## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# TTL Compatible CMOS Analog Switches 

#### Abstract

General Description Maxim's DG300-DG303 and DG300A-DG303A CMOS dual and quad analog switches combine low power operation with fast switching times and superior DC and AC switch characteristics. On-resistance is less than $50 \Omega$ and is essentially constant over the analog signal range. Device specifications are ideal for batterypowered circuitry. These switches are available in a variety of formats as outlined in the Pin Configurations section. The switch control logic inputs are fully TTL and CMOS compatible. Also featured are "break-before-make" switching and low charge injection. Maxim's DG300-DG303 and DG300A-DG303A families are electrically compatible and pin compatible with the original manufacturer's devices. All devices operate with power supplies ranging from $\pm 5 \mathrm{~V}$ to $\pm 18 \mathrm{~V}$. Single-supply operation is implemented by connecting V - to GND.

## Applications

Portable Instruments
Low-Power Sample/Holds
Power-Supply Switching
Programmable Gain Amplifiers
SPDT and DPDT Functions
Process Control and Telemetry

Features

- Monolithic Low-Power CMOS
- Latchup Proof Construction
- Fully Compatible 2nd Source
- Low On-Resistance, <50
- Fast Switching Time
- V+ to V- Analog Signal Range
- Single-Supply Capability

Ordering Information

## TTL Compatible CMOS Analog Switches

## ABSOLUTE MAXIMUM RATINGS

Voltages Referenced to V-
V+ (DG300-DG303)..............................................................36V
V+ (DG300A-DG303A) ........................................................... 44 V
GND .....................................................................................25V
Digital Inputs, $\mathrm{V}_{\mathrm{S}}, \mathrm{V}_{\mathrm{D}}$, (Note 1)....................... 4 V to ( $\mathrm{V}++4 \mathrm{~V}$ ) or
30 mA , whichever occurs first
Current, Any Terminal Except S or D................................... 30 mA
Continuous Current, S or D................................................ 30 mA
(pulsed at $1 \mathrm{~ms}, 10 \%$ duty cycle max) .......................... 100 mA
Storage Temperature (A \& B suffix)...
$-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
(C suffix) $\qquad$ $-65^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS (Over Temperature) (continued)

$\left(\mathrm{V}+=+15 \mathrm{~V}, \mathrm{~V}-=-15 \mathrm{~V}, \mathrm{GND}=0 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=\right.$ Over Temperature Range, unless otherwise noted.)

Note 1: Signals on $S_{X}$, $D_{X}$, or $I N_{X}$ exceeding $V+$ or $V$ - are clamped by internal diodes. Limit diode forward current to maximum current ratings.
Note 2: The algebraic convention whereby the most negative value is a minimum, and the most positive value is a maximum is used in this data sheet.
Note 3: Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
Note 4: $O F F-$ isolation $=20 \log \frac{V_{S}}{V_{D}}, V_{S}=$ input to $O F F$ switch, $V_{D}=$ output.
Typical Operating Characteristics

## Applications Information

All DG300 family switches will operate with $\pm 5 \mathrm{~V}$ to $\pm 15 \mathrm{~V}$ power supplies. They can also be used with single-ended power supplies ranging from +10 V to +30 V where the V terminal is connected to ground. In either case, analog signals ranging from $\mathrm{V}+$ to V - can be switched.
The on-resistance variation with analog signal and supply voltage is shown in the Typical Operating Characteristics. The temperature coefficient of RON is typically $0.5 \% /{ }^{\circ} \mathrm{C}$. Typical on-resistance matching from channel to channel is $10 \%$. In addition, Table 1 outlines some typical parameters for single-supply operation.

Table 2. Charge Injection ( $\pm 15 \mathrm{~V}$ Supplies)

| ANALOG INPUT (V) | INJECTED Q (pC) |
| :---: | :---: |
| +10 | 4 |
| +5 | 8 |
| 0 | 12 |
| -5 | 8 |
| -10 | 5 |

The charge injection test circuit is shown in Figure 1. Table 2 lists the typical injected charge for DG300 series switches with various input voltages.
