Product Description

DUB71 is a precise TRMS AC/DC over or under voltage (selectable by DIP-switch) monitoring relay.
Owing to the built-in latch function, the ON-position of the relay output can be maintained. Inhibit function can be used to avoid relay operation when not desired (maintenance, transitions).
The LED's indicate the state of the alarm and the output relay.
35.5 mm wide housing suitable both for back and front panel mounting.

Mode of Operation

DUB71 monitor both AC and DC over or under voltage.

Example 1
(no connection between terminals Z1, Y1 - latch function disabled)
The relay operates when the measured value exceeds (or drops below) the set level for more than the set delay time.
It releases when the voltage drops below (or exceeds) the set level (see hysteresis setting), or when power supply is interrupted.

Example 2
(connection between terminals Z1, Y1 - latch function enabled)
The relay operates and latches in operating position when the measured value exceeds (or drops below) the set level for more than the set delay time.
Provided that the voltage has dropped below (or has exceeded) the set point (see hysteresis setting) the relay releases when the interconnection between terminals Z1, Y1 is interrupted, or power supply is interrupted as well.
The yellow LED flashes until the delay time has expired or the measured value has dropped below the set point (see hysteresis setting).

Note
When the inhibit contact is opened, if the input signal is already in alarm position, the delay time needs to elapse before relay activation.

Function/Range/Level and Time Delay Setting

Adjust the input range setting the DIP switches 1 and 2 as shown below.

Select the desired function setting the DIP switches 3 to 6 as shown below.

To access the DIP switches open the grey plastic cover as shown below.

Selection of level and time delay:

Upper knob:
Setting of hysteresis on relative scale: 0 to 30% on set value.

Centre knob:
Voltage level setting on relative scale: 10 to 110% on full scale.

Lower knob:
Setting of delay on alarm time on absolute scale (0.1 to 30 s).
