Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DS500SDC 500 Watts

Distributed Power System

Front-end Bulk Power Total Output Power: 500 W continuous Wide Input Voltage: -36 to -72 Vdc

SPECIAL FEATURES

- 500 W output power
- High power and short form factor
- 1U power supply

Data Sheet

- High-density design: 12 W/in³
- Inrush current control
- N+1 or N+N redundant
- Active current sharing
- Full digital control
- PMBus compliant
- Compatible with Artesyn's Universal PMBus GUI
- Reverse airflow available
- Two-year warranty

COMPLIANCE

 EMI Conducted/Radiated Class A Limits

SAFETY

- UL/cUL 60950 (UL Recognized)

Control and Status Signals

Input Signals

PSON_L

Active LOW signal which enables/disables the main output. Pulling this signal LOW will turn-on the main output. Recommended pull-up resistor to 12 VSB is 8.2 k with a 3.0 k pull-down to ground. A 100 pF decoupling capacitor is also recommended.

		MIN	MAX
V _{IL}	Input logic level LOW		0.8 V
V _{IH}	Input logic level HIGH	2.0 V	5.0 V
I _{SOURCE}	Current that may be sourced by this pin		2 mA
I _{SINK}	Current that may be sunk by this pin at low state		0.5 mA

PSKILL_L

First break/last mate active LOW signal which enables/disables the main output. This signal will have to be pulled to ground at the system side with a 220 ohm resistor. A 100 pF decoupling capacitor is also recommended.

		MIN	MAX
V _{IL}	Input logic level LOW		0.8 V
V _{IH}	Input logic level HIGH	2.0 V	5.0 V
I _{SOURCE}	Current that may be sourced by this pin		2 mA
I	Current that may be sunk by this pin at low state		0.5 mA

Output Signals

INPUT_OK

Signal used to indicate the presence of DC input to the power supply. A logic level HIGH will indicate that the DC input to the power supply is within the operating range while a logic level LOW will indicate that DC input has been lost.

This is an open collector/drain output. This pin is pulled high by a 1.0 kohm resistor connected to 3.3 V inside the power supply. It is recommended that this pin be connected to a 100 pF decoupling capacitor and pulled down by a 100 kohm resistor.

		MIN	MAX
V _{IL}	Input logic level LOW		0.6 V
V _{IH}	Input logic level HIGH	2.0 V	5.0 V
I _{SOURCE}	Current that may be sourced by this pin		3.3 mA
I _{SINK}	Current that may be sunk by this pin at low state		0.7 mA

PWR_GOOD / PWOK

Signal used to indicate that main output voltage is within regulation range. The PWR_GOOD signal will be driven HIGH when the output voltage is valid and will be driven LOW when the output falls below the under-voltage threshold.

This signal also gives an advance warning when there is an impending power loss due to loss of DC input or system shutdown request. More details in the Timing Section.

This is an open collector/drain output. This pin is pulled high by a 1.0 kohm resistor connected to 3.3 V inside the power supply. It is recommended that this pin be connected to a 100 pF decoupling capacitor and pulled down by a 10 kohm resistor.

ISOURCE	Current that may be sourced by this pin		3.3 mA
I _{SINK}	Current that may be sunk by this pin at low state		0.7 mA

Control and Status Signals

Output Signals

PS_PRESENT_L

Signal used to indicate to the system that a power supply is inserted in the power bay. This pin is shorted to the standby return in the power supply. Recommended pull-up resistor to 12 VSB is 8.2 k with a 3.0 k pull-down to ground. A 100 pF decoupling capacitor is also recommended.

1 1 1

PS_INTERRUPT_L

Active low signal used by the power supply to indicate to the system that a change in power supply status has occurred. This event can be triggered by faults such as OVP, OCP, OTP, and fan fault. This signal can be cleared by a CLEAR_FAULT command. Recommended pull-up resistor to 12 VSB is 8.2 k with a 3.0 k pull-down to ground. A 100 pF decoupling capacitor is also recommended.

I _{SOURCE}	Current that may be sourced by this pin		4 mA
I _{SINK}	Current that may be sunk by this pin at low state		4 mA
BUS Signals			

ISHARE

Bus signal used by the power supply for active current sharing. All power supplies configured in the system for n+n sharing will refer to this bus voltage inorder to load share.

Voltage Range	The range of this signal for active sharing will be u	The range of this signal for active sharing will be up to 8.0 V, which corresponds to the maximum output current.
