

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DS3161/DS3162/DS3163/DS3164

Single/Dual/Triple/Quad

ATM/Packet PHYs for DS3/E3/STS-1

www.maxim-ic.com

GENERAL DESCRIPTION

The DS3161, DS3162, DS3163, and DS3164 (DS316x) integrate ATM cell/HDLC packet processor(s) with DS3/E3 framer(s) to map/demap ATM cells or packets into as many as four DS3/E3 digital lines with DS3-framed, E3-framed, or clear-channel data streams on per-port basis.

APPLICATIONS

Access Concentrators	Multiservice Access Platform (MSAP)
SONET/SDH ADM	
SONET/SDH Muxes	Multiservice Protocol Platform (MSPP)
PBXs	
Digital Cross Connect	ATM and Frame Relay Equipment
Test Equipment	
Routers and Switches	PDH Multiplexer/Demultiplexer
Integrated Access Device (IAD)	

ORDERING INFORMATION

PART	TEMP RANGE	PIN-PACKAGE
DS3161	0°C to +70°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)
DS3161N	-40°C to +85°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)
DS3162	0°C to +70°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)
DS3162N	-40°C to +85°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)
DS3163	0°C to +70°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)
DS3163N	-40°C to +85°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)
DS3164	0°C to +70°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)
DS3164N	-40°C to +85°C	400 TE-PBGA (27mm x 27mm, 1.27mm pitch)

Note: Add the "+" suffix for the lead-free package option.

POS-PHY and POS-PHY Level 3 are trademarks of PMC-Sierra, Inc.

FUNCTIONAL DIAGRAM

FEATURES

- Single (DS3161), Dual (DS3162), Triple (DS3163), or Quad (DS3164) ATM/Packet PHYs for DS3, E3, and Clear-Channel 52Mbps (CC52)
- Pin Compatible for Ease of Port Density Migration in the Same PC Board Platform
- Each Port Independently Configurable
- Universal PHYs Map ATM Cells and/or HDLC Packets into DS3 or E3 Data Streams
- UTOPIA L2/L3 or POS-PHY™ L2/L3 or SPI-3 Interface with 8-, 16-, or 32-Bit Bus Width
- 66MHz UTOPIA L3 and POS-PHY L3 Clock
- 52MHz UTOPIA L2 and POS-PHY L2 Clock
- Ports Independently Configurable for Cell or Packet Traffic in POS-PHY Bus Modes
- Direct, PLCP, DSS, and Clear-Channel Cell Mapping
- Direct and Clear-Channel Packet Mapping
- On-Chip DS3 (M23 or C-Bit) and E3 (G.751 or G.832) Framer(s)
- Ports Independently Configurable for DS3, E3 (Full or Subrate) or Arbitrary Framing Protocols Up to 52Mbps
- Programmable (Externally Controlled or Internally Finite State Machine Controlled) Subrate DS3/E3

Note: Some revisions of this device may incorporate deviations from published specifications known as errata. Multiple revisions of any device may be simultaneously available through various sales channels. For information about device errata, click here: www.maxim-ic.com/errata.

FEATURES (continued)

- Full-Featured DS3/E3/PLCP Alarm Generation and Detection
- Built-In HDLC Controllers with 256-Byte FIFOs for Insertion/Extraction of DS3 PMDL, G.751 Sn Bit, and G.832 NR/GC Bytes and PLCP NR/GC Bytes
- On-Chip BERTs for PRBS and Repetitive Pattern Generation, Detection, and Analysis
- Large Performance-Monitoring Counters for Accumulation Intervals of at Least 1 Second
- Flexible Overhead Insertion/Extraction Ports for DS3, E3, and PLCP Framers
- Pin and Software Compatible with DS3181–DS3184 Single–Quad ATM/Packet PHYs with Built-In LIUs and DS3171–DS3174 Single–Quad DS3/E3 Single-Chip Transceivers—Framers and LIUs

DETAILED DESCRIPTION

The DS3161 (single), DS3162 (dual), DS3163 (triple), and DS3164 (quad) PHYs perform all the functions necessary for mapping/demapping ATM cells and/or packets into as many as four DS3 (44.736Mbps) framed, E3 (34.368Mbps) framed, or 52Mbps clear-channel data streams. Dedicated cell processor and packet processor blocks prepare outgoing cells or packets for transmission and check incoming cells or packets upon arrival. Built-in DS3/E3 framers transmit and receive cell/packet data in properly formatted M23 DS3, C-bit DS3, G.751 E3, or G.832 E3 data streams. PLCP framers provide legacy ATM transmission-convergence support. DSS scrambling is performed for clear-channel ATM cell support. With integrated hardware support for both cells and packets, the DS316x DS3/E3 ATM/Packet PHYs provide system-on-chip solutions (from DS3/E3/STS-1 digital lines to ATM/Packet UTOPIA/POS-PHY Level 2/3 system switch) for universal high-density line cards in the unchannelized DS3/E3/clear-channel DS3 ATM/Packet applications. Unused functions can be powered down to reduce device power. The DS316x ATM/Packet PHYs with embedded framers conform to the telecommunications standards listed in Section 4.

1 BLOCK DIAGRAM

Figure 1-1 shows the functional block diagram of one channel ATM/Packet PHY.

2 APPLICATIONS

- Access Concentrators
- Multi-Service Access Platforms
- ATM and Frame Relay Equipment
- Routers and Switches
- SONET/SDH ADM
- SONET/SDH Muxes
- PBXs
- Digital Cross Connect
- PDH Multiplexer/Demultiplexer
- Test Equipment
- Integrated Access Device (IAD)

Figure 2-1 and Figure 2-2 show applications for the DS3164 as four-port unchannelized ATM and packet DS3/E3 line cards, respectively.

Figure 2-1. Four-Port Unchannelized ATM over DS3/E3/CC52 Line Card

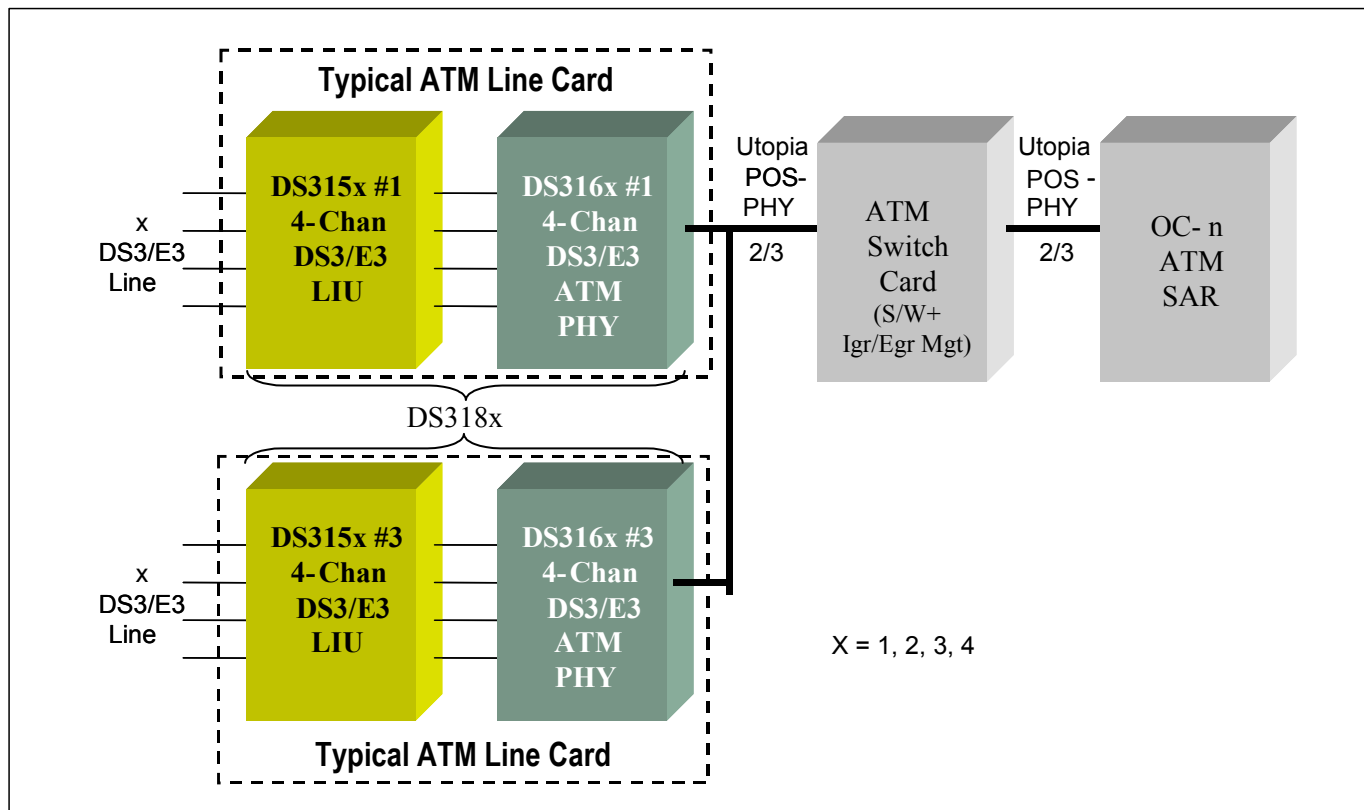

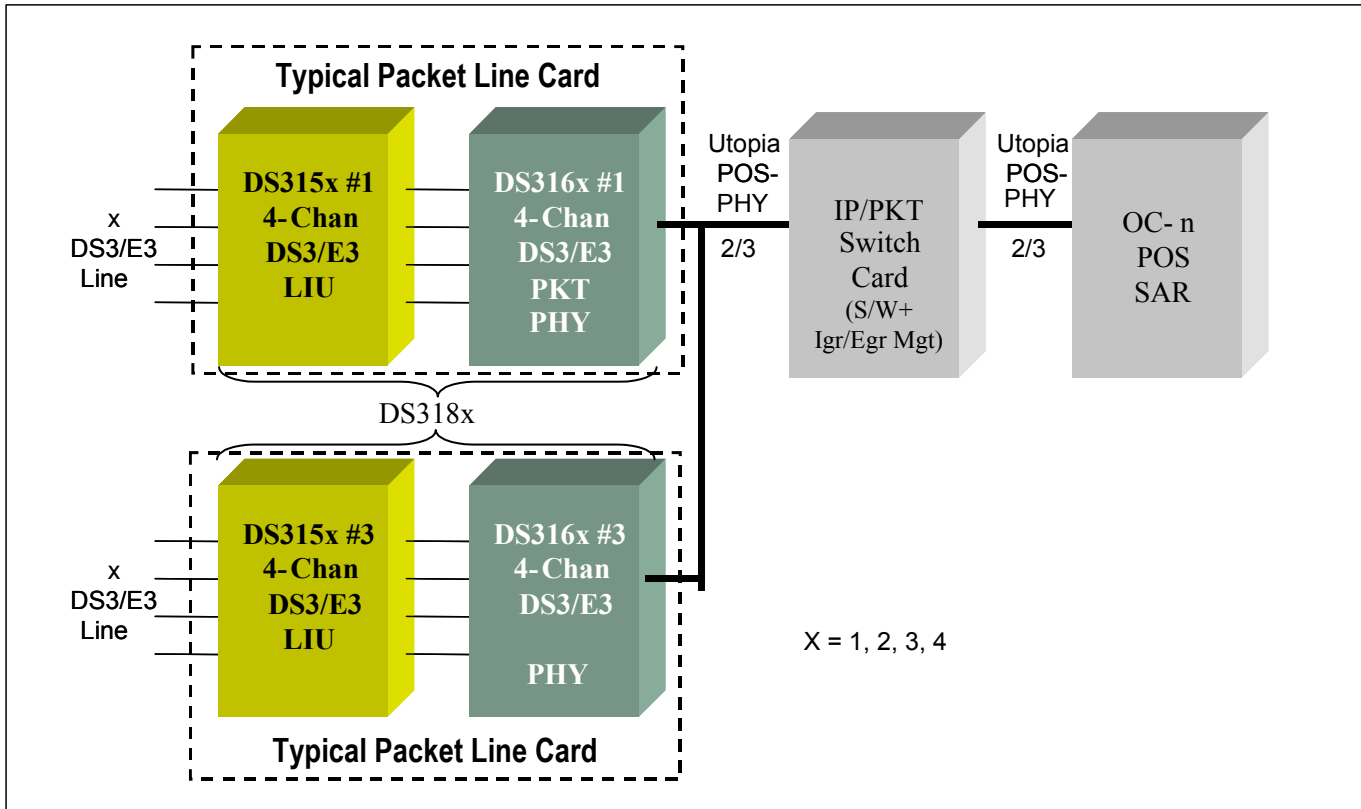

Figure 2-2. Four-Port Unchannelized HDLC over DS3/E3/CC52 Line Card

3 FEATURE DETAILS

The following sections describe the features provided by the DS3161 (single), DS3162 (dual), DS3163 (triple), and DS3164 (quad) PHYs.

- Each port independently configurable
- Universal PHYs map ATM cells and/or HDLC packets into DS3 or E3 data streams
- UTOPIA L2/L3 or POS-PHY L2/L3 OR SPI-3 interface with 8-, 16-, or 32-bit bus
- 66MHz UTOPIA L3 and POS-PHY L3 clock
- 52MHz UTOPIA L2 and POS-PHY L2 clock
- Ports independently configurable for cell or packet traffic in POS-PHY bus modes
- Direct, PLCP, DSS, and clear-channel cell mapping
- Direct and clear-channel packet mapping
- On-chip DS3 (M23 or C-bit) and E3 (G.751 or G.832) framer(s)
- Ports independently configurable for DS3, E3 (full or sub-rate) or arbitrary framing protocols up to 52 Mbps
- Programmable (externally controlled or internally finite state machine controlled) subrate DS3/E3
- Full featured DS3/E3/PLCP alarm generation and detection
- Built-in HDLC controllers with 256-byte FIFOs for the insertion/extraction of DS3 PMDL, G.751 Sn bit and G.832 NR/GC bytes, and PLCP NR/GC bytes
- On-chip BERTs for PRBS and repetitive pattern generation, detection, and analysis
- Large performance-monitoring counters for accumulation intervals of at least 1 second
- Flexible overhead insertion/extraction ports for DS3, E3, and PLCP framers
- Loopbacks include line, diagnostic, framer, payload, terminal, and system interface with capabilities to insert AIS in the directions away from loopback directions
- Ports can be disabled to reduce power
- Integrated Clock Rate Adapter to generate the remaining internally required 44.736MHz (DS3), 34.368MHz (E3), and 52MHz (arbitrary framing at up to 52 Mbps) from a single clock reference source at one of those three frequencies
- Pin and Software Compatible with DS3181–DS3184 Single–Quad ATM/Packet PHYs with Built-In LIUs and DS3171–DS3174 Single–Quad DS3/E3 Single-Chip Transceivers—Framers and LIUs
- 8/16-bit generic microprocessor interface
- Low power (1.6W typ) 3.3V operation (5V tolerant I/O)
- Small high-density thermally enhanced BGA packaging (TE-PBGA) with 1.27mm pin pitch
- Industrial temperature operation: -40°C to 85°C
- IEEE1149.1 JTAG test port

3.1 Global Features

- System interface configurable for UTOPIA L2 / UTOPIA L3 for ATM cell traffic or POS-PHY L2 / POS-PHY L3 or SPI-3 for HDLC packets or mixed packet/cell traffic
- Supports the following transmission protocols:
 - Direct-mapped ATM over DS3 or sub-rate DS3
 - PLCP-mapped ATM over DS3
 - Direct-mapped ATM over G.751 E3 or sub-rate G.751 E3
 - PLCP-mapped ATM over G.751 E3
 - Direct-mapped ATM over G.832 E3 or sub-rate G.832 E3
 - Bit or byte synchronous (octet-aligned) direct-mapped ATM over externally-defined frame formats up to 52 Mbps
 - Clear-channel ATM (cell-based physical layer) at line rates up to 52 Mbps
 - Clear-channel ATM DSS at line rates up to 52 Mbps
 - Direct-mapped HDLC over DS3 or sub-rate DS3
 - Direct-mapped HDLC over G.751 E3 or sub-rate G.751 E3
 - Direct-mapped HDLC over G.832 E3 or sub-rate G.832 E3
 - Bit or byte synchronous (octet-aligned) direct-mapped HDLC over externally-defined frame formats up to 52 Mbps

- Clear-channel HDLC at line rates up to 52 Mbps
- In UTOPIA bus mode, ports are independently configurable for any ATM protocol
- In POS-PHY bus mode, ports are independently configurable for any ATM or HDLC protocol
- Programmable to support internally or externally controlled sub-rate DS3 or E3 on any ports
- Supports gapped 52 MHz clock rates for signals embedded in SONET/SDH
- Optional transmit loop timed clock(s) mode using the associated port's receive clock(s)
- Optional transmit clock mode using references generated by the internal Clock Rate Adapter (CLAD)
- Requires only a single reference clock for all three data rates using internal CLAD
- Clock, data and control signals can be inverted for a direct interface to many other devices
- Detection of loss of transmit clock and loss of receive clock
- Automatic one-second, external or manual update of performance monitoring counters
- Each port can be placed into a low-power standby mode when not being used
- Framing and line code error insertion available

3.2 Receive DS3/E3 Framer Features

- Frame synchronization for M23 or C-bit Parity DS3, or G.751 E3 or G.832 E3
- B3ZS/HDB3/AMI decoding
- Detection and accumulation of bipolar violations (BPV), code violations (CV), excessive zeroes occurrences (EXZ), F-bit errors, M-bit errors, FAS errors, LOF occurrences, P-bit parity errors, CP-bit parity errors, BIP-8 errors, and far end block errors (FEBE)
- Detection of RDI, AIS, DS3 idle signal, loss of signal (LOS), severely errored framing event (SEFE), change of frame alignment (COFA), receipt of B3ZS/HDB3 codewords, DS3 application ID bit, DS3 M23/C-bit format mismatch, G.751 national bit, and G.832 RDI (FERF), payload type, and timing marker bits
- HDLC port for DS3 path maintenance data link (PMDL), G.751 national bit or G.832 NR or GC channels
- FEAC port for DS3 FEAC channel
- 16-byte Trail Trace Buffer port for G.832 trail access point identifier
- DS3 M23 C bits, and stuff bits configurable as payload or overhead, stored in registers for software inspection
- Most framing overhead fields presented on the receive overhead port
- Support for internal and external subrate DS3/E3 control (Fractional DS3/E3)

3.3 Receive PLCP Framer Features

- PLCP frame synchronization
- C1 cycle/stuff counter interpretation
- Detection of out of frame (OOF), BIP-8 errors, FEBE and RAI (Yellow Signal)
- Frame timing can be presented on the GPIO2 output pin or used as the transmit PLCP reference
- All path overhead fields presented on the PLCP receive overhead port
- HDLC port for data link messages on F1, M1 or M2 bytes
- Trail Trace port for trace messages on F1 byte

3.4 Receive Cell Processor Features

- HEC-based cell delineation within the DS3/E3 frame, the PLCP frame, an externally defined frame, or the entire line bandwidth
- Cell de-scrambling using the self-synchronizing scrambler ($x^{43}+1$) for ATM over DS3/E3
- Distributed Sample Scrambler (DSS) for clear-channel ATM (cell-based physical layer)
- HEC error detection and correction; HEC discard
- Filtering of idle, unassigned and/or invalid cells (provisionable)
- Header pattern comparison vs. 32-bit header pattern and mask registers; counting of matching or non-matching cells; discard of matching or non-matching cells
- Four-cell Receive FIFO
- Controls include enables/disables/settings for: cell processing, coset polynomial addition, error correction, errored cell extraction, cell de-scrambling, idle/unassigned/invalid cell filtering, header pattern match counting/discarding, LCD integration time
- Status fields include: out of cell delineation (OCD), loss of cell delineation (LCD) and receipt of idle, unassigned, invalid, errored, corrected or header-pattern-match cells

- Performance monitoring counters for forwarded cells, corrected cells, uncorrectable cells, header pattern match/no-match cells, and filtered idle/unassigned/invalid cells
- Octet alignment option for externally defined frame formats

3.5 Receive Packet Processor Features

- Packet de-scrambling using the self-synchronizing scrambler ($x^{43}+1$)
- Flag detection, packet delineation, and inter-frame fill discard (flags and all-ones)
- Packet abort detection and accumulation
- Bit or octet de-stuffing
- FCS checking (16-bit or 32-bit), error accumulation, and FCS discard
- Packet size checking vs. programmable minimum and maximum size registers
- Abort declaration for packets with non-integral number of bytes
- Controls include enables/disables/settings for: packet processing, de-scrambling, 16/32-bit FCS, filtering of FCS erred packets, FCS discard, minimum/maximum packet size
- Status fields include: receipt of FCS erred packet, aborted packet, size violation packet, non-integer-length packets
- Performance monitoring counters for forwarded packets, forwarded bytes, aborted bytes, FCS erred packets, aborted packets, size violation packets (min, max, non-integer-length)
- Octet alignment with octet de-stuffing option for externally defined frame formats

3.6 Receive FIFO Features

- Storage capacity for four cells or 256 bytes of packet data per port
- Programmable port address
- Programmable fill level thresholds
- Underflow and overflow status indications

3.7 Receive System Interface Features

- UTOPIA L2 / UTOPIA L3 interface in cell mode, POS-PHY L2 / POS-PHY L3 or SPI-3 interface in packet or mixed traffic modes
- 8, 16, or 32-bit data bus at clock rates from 10 MHz to 66 MHz (52 MHz in L2 modes)
- Polled and direct cell available outputs
- Controls include enables/disables/settings for: HEC transfer, signal inversions, parity enable/polarity, cell available de-assertion time

3.8 Transmit System Interface Features

- UTOPIA L2 / UTOPIA L3 interface in cell mode, POS-PHY L2 / POS-PHY L3 or SPI-3 interface in packet or mixed traffic modes
- 8, 16, or 32-bit data bus at clock rates from 10 MHz to 66 MHz (52 MHz in L2 modes)
- Polled and direct cell available outputs
- Controls include enables/disables/settings for: HEC transfer, signal inversions, parity enable/polarity, cell available de-assertion time

3.9 Transmit FIFO Features

- Storage capacity for four cells or 256 bytes of packet data per port
- Programmable port address
- Programmable fill level thresholds
- Underflow and overflow status indications

3.10 Transmit Cell Processor Features

- Programmable fill cell type
- HEC calculation and insertion/overwrite, including coset addition
- Cell scrambling using the self-synchronizing scrambler ($x^{43}+1$) for ATM over DS3/E3
- Distributed Sample Scrambler (DSS) for clear-channel ATM (cell-based physical layer)

- Single-bit and multiple-bit header error insertion for diagnostics
- Controls include enables/disables/settings for: cell processing, HEC insertion, coset polynomial addition, cell scrambling, fill cell type, error insertion type/rate/count, HEC bit corruption
- Counter for number of cells read from the transmit FIFO
- Cell mapping into the DS3/E3 frame, the PLCP frame, an externally defined frame, or the entire line bandwidth
- Octet alignment option for externally defined frame formats

3.11 Transmit Packet Processor Features

- FCS calculation (16-bit or 32-bit) and insertion/overwrite
- Programmable FCS error insertion for diagnostics
- Bit or octet stuffing
- Programmable inter-frame fill insertion (flags or all-ones)
- Automatic packet abort insertion
- Packet scrambling using the self-synchronizing scrambler ($x^{43}+1$)
- Controls include enables/disables/settings for: packet processing, FCS insertion or overwrite, 16/32-bit FCS, inter-frame fill type/length, scrambling, FCS error insertion type/rate/count
- Counters for number of packets and bytes read from the transmit FIFO
- Octet alignment with octet stuffing option for externally defined frame formats

3.12 Transmit PLCP Formatter Features

- Insertion of FAS bytes (A1, A2), path overhead identification (POI) bytes, and path overhead bytes
- Generation of BIP-8 (B1), FEBE and RAI (G1)
- C1 cycle/stuff counter generation referenced to GPIO4 input pin, referenced to the received PLCP timing, or based on an 8 kHz division of one of the clock sources
- Automatic or manual insertion of FAS errors, BIP-8 errors
- All path overhead fields can be sourced from the PLCP transmit overhead port
- HDLC port for data link messages on F1, M1 or M2 bytes
- Trail Trace port for trace messages on F1 byte

3.13 Transmit DS3/E3 Formatter Features

- Insertion of framing overhead for M23 or C-bit parity DS3, or G.751 E3 or G.832 E3
- B3ZS/HDB3 encoding
- Generation of RDI, AIS, and DS3 idle signal
- Automatic or manual insertion of bipolar violations (BPVs), excessive zeroes (EXZ) occurrences, F-bit errors, M-bit errors, FAS errors, P-bit parity errors, CP-bit parity errors, BIP-8 errors, and far end block errors (FEBE)
- HDLC port for DS3 path maintenance data link (PMDL), G.751 national bit or G.832 NR or GC channels
- FEAC port for DS3 FEAC channel can be configured to send one codeword, one codeword continuously, or two different codewords back-to-back to send DS3 Line Loopback commands
- 16-byte Trail Trace Buffer port for the G.832 trail access point identifier
- Insertion of G.832 payload type, and timing marker bits from registers
- DS3 M23 C bits configurable as payload or overhead; as overhead they can be controlled from registers or the transmit overhead port
- Most framing overhead fields can be sourced from transmit overhead port
- Formatter bypass mode for clear channel or externally defined format applications
- Support for subrate DS3/E3, internally or externally controlled (Fractional DS3/E3)

3.14 Clock Rate Adapter Features

- Generation of the internally needed DS3 (44.736 MHz), E3 (34.368 MHz), and STS-1(51.84 MHz) clocks a from single input reference clock
- Input reference clock can be 51.84 MHz, 44.736MHz or 34.368 MHz
- Derived clocks can be transmitted off-chip for external system use
- Standards compliant jitter and wander requirements.

3.15 HDLC Overhead Controller Features

- Each port has a dedicated HDLC controller for DS3/E3 framer or PLCP link management
- 256-byte receive and transmit FIFOs
- Handles all of the normal Layer 2 tasks including zero stuffing/de-stuffing, FCS generation/checking, abort generation/checking, flag generation/detection, and byte alignment
- Programmable high and low water marks for the transmit and receive FIFOs
- Terminates the Path Maintenance Data Link in DS3 C-bit Parity mode and optionally the G.751 Sn bit or the G.832 NR or GC channels or PLCP F1, M1 or M2 bytes
- RX data is forced to all ones during LOS, LOF and AIS detection to eliminate false packets

3.16 FEAC Controller Features

- Each port has a dedicated FEAC controller for DS3/E3 link management
- Designed to handle multiple FEAC codewords without Host intervention
- Receive FEAC automatically validates incoming codewords and stores them in a 4-byte FIFO
- Transmit FEAC can be configured to send one codeword, one codeword continuously, or two different codewords back-to-back to send DS3 Line Loopback commands
- Terminates the FEAC channel in DS3 C-Bit Parity mode and optionally the Sn bit in E3 mode

3.17 Trail Trace Buffer Features

- Each port has a dedicated Trail Trace Buffer for E3-G.832 or DS3/E3 PLCP link management
- Extraction and storage of the incoming G.832 or PLCP trail access point identifier in a 16-byte receive register
- Insertion of the outgoing trail access point identifier from a 16-byte transmit register
- Receive trace identifier unstable status indication

3.18 Bit Error Rate Tester (BERT) Features

- Each port has a dedicated BERT tester
- Generation and detection of pseudo-random patterns and repetitive patterns from 1 to 32 bits in length
- Pattern insertion/extraction in PLCP payload, DS3/E3 payload, DS3/E3 fractional payload or entire data stream to and from the line interface
- Large 24-bit error counter allows testing to proceed for long periods without host intervention
- Errors can be inserted in the generated BERT patterns for diagnostic purposes (single bit errors or specific bit-error rates)

3.19 Loopback Features

- Analog interface loopback – ALB (transmit to receive)
- Line facility loopback – LLB (receive to transmit) with optional transmission of unframed all-one AIS payload toward system/trunk interface
- Framer diagnostic loopback – DLB (transmit to receive) with automatic transmission of DS3 AIS or unframed all-one AIS signal toward line/tributary interface(s)
- DS3/E3 framer payload loopback – PLB (receive to transmit) with optional transmission of unframed all-one AIS payload toward system/trunk interface
- System interface loopback – SLB (transmit to receive)
- Simultaneous line facility loopback and framer diagnostic loopback

3.20 Microprocessor Interface Features

- Multiplexed or non-multiplexed address bus modes
- 8 or 16-bit data bus modes
- Byte swapping option in 16-bit data bus mode
- Read/Write and Data Strobe modes
- Ready handshake output signal
- Global reset input pin
- Global interrupt output pin

- Two programmable I/O pins per port

3.21 Subrate Features (Fractional DS3/E3)

- Independent per port built-in support for subrate DS3 or E3
- Independent subrate operation for both RX and TX data paths
- Subrate operation for each channel is totally independent from the other channels' operation, i.e. all subrate functions within the device are mutually exclusive
- Three distinct subrate algorithms:
 - (FFRAC) Externally controlled with DS3 or E3 payload manipulating capability
 - (XFRAC) Externally controlled with flexible DS3 or E3 data rate reduction capability
 - (IFRAC) Internally controlled with simple DS3 or E3 data rate reduction capability
- Subrate algorithm selection is on per port basis
- Internal subrate mechanism allows down to bit-level granularity of the DS3 or E3 payload

3.22 Test Features

- Five pin JTAG port
- All functional pins are inout pins in JTAG mode
- Standard JTAG instructions: Sample/Preload, Bypass, Exttest, Clamp, HighZ, Idcode
- RAM BIST on all internal RAM
- Hi-Z pin to force all digital output and inout pins into HIZ
- TEST pin for manufacturing scan test modes

5 ACRONYMS AND GLOSSARY

Definition of the terms used in this datasheet:

Acronyms

- ATM – Asynchronous Transfer Mode
- CC52 – Clear-Channel 52 Mbps (STS-1 Clock Rate)
- CLAD – Clock Rate Adapter
- CLR – Clear-Channel Mode
- DSS – Distributed Sample Scrambler
- FFRAC – Flexible Fractional Mode
- FRM – Frame Mode
- HDLC – High Level Data Link Control
- IFRAC – Internal Fractional Mode
- OHM – Overhead Mask mode for externally defined framing
- PLCP – Physical Layer Convergence Protocol
- SPI-3 – same as POS-PHY L3
- XFRAC – External Fractional Mode

Glossary

- Cell – ATM cell
- Clear Channel – A datastream with no framing included
- Fractional – Uses only a portion of available payload for data, also known as subrate
- Octet Aligned – Byte aligned
- Packet – HDLC packet
- Subrate – See Fractional
- Un-channelized – See Clear Channel

6 MAJOR OPERATIONAL MODES

The major operational modes are determined by the FM[5:0] framer mode bits and a few other control bits. Unused features are powered down and the data paths are held in reset. The configuration registers of the unused features can be written to and read from. The function of some IO pins change in different operational modes. The line interface operational modes are determined by the LM bit.

6.1 DS3/E3 ATM/Packet Mode

DS3/E3 ATM/Packet mode is a normal mode of operation for the DS316x device, which maps/de-maps ATM cells or packet data into a DS3 or E3 data stream via the selected mapping mode. Major functional blocks for the DS3/E3 ATM/Packet mode are shown in [Figure 6-1](#). Mapping configuration is programmable on per port basis and is shown in [Table 6-1](#).

Table 6-1. DS3/E3 ATM/Packet Mode Configuration Registers

MODE	FM[5:0]	SIM[1:0] GL.CR1	PMCPE <i>PORT.CR2</i>
UTOPIA L2 ATM	0XX000	00	X
UTOPIA L3 ATM	0XX000	01	X
POS-PHY L2 ATM	0XX000	10	1
POS-PHY L3 ATM	0XX000	11	1
POS-PHY L2 Packet	0XX000	10	0
POS-PHY L3 Packet	0XX000	11	0

Figure 6-1. DS3/E3 ATM/Packet Mode
