imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

General Description

The DG202/DG212 are normally open, quad singlepole single-throw (SPST) analog switches. These CMOS switches can be continuously operated with power supplies ranging from ± 4.5 V to ± 18 V. Maxim guarantees that these switches will not latch up if the power supplies are disconnected with input signals still connected.

The DG202/DG212 are similar to the DG201/DG211 except for inverted control inputs. All devices have guaranteed break-before-make switching, as well as essentially constant on-resistance over the analog signal range. All switches conduct current in either direction and add no offset to the output signal.

Compared to the original manufacturer's products, Maxim's DG202/DG212 consume very little power, making them better suited for portable applications. Maxim has also eliminated the need for the third logic power supply (V_L) that is required for the operation of the original manufacturer's DG212 without sacrificing compatibility.

Analog Multiplexers Programmable Gain Amplifiers Communications Systems Sample/Holds Automatic Test Equipment PBX, PABX

Typical Operating Circuit

Applications

Maxim Integrated Products 1

For pricing, delivery, and ordering information, please contact Maxim/Dallas Direct! at 1-888-629-4642, or visit Maxim's website at www.maxim-ic.com.

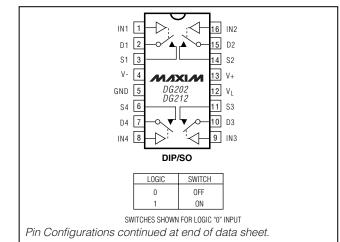

_Features

- Guaranteed ±4.5V to ±18V Operation
- No V_L Supply Required
- Nonlatching with Supplies Turned Off and Input Signals Present
- CMOS and TTL Logic Compatible
- Monolithic, Low-Power CMOS Design

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
DG202CUE	0°C to +70°C	16 TSSOP
DG202CSE	0°C to +70°C	16 SO
DG202CJ	0°C to +70°C	16 Plastic DIP
DG202C/D	0°C to +70°C	Dice
DG202AEGE	-40°C to +85°C	16 QFN (5mm x 5mm)
DG202AEUE	-40°C to +85°C	16 TSSOP
DG202ADY	-40°C to +85°C	16 SO
DG202ADJ	-40°C to +85°C	16 Plastic DIP
DG202AK	-55°C to +125°C	16 CERDIP
DG212CUE	0°C to +70°C	16 TSSOP
DG212CSE	0°C to +70°C	16 SO
DG212CJ	0°C to +70°C	16 Plastic DIP
DG212C/D	0°C to +70°C	Dice
DG212EGE	-40°C to +85°C	16 QFN (5mm x 5mm)
DG212EUE	-40°C to +85°C	16 TSSOP
DG212DY	-40°C to +85°C	16 SO
DG212DJ	-40°C to +85°C	16 Plastic DIP
DG212ETE	-40°C to +85°C	16 Thin QFN

Pin Configurations

ABSOLUTE MAXIMUM RATINGS (DG212)

V+ to V	44V
VIN to Ground	V-, V+
V _L to Ground	0.3V, 25V
V_S or V_D to V+	0, -40V
V _S or V _D to V	0, 40V
V+ to Ground	25V
V- to Ground	25V
Current, Any Terminal Except S or D	
Continuous Current, S or D	20mA
Peak Current, S or D	
(pulsed at 1ms 10% duty cycle max)	70mA
Storage Temperature Range65	°C to +125°C

Note 1: Device mounted with all leads soldered to PC board.

Operating Temperature Range
DG212C0°C to +70°C
DG212D/E40°C to +85°C
Power Dissipation ($T_A = +70^{\circ}C$) (Note 1)
16-Pin Plastic Dip (derate 10.5mW/°C above +70°C)842mW
16-Pin Narrow SO (derate 8.7mW/°C above+70°C)696mW
16-Pin TSSOP (derate 9.4mW/°C above +70°C)
16-Pin QFN (5mm x 5mm)
(derate 19.2mW/°C above +70°C)1538mW
16-Pin Thin QFN
(derate 14.7mW/°C above +70°C)1177mW

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS (DG212)

 $(V + = +15V, V - = -15V, GND = 0, T_A = +25^{\circ}C, unless otherwise noted.)$ (For more information on TYP values see Note 2.)

Pin Description

PI	N	NAME	FUNCTION				
DIP/SO/TSSOP	QFN/TQFN		FUNCTION				
1, 16, 9, 8	15, 14, 7, 6	IN1–IN4	Input				
2, 15, 10, 7	16, 13, 8, 5	D1-D4	Analog Switch Drain Terminal				
3, 14, 11, 6	1, 12, 9, 4	S1–S4	Analog Switch Source Terminal				
4	2	V-	Negative-Supply Voltage Input				
5	3	GND	Ground				
12	10	N.C.	No Connection				
13	11	V+	Positive-Supply Voltage Input—Connected to Substrate				
	EP	EP	Exposed Pad. Connect exposed pad to V+ or leave EP unconnected.				

Switching Time Test Circuit

Switch output waveform shown for V_S = constant with logic input waveform as shown. Note that V_S may be +ve or -ve as per switching times test circuit. V_O is the steady state output with switch on. Feedthrough via gate capacitance may result in spikes at leading and trailing edge of output waveform.

Protecting Against Fault _____Conditions

Fault conditions occur when power supplies are turned off when input signals are still present, or when overvoltages occur at the inputs during normal operation. In either case, source-to-body diodes can be forward biased and conduct current from the signal source. If DG202/DG212

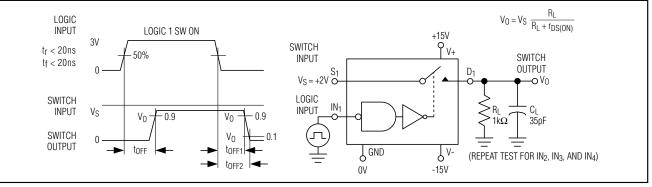

Figure 1. Switching Time

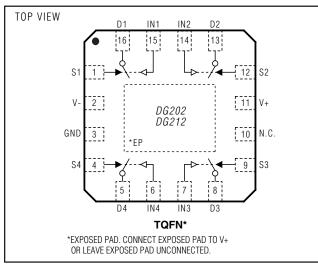

Typical RDS(ON) vs. Power Supplies for Maxim's DG202, and DG212

POWER SUPPLIES		R	DS(ON) AT ANAL	OG SIGNAL LEVE	iL	
POWER SUPPLIES	-5V	+5V	-10V	+10V	-15V	+15V
±5V	350Ω	380Ω	—	_	_	—
±10V	—	—	165Ω	250Ω	_	—
±15V		—	125Ω	160Ω	135Ω	155Ω

this current is required to be kept to low (μ A) levels then the addition of external protection diodes is recommended.

To provide protection for overvoltages up to 20V above the supplies, a 1N4001 or 1N914 type diode should be placed in series with the positive and negative supplies as shown in Figure 2. The addition of these diodes will reduce the analog signal range to 1V below the positive supply and 1V above the negative supply.
