Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

TSYS02D
PERIPHERAL MODULE

Digital Temperature Sensor

General Description

The TSYS02D peripheral module provides the necessary hardware to interface the TSYS02D digital temperature sensor to any system that utilizes Pmod compatible expansion ports configurable for I^2C communication. The TSYS02D sensor is a self-contained temperature sensor that is fully calibrated during manufacture. The sensor can operate from 1.5V to 3.6V. The TSYS02D has a low power stand-by mode for power-sensitive applications.

Specifications

- Measures temperature from -40°C to 125°C
- I^2C communication
- Fully calibrated
- Fast response time
- Very low power consumption

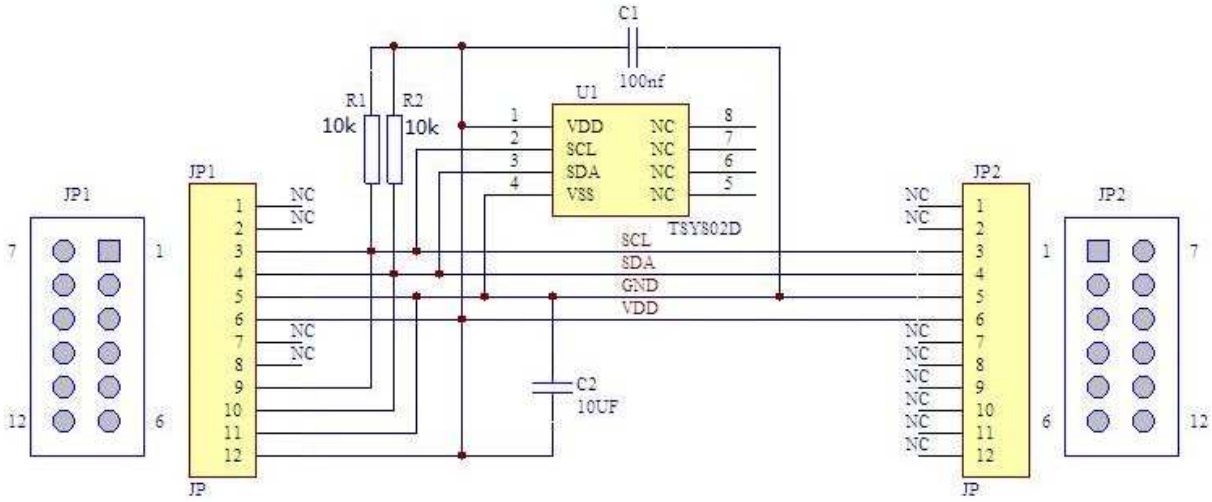
Features

- 12-pin Pmod compatible connector
- I^2C interface
- Secondary 12-pin connector allows daisy chain
- FPGA fabric available for download
- µC C code available for download
- 24/16 bit resolution for temperature
- Parameters stored on chip

Performance

- -5°C to 50°C accuracy: 0.2°C
- -20°C to 100°C accuracy: 0.5°C
- -40°C to 125°C accuracy:1°C
- Very low power consumption
- Operates from 1.5V to 3.6V
- Time constant –4 second typical
- Conversion time – 43 mS typical

Schematic



Connector Pin Assignments (1^2C Communications)

System Plug (Table 1)

Connector J1		
Pin No.	**Signal**	**Description**
1	N/C	Not Connected
2	N/C	Not Connected
3	SCL	I^2C Serial Clock
4	SDA	I^2C Serial Data
5	GND	Ground
6	Vdd	Power Supply
7	N/C	Not Connected
8	N/C	Not Connected
9	SCL	I^2C Serial Clock
10	SDA	I^2C Serial Data
11	GND	Ground
12	Vdd	Power Supply

Expansion Socket (Table 2)

Connector J2		
Pin No.	**Signal**	**Description**
1	N/C	Not Connected
2	N/C	Not Connected
3	SCL	I^2C Serial Clock
4	SDA	I^2C Serial Data
5	GND	Ground
6	Vdd	Power Supply
7	N/C	Not Connected
8	N/C	Not Connected
9	N/C	Not Connected
10	N/C	Not Connected
11	N/C	Not Connected
12	N/C	Not Connected

Detailed Description

I²C Interface

The peripheral module can interface to the host in one of two ways. It can plug directly into a Pmod-compatible port (configured for I²C) through connector J1, or in this case, other I²C boards can attach to the same I²C bus through connector J2.

I²C Interface (Daisy Chaining Modules)

Alternatively, the peripheral module can connect to other I²C-based Pmod modules through the expansion J2 connector. Connector J1 provides connection of the module to the Pmod host. The pin assignments and functions adhere to the Pmod standard as shown in Table 1. The J2 connector allows the module to be connected through a daisy-chain from another I²C module and/or provide I²C and power connections to other I²C modules on the same bus. See Table 2.

External Control Signals

The IC operates as an I²C slave using the standard 2 wire I²C connection scheme. The IC is controlled either by the host (through the Pmod connector). In cases where one or more of the SCL and SDA signals are driven from an external source, resistors R1, R2 provide pull-up. However, this also increases the apparent load to the external driving source. If the external source is *in*capable of driving these loads, they should be removed.

Reference Material

- Refer to the TSYS02D data sheet for detailed information regarding operation of the IC: http://www.meas-spec.com/downloads/xxxxxxxxx.pdf
- The complete software sensor evaluation kit for ZEDBOARD is available at http://www.meas-spec.com/TBD/xxxxx.zip (TSYS02D ZedBoard Driver)
- The complete software sensor evaluation kit for MICROZED BOARD is available at http://www.meas-spec.com/TBD/xxxxx.zip (TSYS02D MicroZed Board Driver)
