Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Low-Jitter I²C/SPI Programmable Dual LVPECL Oscillator

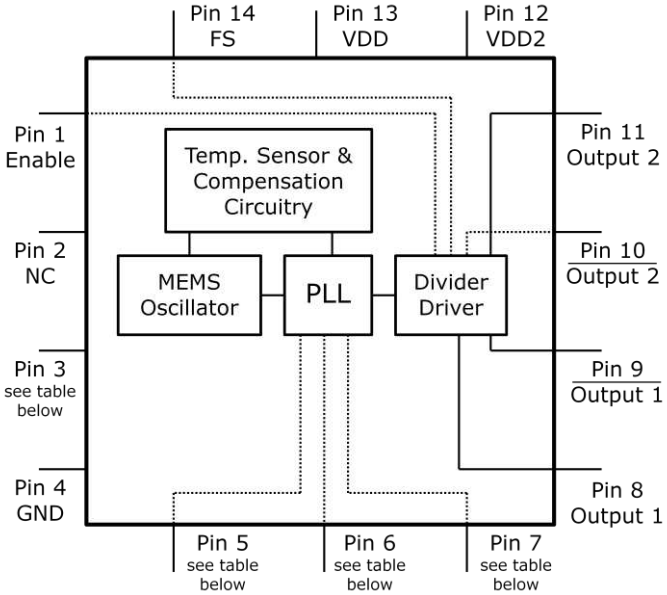
Datasheet

General Description

The DSC2122 and DSC2222 series of programmable, high-performance dual LVPECL oscillators utilizes a proven silicon MEMS technology to provide excellent jitter and stability while incorporating high output frequency flexibility. DSC2122 and DSC2222 allow the user to independently modify the frequency of each output using I²C or SPI interface, respectively. User can also select from two pre-programmed default output frequencies using the control pin.

DSC2122 and DSC2222 are packaged in 14-pin 3.2x2.5 mm QFN packages and available in temperature grades from Ext. Commercial to Industrial.

Block Diagram



Pin #	DSC2122 (I²C)	DSC2222 (SPI)
3	NC	SCLK
5	SDA	MOSI
6	SCL	MISO
7	CS_bar	SS

Features

- **Low RMS Phase Jitter: <1 ps (typ)**
- **High Stability: ±50 ppm**
- **Wide Temperature Range**
  - Industrial: -40° to 85° C
  - Ext. commercial: -20° to 70° C
- **High Supply Noise Rejection: -50 dBc**
- **Two Independent LVPECL Outputs**
- **I²C/SPI Programmable Frequencies**
- **Short Lead Times: 2 Weeks**
- **Wide Frequency Range:**
  - LVPECL Output: 2.3 to 460 MHz
- **Miniature Footprint of 3.2x2.5mm**
- **Excellent Shock & Vibration Immunity**
  - Qualified to MIL-STD-883
- **High Reliability**
  - 20x better MTF than quartz oscillators
- **Supply Range of 2.25 to 3.6 V**
- **Lead Free & RoHS Compliant**

Applications

- **Storage Area Networks**
  - SATA, SAS, Fibre Channel
- **Passive Optical Networks**
  - EPON, 10G-EPON, GPON, 10G-PON
- **Ethernet**
  - 1G, 10GBASE-T/KR/LR/SR, and FCoE
- **HD/SD/SDI Video & Surveillance**
- **PCI Express**

Operational Description

The DSC2122/2222 is a dual LVPECL oscillator consisting of a MEMS resonator and a support PLL IC. The outputs are generated through independent 8-bit programmable dividers from the output of the internal PLL.

DSC2122/2222 allows for easy programming of the output frequencies using I²C/SPI interface. Upon power-up, the initial output frequencies are controlled by an internal pre-programmed memory (OTP). This memory stores all coefficients required by the PLL for two different default frequency pairs. The control pin (FS) selects the initial pair. Once the device is powered up, a new output frequency pair can be programmed. Programming details are provided in the ***Programming Guide***. Standard default frequency pairs are described in the following sections. Discera supports customer defined versions of the DSC2122/2222.

When Enable (pin 1) is floated or connected to VDD, the DSC2122/2222 is in operational mode. Driving Enable to ground will tri-state both output drivers (hi-impedance mode).

Output Clock Frequencies

Table 1 lists the standard default frequency configurations and the associated ordering information to be used in conjunction with the ordering code. Customer defined combinations are available.

Table 1. Pre-programmed pin-selectable output frequency pairs

Ordering Info	Freq (MHz)	Select Bit [FS] – **Default is [1]**	
		0	**1**
F0001	f_{OUT1}	106.25	**100**
	f_{OUT2}	25	**100**
F0002	f_{OUT1}	156.25	**0***
	f_{OUT2}	25	**0***
F0003	f_{OUT1}	150	**0***
	f_{OUT2}	150	**0***
FXXXX	f_{OUT1}	Contact factory for additional configurations.	
	f_{OUT2}		

Frequency select bit are weakly tied high so if left unconnected the default setting will be [1] and the device will output the associated frequency highlighted in **Bold**.
0* – denotes invalid selection, output frequency is not specified.
