0dBm clock source should be sufficient, but for best phase noise and jitter performance, use the highest possible amplitude and slew rate, up to 15dBm.

J5 & J6: Differential Output Signals. These SMAs provide access to the differential outputs of the DAC. The output impedance is designed to be 50Ω at each SMA, or 100Ω differential. Connect an external balun or combiner to these pins to drive a single-ended spectrum analyzer. Linear Technology has various coupon boards for specific frequencies and applications. More information is available at www.linear.com.

J8: SYNC. This SMA is to provide access to the sync pin of the LT8614. It is not used in normal use.

Turrets

+5V: Positive Input Voltage for the DAC and Digital Circuits. This voltage feeds a series of regulators that supply the proper voltages for the DAC. The voltage range for this turret is 4.8V to 5.2V. Note: For close-in phase noise plots, driving this voltage is not ideal. There is a known 20kHz noise hump in the spectrum that is generated by the regulators. For the best phase noise performance, back drive the onboard regulators with the provided turrets from a low noise supply.

GND: Ground Connection. This demo board has only a single ground plane. This turret should be tied to the GND terminal of the power supply being used.

SVDD3V0: Optional 3.0V Input. This pin is connected directly to the SVDD pin of the DAC. It requires a supply that can deliver up to 100mA. Driving this pin will shut down the onboard regulator.

AVDD3V3: Optional 3.3V Input. This pin is connected directly to the AVDD3V3 pin of the DAC. It requires a

supply that can deliver up to 200mA. Driving this pin will shut down the onboard regulator.

DVDD3V3: Optional 3.3V Input. This pin is connected directly to the DVDD3V3 pin of the DAC. It requires a supply that can deliver up to 50mA. Driving this pin will shut down the onboard regulator.

AVDD1V8: Optional 1.8V Input. This pin is connected directly to the AVDD1V8 pin of the DAC. It requires a supply that can deliver up to 1A. Driving this pin will shut down the onboard regulator.

DVDD3V3: Optional 1.8V Input. This pin is connected directly to the DVDD1V8 pin of the DAC. It requires a supply that can deliver up to 500mA. Driving this pin will shut down the onboard regulator.

VP1: This is a test point that is at the output of the onboard switching regulator. It is meant for test purposes. It can also be driven to 2.5V to shut down the output of the switching regulator.

TSTP & TSTN: These pins are tied directly to the TSTP and TSTN pins of the DAC. They can be used to measure the internal temperature and timing of the LVDS inputs.

FSADJ: This is an optional pin that is tied directly to the FSADJ pin of the DAC. It can be used to set the full-scale output current of the DAC. In normal operation this pin is tied to GND through 500Ω to set a current of 40mA at the output.

REFIO: This pin is tied directly to the REFIO pin of the DAC and is used to set the reference voltage for the DAC. Normally it is internally set to 1.25V but can be overdriven with an external voltage from 1.1V to 1.4V.

Jumpers

The DC2085 demonstration circuit should have the following jumper settings as default positions.

JP1: PD. In the RUN position this pin results in normal operation of the DAC. In the SHDN position the DAC is powered down. (Default: RUN or up)

JP2: SPI and JTAG. This jumper selects how the FPGA is programmed. In the SPI position the FPGA is programmed from the onboard FTDI chip and the LTDACGen software. In

QUICK START PROCEDURE

the JTAG position the J9 is used with a JTAG programmer to program the FPGA. (Default: SPI or down)

Connectors

J1: DC590. This is an optional header that can be used to program the DAC with the DC590. (Default: removed)

J9: JTAG. This is an optional header that can be used to program the FPGA through a JTAG programmer. (Default: removed)

J7: USB. Connect a USB cable from J7 to a computer with the LTDACGen software installed.

J10 & J11: HSMC Connectors. These connectors are designed to connect to the Altera Stratix IV development board. All of the communication between the FPGA and the DAC is routed through these connectors.

APPLYING POWER AND SIGNALS TO THE DC2085 DEMONSTRATION CIRCUIT

If a Stratix IV demo board is used to supply data to the DC2085, the two boards should first be bolted together

and a proper connection should be made. If Linear Technology provided the Stratix IV board the proper bit file is already installed in flash memory and will begin to operate when the board is powered on. If an unprogrammed FPGA board is used, refer to the appropriate documentation on how to program it.

Power should be applied to the system in this order:

1. Connect the Altera board to the provided power supply.

2. Connect the USB cable to J7.

3. Apply a clock to J4.

4. Connect any optional output board to J5 and J6.

5. Turn on the voltage to the Altera board.

6. Connect the 5V from a bench supply to the +5V turret on the DC2085.

7. Open the LTDACGen software and hit connect.

LTDACGen should report back that it is connected to the FPGA. See Figure 2:

Figure 2. LTDACGen Connected to FPGA

QUICK START PROCEDURE

ANALOG OUTPUT NETWORK

The analog output network of the DC2085 has been designed to maximize the performance of the LTC2000. The LTC2000 drives two 50Ω resistors on each side to minimize the impedance it sees. This maximizes the SFDR the DAC is able to produce. If a larger signal swing is required this impedance can be increased, but the SFDR might degrade. The output also has a pi network of 50Ω resistors to pad the output impedance of the board up to 50Ω per side. This allows the demo board to drive a 50Ω analyzer through a balun or other combiner.

Linear Technology has various coupon boards for specific frequencies and applications. More information is available at www.linear.com.

SAMPLE CLOCK

The sample clock to the DC2085 demonstration circuit board is marked J4. As a default it is a single-ended 50Ω input port. There is an onboard balun that does a single-ended to differential translation.

For the best noise performance, the sample input must be driven with a very low jitter signal generator source. The amplitude should be as large as possible up to ±1.8V or 9dBm.

SOFTWARE

The software for the DC2085, LTDACGen is available at www.linear.com free of charge. It simplifies the creation of complex waveforms and loading them into the FPGA to test the DC2085. For more information about how to use the LTDACGen software, refer to the help files that come with the software.

RESULTS

After everything is set up and the software is connected to the DAC demo system, a sine wave can be added to the output waveform. The default frequency is 399.932861328MHz (Figure 3). By clicking Update FPGA, the data is sent to the FPGA and is then used to program the DAC. A spectrum analyzer can then be used to view the results (Figure 4).

31	3	J2, J3, J8	CON., SMA JACK, STRAIGHT, THRU-HOLE	AMPHENOL CONNEX, 132134
32	1	J4	CON., SMA PCB TOP MOUNT	AEP, 9650-1113-005
33	2	J5, J6	CON., SMA 50Ω EDGE-LAUNCH	EMERSON, 142-0701-851
34	1	J7	CONNECTOR, USB TYPE B, RIGHT ANGLE PCB MOUNT	FCI, 61729-0010BLF
35	1	J9	HEADER, 2X5, 0.100	SAMTEC, TSW-105-07-L-D
36	2	J10, J11	CONNECTOR, HSMC	SAMTEC, ASP-122952-01

PARTS LIST

ITEM	QTY	REFERENCE	PART DESCRIPTION	MANUFACTURER/PART NUMBER
37	6	L1, L2, L3, L4, L6, L7	FERRITE BEAD, 33Ω AT 100mHz, 1206	MURATA, BLM31PG330SN1L
38	1	L5	INDUCTOR, 2.2µH, 20% HIGH CURRENT, SMT	VISHAY, IHLP2020BZER2R2M11
39	1	L8	INDUCTOR, CERAMIC CHIP, 1nH, 5%, 0402	COILCRAFT, 0402CS-1N0XJLU
40	1	L9	FERRITE BEAD, 30Ω AT 100mHz, 0805	TDK, MPZ2012S300A
41	1	L10	INDUCTOR, 6.8µH, 20% HIGH CURRENT, SMT	VISHAY, IHLP2020BZER6R8M11
42	2	MTG5, MTG6	STANDOFF, NYLON 0.5"	KEYSTONE, 8833 (SNAP ON)
43	2	Q1, Q2	TRANSISTOR, N-CH. POWER MOSFET, SOIC 8L	FAIRCHILD, FDS8870
44	6	R1, R2, R3, R13, R17, R30	RES., CHIP, 1k, 1/16W, 5% 0402	VISHAY, CRCW04021K00JNED
45	1	R4	RES., CHIP, 4.7k, 1/16W, 5% 0402	YAGEO, RC0402JR-074K7L
46	4	R5, R14–R16	RES., CHIP, 10k, 1/16W, 5% 0402	YAGEO, RC0402JR-0710KL
47	2	R6, R8	RES., CHIP, 2k, 1/16W, 5% 0402	VISHAY, CRCW04022K00JNED
48	0	R7, R10, R23, R24, R25, R27, R28, R36, R37, R38, R39, R43, R62, R63	RES., CHIP, OPT, 0402	OPTION
49	1	R9	RES., CHIP, 39Ω, 1/16W, 1% 0402	VISHAY, CRCW040239R0FKED
50	1	R11	RES., CHIP, 0Ω JUMPER, 1/16W, 0402	VISHAY, CRCW04020000Z0ED
51	1	R12	RES., CHIP, 12k, 1/16W, 5% 0402	VISHAY, CRCW040212K0JNED
52	1	R18	RES., CHIP, 2.2k, 1/16W, 5% 0402	VISHAY, CRCW04022K20JNED
53	2	R19, R20	RES., CHIP, 3.24k, 1/16W, 1% 0402	VISHAY, CRCW04023K24FKED
54	1	R21	RES., CHIP, 1k, 1/16W, 1% 0402	YAGEO, RC0402FR-071KL
55	1	R22	RES., CHIP, 7.15k, 1/16W, 1% 0402	VISHAY, CRCW04027K15FKED
56	2	R26, R29	RES., CHIP, 49.9Ω, 1/6W, 1% 0201	VISHAY, CRCW020149R9FNED
57	7	R31-R35, R41, R42	RES., CHIP, 10Ω, 1/16W, 1% 0402	VISHAY, CRCW040210R0FKED
58	10	R40, R44, R46, R47, R48, R57, R58, R59, R60, R61	RES., CHIP, 50Ω, HIGH FREQ., 1/20W, 0.1% 0402	VISHAY, FC0402E50R0BST1
59	1	R45	RES., CHIP, 499Ω, 1/16W, 1% 0402	VISHAY, CRCW0402499RFKED
60	1	R49	RES., CHIP, 41.2k, 1/10W, 1% 0603	VISHAY, CRCW060341K2FKEA
61	1	R50	RES., CHIP, 309k, 1/10W, 1% 0603	VISHAY, CRCW0603309KFKEA
62	1	R51	RES., CHIP, 243k, 1/10W, 1% 0603	VISHAY, CRCW0603243KFKEA
63	1	R52	RES., CHIP, 50Ω, 1/8W, 5% 0603	VISHAY, FC0603E50R0JST1
64	1	R53	RES., CHIP, 560Ω, 1/10W, 5% 0603	VISHAY, CRCW0603560RJNEA
65	1	R54	RES., CHIP, 10k, 1/10W, 1% 0603	VISHAY, CRCW060310K0FKEA
66	2	R55, R56	RES., CHIP, 20Ω, 1/16W, 1% 0402	VISHAY, CRCW040220R0FKED
67	1	T1	TRANSFORMER, BALUN	ANAREN, B0430J50100AHF
68	1	U2	IC, USB TO MULTIPURPOSE UART/FIFO, TQFP	FTDI, FT2232HL
69	1	U3	IC, QUAD MUX/DEMUX, TSSOP-16	FAIRCHILD, FST3257MTCX
70	1	U4	IC, EEPROM 1kBIT 3MHZ, 8TSSOP	MICROCHIP, 93LC46C-I/ST
71	1	U5	IC, MICROPOWER REGULATOR, SO-8	LINEAR TECHNOLOGY, LT1763CS8-3#PBF
72	2	U6, U7	IC, MICROPOWER REGULATOR, SO-8	LINEAR TECHNOLOGY, LT1763CS8-3.3#PBF
73	1	U8	IC, BUCK REGULATOR, QFN	LINEAR TECHNOLOGY, LT8614IUDC#PBF
74	1	U9	IC, VOLTAGE REFERENCE, MSOP	LINEAR TECHNOLOGY, LTC6655CHMS8-2.048#PBF

PARTS LIST

ITEM	QTY	REFERENCE	PART DESCRIPTION	MANUFACTURER/PART NUMBER
75	2	U10, U11	I.C., LOW DROPOUT REGULATOR, 3×3mm, DFN	LINEAR TECHNOLOGY, LT3080EDD#PBF
76	1	U12	I.C., 80V IDEAL DIODE, DFN-6L	LINEAR TECHNOLOGY, LTC4359HDCB-#TRPBF
77	2	XJP1, XJP2	SHUNT, 2mm	SAMTEC, 2SN-BK-G
78	1	Y1	CRYSTAL, 12.0 MHz, SMT	ABRACON, ABMM2-12.000MHZ-E2-T
DC2085A-A Required Circuit Components				
1	1		GENERAL BOM	DC2085A
2	1	U1	IC, 16-BIT 2.5Gsps DAC	LINEAR TECHNOLOGY, LTC2000IY-16
DC2085A-B Required Circuit Components				
1	1		GENERAL BOM	DC2085A
2	1	U1	IC, 14-BIT 2.5Gsps DAC	LINEAR TECHNOLOGY, LTC2000IY-14
DC2085A-C Required Circuit Components				
1	1		GENERAL BOM	DC2085A
2	1	U1	IC, 11-BIT 2.5Gsps DAC	LINEAR TECHNOLOGY, LTC2000IY-11
DC2085A-D Required Circuit Components				
1	1		GENERAL BOM	DC2085A
2	1	U1	IC, 16-BIT 2.7Gsps DAC	LINEAR TECHNOLOGY, LTC2000AIY-16
DC2085A-E Required Circuit Components				
1	1		GENERAL BOM	DC2085A
2	1	U1	IC, 14-BIT 2.7Gsps DAC	LINEAR TECHNOLOGY, LTC2000AIY-14
DC2085A-F Required Circuit Components				
1	1		GENERAL BOM	DC2085A
2	1	U1	IC, 11-BIT 2.7Gsps DAC	LINEAR TECHNOLOGY, LTC2000AIY-11

CUSTOMER NOTICE

LINEAR TECHNOLOGY HAS MADE A BEST EFFORT TO DESIGN A CIRCUIT THAT MEETS CUSTOMER-SUPPLIED SPECIFICATIONS; HOWEVER, IT REMAINS THE CUSTOMER'S RESPONSIBILITY TO VERIFY PROPER AND RELIABLE OPERATION IN THE ACTUAL APPLICATION. COMPONENT SUBSTITUTION AND PRINTED CIRCUIT BOARD LAYOUT MAY SIGNIFICANTLY AFFECT CIRCUIT PERFORMANCE OR RELIABILITY. CONTACT LINEAR TECHNOLOGY APPLICATIONS ENGINEERING FOR ASSISTANCE.

THIS CIRCUIT IS PROPRIETARY TO LINEAR TECHNOLOGY AND SUPPLIED FOR USE WITH LINEAR TECHNOLOGY PARTS.

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged**.

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
