

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

64x64 RGB LED Matrix Panel (3mm pitch) SKU:DFR0499

INTRODUCTION

City night is always beautiful. She is just like a charming girl, showing her beauty every time. The colorful light is jewelry, dotted on her dress.

This is a 64x64 RGB LED Matrix Panel, it has 4096 full-color RGB LEDs in all. Each LED can be independently addressed and controlled. It requires at least 13 digital GPIOs to control the LED matrix. So the UNO board won't be a good choice in this application, recommended Mega 2560, Raspberry Pi and the other kinds of microcontroller with large RAM and high speed.

The led matrix has 2 IDC connectors (DATA_IN, DATA_OUT) on the back, you can cascade multiple panels and make a huge screen together. BUT Arduino doesn't support this function, its speed is not enough to multiple panel. What's more, it is a high brightness, long life, no pollution, pure color LED display module. It can be used both indoor and outdoor, safety and stability, the module can not be mutually extrusion deformation, also can be used normally in harsh environment.

Note: This panel needs a 5V@5A power supply.

SPECIFICATION

- Operating voltage: DC 5V
- Average power consumption: <500W/m²
- Maxim Power Consumption: <1000w/m²
- Pixel: 64x64=4096
- Level of viewing Angle: $\geq 160^\circ$
- Control mode: Synchronous control
- Drive mode: 1/16 scan rate
- Repetition frequency: $\geq 60\text{Hz}$
- White Balance Brightness: $\geq 1200\text{cd/m}^2$
- Refresh frequency : $\geq 300\text{Hz}$
- MTTF: ≥ 5000 hours
- Service Life: 75000~100000 hours
- Pixel pitch: 3mm
- Dimension: 190 * 190 * 14.5 mm / 7.48 * 7.48 * 0.57 inches
- Thickness: 11mm

SHIPPING LIST

- 64x64 RGB LED Matrix Panel (3mm pitch) x1
- IDC to XH2.54 cable x1
- IDC to IDC cable x1
- Power supply cable x1

Board Overview

Note : The pin order of DATA-IN and DATA-OUT is same, POWER SUPPLY 5V.

DATA-IN and DATA-OUT		
Label	Name	Function
1	DR1	High R data
2	DG1	High G data
3	DB1	High B data
4	GND	GND
5	DR2	Low R data
6	DG2	Low G data
7	DB2	Low B data
8	GND	GND
9	A	A line selection
10	B	B line selection

11	C	C line selection
12	D	D line selection
13	CLK	CLOCK
14	LAT	LATCH
15	OE	Output Enable
16	GND	GND
POWER		
Label	Name	Function
1	VCC	5V
2	VCC	5V
3	GND	GND
4	GND	GND

Tutorial

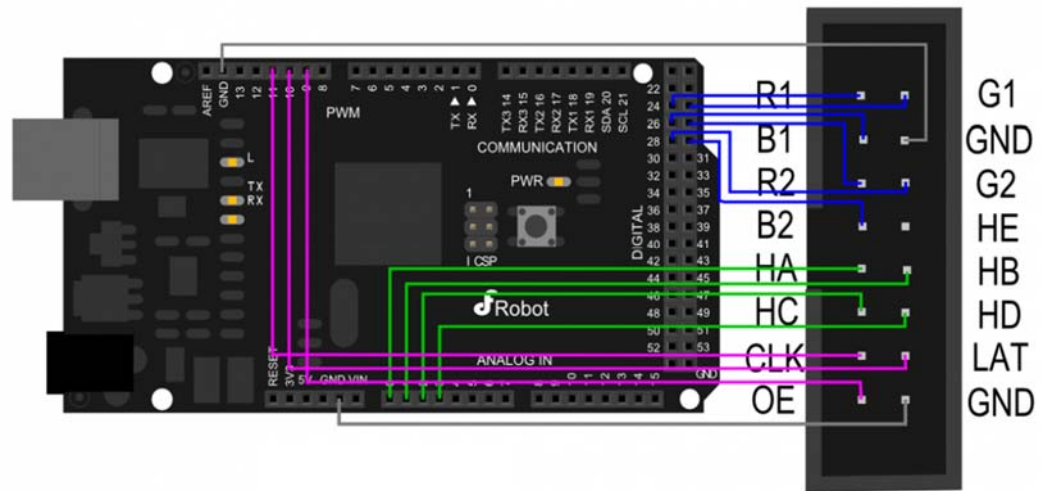

According to the pinout to connect, then upload the code to Mega2560, you will be able to see a beautiful display effect.

Requirements

- **Hardware**
DFRduino Mega R3 x1
DFR0471 x1
DuPont cables
- **Software**
Arduino IDE [Click to Download Arduino IDE from Arduino®](https://www.arduino.cc/en/Main/Software)

<https://www.arduino.cc/en/Main/Software%7C>

Connection Diagram

DFR0499 Connection Diagram

Note: It needs an external power supply, the USB is only 5V@500mA, not enough power to drive the screen

Sample Code 1

Please download DFRobot_RGBMatrix library first

https://github.com/DFRobot/DFRobot_RGBMatrix

```
#include <DFRobot_RGBMatrix.h> // Hardware-specific library
#include <Wire.h>

#define OE    9
#define LAT   10
#define CLK   11
#define A     A0
#define B     A1
#define C     A2
#define D     A3
#define E     A4

#define WIDTH 64
#define HIGH  64

int a=0;

int b=16;

DFRobot_RGBMatrix matrix(A, B, C, D, E, CLK, LAT, OE, false, WIDT
H, HIGH);
```

```

void setup()
{
  matrix.begin();
  // fill the screen with 'black'
  matrix.setTextSize(1);      // size 1 == 8 pixels high
  matrix.fillScreen(matrix.Color333(0, 0, 0));
  delay(500);
}

void loop()
{  byte i;
   if(a<=-64)
{a=64;
  }
  if(b<=-48)
{b=80;
  }
  matrix.fillScreen(0); //clear the screen
  matrix.setTextSize(2); //Set as 16*16 pixel
  matrix.setCursor(15, a); // start at top left, with 8 pixel
of spacing
  matrix.setTextColor(matrix.Color333(4, 0, 4)); //
  matrix.println("DFR"); //
  matrix.setTextSize(1); //Set as 8*8 pixel
  matrix.setCursor(12, b);
  matrix.println("DFROBOT");
  matrix.setTextSize(1);
  matrix.print("Let's join hands with each other to create a future"
);
  delay(600);
  a=a-6;
  b=b-6;
}

```

Sample Code 2

Click to download the library Adafruit-GFX-Library. RGB-matrix-Panel. How to install the library?

https://github.com/DFRobot/DFRobot_RGBMatrix

https://github.com/DFRobot/DFRobot_RGBMatrix
