Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DSC2010

Low-Jitter Configurable CMOS Oscillator

General Description

The DSC2010 series of high performance CMOS oscillators utilize a proven silicon MEMS technology to provide excellent jitter and stability while incorporating additional device functionality. The DSC2010 allows the user to easily modify the frequency and drive strength of the oscillator using pins. The DSC2010 has provision for up to four user-defined pre-programmed, pin-selectable output frequencies, and eight pin-selectable output drive levels to help reduce EMI.

DSC2010 is packaged in a 14-pin 3.2x2.5 mm QFN package and available in temperature grades from Ext. Commercial to Automotive.
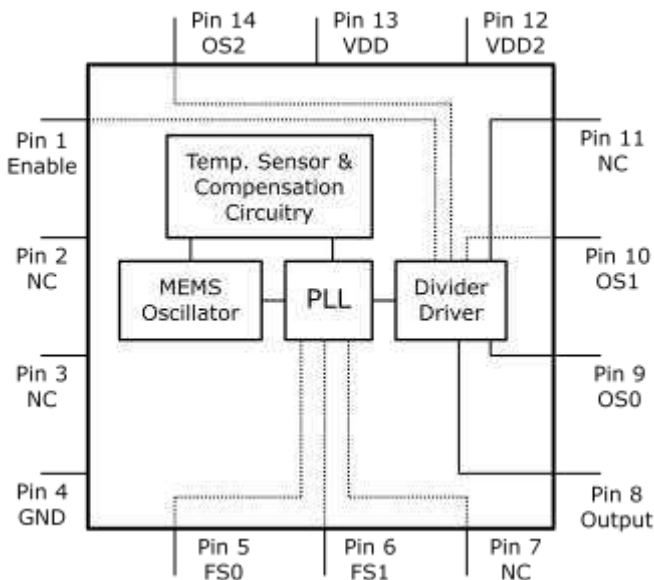

Features

- **Low RMS Phase Jitter: <1 ps (typ)**
- **High Stability: ±10, ±25, ±50 ppm**
- **Wide Temperature Range**
  - Automotive: -55° to 125° C
  - Ext. Industrial: -40° to 105° C
  - Industrial: -40° to 85° C
  - Ext. commercial: -20° to 70° C
- **High Supply Noise Rejection: -50 dBc**
- **Pin-Selectable Configurations**
  - 3-bit Output Drive Strength
  - 2-bit Output Frequency Combinations
- **Short Lead Times: 2 Weeks**
- **Wide Freq. Range:**
  - CMOS Output: 2.3 to 170 MHz
- **Miniature Footprint of 3.2x2.5mm**
- **Excellent Shock & Vibration Immunity**
  - Qualified to MIL-STD-883
- **High Reliability**
  - 20x better MTF than quartz oscillators
- **Supply Range of 2.25 to 3.6 V**
- **Lead Free & RoHS Compliant**

Block Diagram

Applications

- **Consumer Electronics**
- **Storage Area Networks**
  - SATA, SAS, Fibre Channel
- **Passive Optical Networks**
  - EPON, 10G-EPON, GPON, 10G-PON
- **Ethernet**
  - 1G, 10GBASE-T/KR/LR/SR, and FCoE
- **HD/SD/SDI Video & Surveillance**
- **PCI Express**

Pin Description

Pin No.	Pin Name	Pin Type	Description
1	Enable	I	Enables outputs when high and disables when low
2	NC	NA	Leave unconnected or grounded
3	NC	NA	Leave unconnected or grounded
4	GND	Power	Ground
5	FS0	I	Least significant bit for frequency selection
6	FS1	I	Most significant bit for frequency selection
7	NC	NA	Leave unconnected or grounded
8	Output	O	CMOS output
9	OS0	I	Least significant bit for output drive strength selection
10	OS1	I	Middle bit for output drive strength selection
11	NC	NA	Leave unconnected or grounded
12	VDD2	Power	Power Supply
13	VDD	Power	Power Supply
14	OS2	I	Most significant bit for output drive strength selection

Operational Description

The DSC2010 is a CMOS oscillator consisting of a MEMS resonator and a support PLL IC. The CMOS output is generated through independent 8-bit programmable dividers from the output of the internal PLL.

The actual frequency output by the DSC2010 is controlled by an internal pre-programmed memory (OTP). This memory stores all coefficients required by the PLL for up to four different frequencies. Two control pins (FS0 – FS1) select the output frequency. Discera supports customer defined versions of the DSC2010. Standard frequency options are described in the following sections.

When Enable (pin 1) is floated or connected to VDD, the DSC2010 is in operational mode. Driving Enable to ground will disable the output driver (hi-impedance mode).

The DSC2010 has programmable output drive strength. Using three control pins (OS0-OS2) the drive strength can be adjusted to match circuit board impedances to reduce power supply noise, overshoot/undershoot and EMI. Table 1 displays typical rise / fall times for the output with a 15pf load capacitance as a function of these control pins at VDD=3.3V and room temperature.

Table 1. Rise/Fall times for drive strengths

Output Drive Strength Bits [OS2, OS1, OS0] - Default [**111**]							
000	001	010	011	100	101	110	**111**
t_r (ns) 2.1	1.7	1.6	1.4	1.3	1.3	1.2	**1.1**
t_f (ns) 2.5	2.4	2.4	2.2	1.8	1.6	1.4	**1.4**

Output Clock Frequencies

Table 2 lists the standard frequency configurations and the associated ordering information to be used in conjunction with the ordering code. Customer defined combinations are available.

Table 2. Pre-programmed pin-selectable output frequency combinations

Ordering Info	Freq (MHz)	Freq Select Bits [FS1, FS0] – **Default is [11]**			
		00	01	10	**11**
A0001	f_{OUT}	27	24	148.5	**74.25**
A0002	f_{OUT}	155.52	106.25	156.25	**125**
A0003	f_{OUT}	25	75	125	**150**
A0004	f_{OUT}	72	74.25	36	**108**
A0005	f_{OUT}	27	50	0*	**0***
A0006	f_{OUT}	16	13.56	0*	**0***
A0007	f_{OUT}	96	55	0*	**0***
A0008	f_{OUT}	25	50	0*	**0***
A0009	f_{OUT}	55.296	27.648	0*	**0***
A00010	f_{OUT}	27.648	55.296	0*	**0***
A000X	f_{OUT}	Contact factory for additional configurations.			

Frequency select bit are weakly tied high so if left unconnected the default setting will be [11] and the device will output the associated frequency highlighted in **Bold**.
0* – denotes invalid selection, output frequency is not specified.

Absolute Maximum Ratings

Item	Min	Max	Unit	Condition

Notes:
1. Pin 4 V_{DD} should be filtered with 0.01uf capacitor.
2. t_{su} is time to 100PPM stable output frequency after V_{DD} is applied and outputs are enabled.
3. Output Waveform and Test Circuit figures below define the parameters.
4. Output is enabled if Enable pad is floated or not connected.
