Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

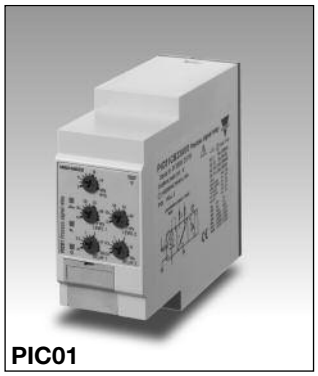
Monitoring Relays
1-Phase True RMS AC/DC Over and Under Current
Types DIC01, PIC01

DIC01



PIC01

- **TRMS AC/DC over + under, over+over, under+under current and voltage monitoring relays**
- **DC process signal plus/minus monitoring relay (DIC01)**
- **Selection of measuring range by DIP-switches**
- **Adjustable current and voltage on relative scale**
- **Adjustable hysteresis on relative scale**
- **Separately adjustable delay functions (0.1 to 30 s)**
- **Programmable latching or inhibit at set level**
- **Output: 1 or 2 x 8 A SPDT relay N.D. or N.E. selectable**
- **For mounting on DIN-rail in accordance with DIN/EN 50 022 (DIC01) or plug-in module (PIC01)**
- **45 mm Euronorm housing (DIC01) or 36 mm plug-in module (PIC01)**
- **LED indication for relay(s), alarm and power supply ON**
- **Galvanically separated power supply**

Product Description

DIC01 and PIC01 are precise TRMS AC/DC over+under, over+over or under+under current and voltage (selectable by DIP-switch) monitoring relays. DIC01 can perform also DC plus/minus measurement by short circuiting pins Z3 and Y1. The devices can be connected to the MI or MP and A82 or E83 current transformers.
Both relays have two individual set levels with their own time delay. Only for DIC01 each set level can work with a single SPDT relay.
Owing to the built-in latch function, the ON-position of the relay output can be maintained. Inhibit function can be used to avoid relay operation when not desired (maintenance, transitions).
The LED's indicate the state of the alarm and the output relays.

Mode of Operation

DIC01 and PIC01 monitor both AC and DC current and voltage. DIC01 can also monitor positive and negative DC voltage connecting terminals Y1 and Z3.

Example 1
(no contact input - under+over voltage - 2 x SPDT N.D. relays (1 x SPDT for PIC01) - TRMS)
DIC01: One relay operates when the voltage drops below the under voltage set point for more than the respective delay time. It releases when the voltage exceeds the set level plus the set hysteresis. The other relay operates when the voltage exceeds the over voltage set point for more than the respective delay time. It releases when the voltage drops below the set level minus hysteresis.

PIC01: The relay operates when the voltage drops below the under voltage set level for more than the respective set delay time or when it exceeds the over voltage set level for more than the relative set delay time. The relay releases when the voltage exceeds the under voltage set level plus hysteresis and it drops below the over voltage set level minus hysteresis (the hysteresis is the same for both set levels).

Example 2
(latch enable active - under+under current - 2 x SPDT relays (1 x SPDT for PIC01) - TRMS)
DIC01: Each relay operates and latches when the current drops below the respective set level for more than the respective delay time. Provided that the current has exceeded the respective set level plus hysteresis, each relay releases when the contact input's connection is interrupted.

PIC01: The relay operates when the current drops below the higher set level for more than the respective delay time. Provided that the current has exceeded the higher set level plus hysteresis the relay releases when the contact input's connections is interrupted.

Note
Different delay times can be used for appropriate reaction according to the set points.

Example 3
(inhibit enable active - over+over current with MI CT - DPDT relay (SPDT for PIC01) - TRMS)
Provided that the contact input's connection is interrupted, the relay operates when the current flowing in the MI CT exceeds the lower set level for more than the respective delay time. It releases when the current drops below the lower set level minus hysteresis or when the contact input's pins are connected.

Example 4
(inhibit enable active - over+over current with A82-10 CT - DPDT relay (1 x SPDT for PIC01) - TRMS
Provided that the contact input's connection is interrupted, the relay operates when the current flowing in the A82-10 CT exceeds the lower set level for more than its delay time. It releases when the current drops below the lower set level minus hysteresis or when the contact input's pins are connected.

Example 5 (DIC01 only)
(no contact input - under+over voltage - 2 x SPDT N.D. relays - plus/minus DC
One relay operates when the voltage drops below the under voltage set point for more than the respective delay time. It releases when the voltage exceeds the set level plus the set hysteresis. The other relay operates when the voltage exceeds the over voltage set point for more than the respective delay time. It releases when the voltage drops below the set level minus hysteresis.

In this case the spare front label has to be placed on the device for proper level adjustment.

Note
When the inhibit contact is opened, if the input signal is already in alarm position, the delay time needs to elapse before relay(s) activation.

Function/Range/Level and Time Delay Setting

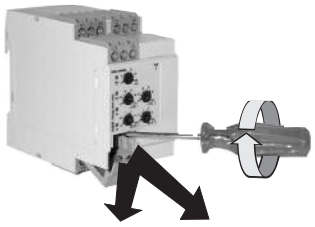
Adjust the input range setting the DIP switches 1 and 2 of the main black selector as shown below.
Select the desired function setting the DIP switches 3 to 6 of the black selector and 1, 2 of the small red selector as shown below.
To access the DIP switches open the grey plastic cover as shown below
The selection between current and voltage is automatically selected through the input connectors.
TRMS or positive/negative DC monitoring selectable by short-circuiting terminals Y1 and Z3 (DIC01 only).

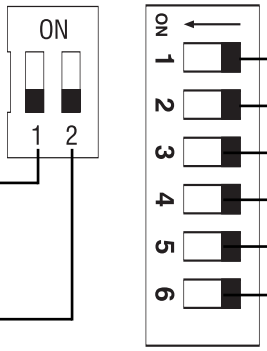
Selection of level, time delay and hysteresis:

Upper knob:
Setting of hysteresis on relative scale: 0 to 30% on set value.

Centre knobs:
Current level setting on relative scale: 10 to 110% on full scale.

Lower knobs:
Setting of delay on alarm time on absolute scale (0.1 to 30 s).





Measuring range (depending on connections)

		SW1	ON	ON	OFF
Connect	Input term.	SW2	OFF	ON	ON
None	DIC01: Y1,Y2 PIC01: 5,7		0.5 to 5 mA AC/DC	2 to 20 mA AC/DC	None
Y1 to Z3	DIC01: Y1,Y2		-5 to +5 mA DC	-20 to +20 mA DC	None
None	DIC01: Y1,Y3 PIC01: 6,7		0.1 to 1V AC/DC	4 V_p	1 to 10 V AC/DC

OFF: Normally Energized (NE)

Power ON delay
ON: 6 s ± 0.5 s
OFF: 1 s ± 0.5 s

Contact input
ON: Latch function enable
OFF: Inhibit function enable

Set Point 1 (SP1) monitoring function
ON: Over current or voltage
OFF: Under current or voltage

Set Point 2 (SP2) monitoring function
ON: Over current or voltage
OFF: Under current or voltage

Relay(s) coupling
ON: 2 x SPDT (DIC01 only)
OFF: 1 x DPDT (DIC01, PIC01)
