imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Monitoring Relays 3-Phase Sequence and Phase Loss Type DPA53

Product Description

3-Phase relay for detection of incorrect phase sequence and phase loss.

Using the front knob it can be decided the undervoltage setpoint of the unit.

Supply range from 208 to

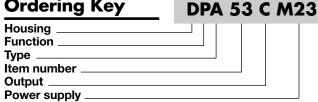

240 VAC and 380 to 480 VAC covered by two multivoltage relays. For mounting on DIN-rail. Housing 17.5 mm wide suitable both for back and front panel mounting.

- 3-phase monitoring relay for phase sequence and phase loss
- · Detects when all phases are present and have the correct sequence

CARLO GAVAZZI

- Knob-adjustable undevoltage detection
- Measures its own power supply
- Power supply range: 208 to 240 and 380 to 480 VAC (±15%)
- Output: 5 A SPDT relay normally energized
- For mounting on DIN-rail in accordance with DIN/EN 50 022
- 17.5 mm DIN-rail housing (DIN 43880)
- LED indication for relay and power supply ON

Mode of Operation

DPA53 monitors its own 3- phase power supply. The relay operates when all the phases are present, the phase sequence is correct and each phase-phase voltage is above the adjusted setpoint. The relay releases when one phase-phase voltage drops below the setpoint or when the phase sequence is incorrect.

Example 1

The relay monitors that the power supply has the correct phase sequence and that all phases are present.

Example 2

The relay releases in case of interruption of one or more phases, provided that the regenerated voltage does not exceed the set voltage.

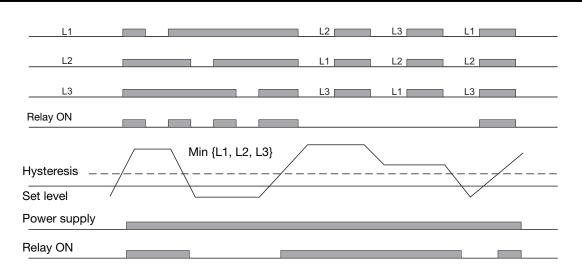

Level setting

Select the proper undervoltage level using the knob according to the phasephase voltage and the needed sensitivity.
