

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# QUICK START GUIDE FOR DEMONSTRATION CIRCUIT DC455

## HIGH EFFICIENCY DUAL PHASE 2-OUTPUT POWER SUPPLY

### LTC3707EGN

## DESCRIPTION

Demonstration circuit DC455 is a dual output, step-down, synchronous buck converter featuring the 150kHz to 300kHz LTC3707EGN controller. This controller can operate with input voltages from 7V to 21V. Output 1 is

5V with loads up to 5A and output 2 is 3.3V with loads up to 5A. **Design files for this circuit board are available. Call the LTC factory.**

**Table 1. Performance Summary**

PARAMETER	CONDITION	VALUE
Minimum Input Voltage		7V
Maximum Input Voltage		21V
V <sub>OUT1</sub>	V <sub>IN</sub> = 7V to 21V, I <sub>OUT1</sub> = 0A to 5A	5V%
V <sub>OUT2</sub>	V <sub>IN</sub> = 7V to 24V, I <sub>OUT1</sub> = 0A to 5A	3.3V%
Switching Frequency	Jumper selectable	150kHz–300kHz

## QUICK START PROCEDURE

Demonstration circuit DC455 is easy to set up to evaluate the performance of the LTC3707EGN. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

**NOTE:** When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the Vin or Vout and GND terminals. See Figure 2 for proper scope probe technique.

1. With the power off, place the jumpers as shown in Figure 1.
2. Connect the desired loads to Vout1 and Vout2. The loads can be as high as 5A for Vout1 and 5A for Vout2. Pre-set the load current to 0A.
3. Set Vin to 7V (recommended). The rated input voltage range is 7V to 21V.

4. Switch on the Vout1 channel by removing the RUN1 jumper. Vout1 should be 5V ±0.1V.
5. Increase the load current of Vout1 to 5A. At 7V input voltage, the input current should be less than 4A. Slowly increase the input voltage up to 21V. At 21V input voltage, the input current should be less than 1.5A.
6. Decrease Vout1 load current to 0A. Reduce the input voltage to 7V. Switch on the Vout2 channel by removing the RUN2 jumper. The output voltage of Vout2 should be 3.3V ±0.05V.
7. Increase the load current of Vout2 to 5A. At 7V input, the input current should be less than 3A. Slowly increase the input voltage to 21V. At 21V input, the input current should be less than 1.0A.
