Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

F1 PSMC 28-Pin Evaluation Platform

Quick Start Guide

Overview

The F1 PSMC 28-Pin Evaluation Platform is programmed at the factory with a test program. The board does not need to be configured in any way in order to verify that the F1 PSMC 28-Pin Evaluation Platform is working. Once the board is powered up, the red LED (D2) will be illuminated by the PSMC output. The green LED (D1) is powered as long as the PIC16F1783 device is operating.

Board Setup

There is no setup for this demo board to operate.

Board Power-Up

Supplying power to the board is done in the following way:

- Use the 5-volt power setting supplied by the PICkit™ 3 or MPLAB™ ICD 3 programmers.

Board Layout

The F1 PSMC 28-Pin Evaluation Platform schematic is shown in Figure 1.
A PIC16F1783 microcontroller is populated on the top center of the demo board under the identification label U1. The PIC16F1783 has 15 available I/O pins that can be utilized using connectors P1 and P2.
Should you choose to use the board to experiment on your own, the board allows the flexibility to do so. A prototyping area is provided, with ground (GND) and supply voltage (V_{DD}) connections on the left and right sides of the board.
The F1 PSMC 28-Pin Evaluation Platform can also be used to drive any of the following F1 Motor Control add-on boards:

- DM164130-2 F1 BLDC Accessory Board
- DM164130-6 F1 BDC Motor Add-On
- DM164130-8 F1 Unipolar Stepper Motor Add-On
- DM164130-7 F1 Bi-Polar Stepper Motor Add-On
