

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Gravity: I2C SD2405 RTC Module SKU: DFR0469

Introduction

We're glad to introduce a new member in Gravity family: Gravity I2C SD2405 RTC module. This is an extremely accurate I2C real-time clock (RTC) with crystal compensation, inner chargeable battery. The SD2405AL is available in industrial temperature ranges.

The SD2405AL is dual power supply system. When the primary power supply goes down to an assigned value or resumes from low power, the system can switch between the primary power supply and battery automatically. Even there is no external power, it can still work for 5~8 years, 1uA ultra-low power consumption (inner battery, $T_a=25^{\circ}\text{C}$).

The SD2405AL can generate various periodic interrupt clock pulses lasting for long period (one year), and three alarm interrupts can be made by year, month, date, days of the week, hours, and minutes, seconds. It also provides a selectable 32.768KHz~1Hz clock output for an external MCU. The product incorporates a time trimming circuit that adjusts the clock with higher precision by adjusting any errors in crystal oscillator frequencies based on signals from the CPU. A 12-bytes general SRAM is implemented in the SD2405AL.

Gravity SD2405 RTC can work as data logger, timer alarm clock and other time application. It is an ideal choice for timing project.

Specification

- Operation voltage range:3.3V~5.5V.
- Low-power:typical 1uA (inner battery, Ta=25°C)
- Timing Range: To 2099 (with leap year compensation)
- Accuracy $\pm 5\text{ppm}$ from -40°C to $+85^\circ\text{C}$.
- Fast (400kHz) I2C Interface(4.5~5.5V).
- Real-Time Clock Counts Seconds, Minutes,Hours, Day, Date, Month, and Year with Leap Year Compensation Valid Up to 2100.
- Time-of-Year,Month,Day,Week,Hour,Minute,Second Alarms.
- Programmable Square-Wave Output:32768hz,4096hz...1hz..1/16hz.
- Countdown timer interrupt.
- High precision time trimming circuit.
- 12-hour/24-hour time display selectable
- Dimension: 35.50 * 22.00(mm)/1.4 * 0.87 inches
- Weight: 6g

Board Overview

Gravity: I2C SD2405 RTC Module

Num	Label	Description
1	Gravity Interface	SDA: IIC Data SCL: IIC Clock GND: GND VCC: 3.3~5V
2	XH2.54 Pins	SDA: IIC Data SCL: IIC Clock GND: GND VCC: 3.3~5V INT: Interrupt

Tutorial

In this tutorial, you can set and read time.

Requirements

- **Hardware**
DFRduino UNO (or similar) x 1
Gravity: I2C SD2405 RTC Module
M-M/F-M/F-F Jumper wires
- **Software**
Arduino IDE, Click to Download Arduino IDE from Arduino®
<https://www.arduino.cc/en/Main/Software%7C>

Connection Diagram

Gravity: I2C SD2405 RTC Module Arduino Connection Diagram

Sample Code

Please download Arduino RTC library. How to install Libraries in Arduino IDE
<https://github.com/DFRobot/Gravity-I2C-SD2405-RTC-Module/raw/master/GravityRtc.zip>
<https://www.arduino.cc/en/Guide/Libraries#.UxU8mdzF9H0%7C>

Note: //rtc.initRtc(2017,6,19,1,12,7,0); //Set Time: 2017/June/19th/Monday/12:07:0 am. Please comment it after you have set time successfully!!!!!!

```
#include "GravityRtc.h"
#include "Wire.h"

GravityRtc rtc;    //RTC Initialization

void setup() {
  Serial.begin(9600);
  rtc.setup();

  //rtc.initRtc(2017,6,19,1,12,7,0); //Set Time: 2017/June/19th/Monday/12:07
:0 am
  //Please comment it after you have set time successfully!!!!!!
}

void loop() {
  rtc.update();
  //*****Time*****
  Serial.print("  Year = "); //year
  Serial.print(rtc.year);
  Serial.print("  Month = "); //month
  Serial.print(rtc.month);
  Serial.print("  Day = "); //day
  Serial.print(rtc.day);
  Serial.print("  Week = "); //week
```

```

Serial.print(rtc.week);
Serial.print("  Hour = "); //hour
Serial.print(rtc.hour);
Serial.print("  Minute = "); //minute
Serial.print(rtc.minute);
Serial.print("  Second = "); //second
Serial.println(rtc.second);
delay(1000);
}

```

Expected Results

```

Year = 2017 Month = 6 Day = 19 Week = 1 Hour = 16 Minute = 52 Second = 0
Year = 2017 Month = 6 Day = 19 Week = 1 Hour = 16 Minute = 52 Second = 1
