Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## General Description

DSC2311KL2-R0052 is a crystal-less clock generator that is factory configurable to simultaneously output two separate frequencies from 2.3 to 170 MHz . The clock generator uses proven silicon MEMS technology to provide low jitter and high frequency stability across a wide range of supply voltages and temperatures. By eliminating the external quartz crystal, crystal-less clock generators significantly enhance reliability and accelerate product development, while meeting stringent clock performance criteria for a variety of consumer electronics, communications, and storage applications.
DSC2311KL2-R0052 has an output enable/disable feature allowing it to disable the outputs when OE is low. The device is available in a space-saving 6-pin $2.5 \mathrm{~mm} \times 2.0 \mathrm{~mm}$ TDFN package that needs only a single external bypass capacitor. This requires a PCB footprint equivalent to that of a $1.0 \mathrm{~mm} \times 1.0 \mathrm{~mm}$ crystal-based clock generator.

## Features

- Two simultaneous LVCMOS outputs:
- 4MHz
- 24MHz
- Low RMS phase jitter: <1ps (typical)
- $\pm 25 \mathrm{ppm}$ frequency stability
- $-40^{\circ} \mathrm{C}$ to $+105^{\circ} \mathrm{C}$ ext. industrial temperature range
- High supply noise rejection: -50dBc
- High shock \& vibration immunity
- Qualified to MIL-STD-883
- High reliability
- 20x higher MTBF than crystal-based clock generator designs
- Programmable output strength for EMI reduction and signal integrity optimization
- Supply range of 2.25 to 3.6 V
- AEC-Q100 automotive qualified
- 6-pin $2.5 \mathrm{~mm} \times 2.0 \mathrm{~mm}$ TDFN package

## Applications

- Consumer Electronics
- Camera and Imaging Modules
- Home Automation
- Industrial and Power Conversion
- Mobile Communications, Internet, and Sensor Devices
- Solid State, Hard Drive, and Flash Drive Storage
- Automotive

## Notes:

1. Pin 4 VDD should be filtered with $0.1 u F$ capacitor.
2. Output is enabled if OE pad is high or not connected. Supply current $=$ Disabled Current $+\Delta$ IDD from CLK $0+\Delta$ IDD from CLK 1. See Current Consumption graph on next page.
3. tSU is time to stable output frequency after VDD is applied and outputs are enabled.
4. See Figure 3 for detail (all based on maximum drive settings).
5. Period Jitter includes crosstalk from adjacent output.
6. For other ppm stabilities, contact the factory at MEMS_Support@microchip.com.
