## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Description

The Smart Power Relay E-1048-8S is a remotely controllable electronic load disconnecting relay with two functions in a single unit:

- electronic relay
- electronic overcurrent protection

A choice of current ratings is available from 1 A through 30 A . An operating voltage range of DC $9 . . .32 \mathrm{~V}$ allows the connection of DC 12 V and DC 24 V loads.

It has been designed for installation in IP-protected enclosures. The optimised design allows reduction of space requirements up to $50 \%$ compared to standard electro-mechanical cubic relays. Power consumption is cut by factor 5 compared to standard electro-mechanical relays and allows gas saving and reduction of $\mathrm{CO}_{2}$ emissions.

In order to switch and protect loads remotely, it has until now been necessary to connect several discreet components together:

- an electro-mechanic relay, control cable and integral contact to close the load circuit
- an additional protective element (circuit breaker or fuse) for cable or equipment protection

Now type E-1048-8S combines these two functions in a single unit, thus minimising the number of connections in the circuit and thereby reducing the risk of failures.

## Applications

Type E-1048-8S is suited to all applications with DC 12 V or DC 24 V circuits, where magnetic valves, motors or lamp loads have to be switched and protected:

- agricultural and construction machinery,
- road vehicles (utility vehicles, buses, special vehicles)
- rail vehicles
- marine industry (ships, boats, yachts etc.)

The Power Relay is also suitable for industrial use (process control, machine-building, engineering) as an electronic coupling relay between PLC and DC 12 V or DC 24 V load.

## Features

- The E-1048-8Slimline features integral power electronics and provides wear-free switching function, insensitive against shock, vibration and dust.
- Compared to electro-mechanical relays, only a fraction of the closed-circuit current or switching current is needed. This is important for battery buffered load circuits which have to remain controlled even with the generator off line.
- The extremely low induced current consumption of less than $50 \mu \mathrm{~A}$ is absolutely necessary for battery buffered applications
- The load circuit is disconnected in the event of a short circuit.
- For switching and monitoring loads of 25 A plus it is possible to connect several units in parallel. Uniform power distribution between units must be ensured by symmetrical design of the supply cables (length and cross section).
- Load conditions are visually indicated by a bicolour LED (load activated: yellow LED lighted; load disconnected due to overload or short circuit: red LED lighted)
- An optional status output for group fault signalling "SF" provides status indication of the load circuit (overload/short circuit)

## Technical Data ( $\mathrm{T}_{\text {amb. }}=25^{\circ} \mathrm{C}, \mathrm{U}_{\mathrm{N}}=\mathrm{DC} 24 \mathrm{~V}$ )

## Power supply LINE +

| Type | DC power supply with small $R_{i}$ battery and generator etc. |
| :---: | :---: |
| Voltage ratings $\mathrm{U}_{\mathrm{N}}$ | DC $12 \mathrm{~V} / \mathrm{DC} 24 \mathrm{~V}$ |
| Operating voltage $\mathrm{U}_{\mathrm{S}}$ | DC 9... 32 V |
| Closed-circuit current <br> $\mathrm{I}_{0}$ in the OFF condition ${ }^{1)}$ | $<50 \mu \mathrm{~A}$ |
| Load circuit LOAD |  |
| Load output | Power MOSFET, high side switching |
| Current rating range $I_{N}$ | 1 A... 25 A (fixed ratings), without load reduction up to $85^{\circ} \mathrm{C}\left(25 \mathrm{~A} . . .70^{\circ} \mathrm{C}\right)$ $\mathrm{I}_{\mathrm{N}}=1 \mathrm{~A} . . .10 \mathrm{~A}$ : see trip curve 1 $I_{N}=15$ A... 25 A: see trip curve 2 |
| Types of loads | resistive, inductive, capacitive, lamp loads, motors (depending on duration of inrush current) |
| Typical voltage drop $\mathrm{U}_{\mathrm{ON}}$ at rated current $\mathrm{I}_{\mathrm{N}}\left(\right.$ at $\left.25{ }^{\circ} \mathrm{C}\right){ }^{1)}$ |  |

| $\mathrm{I}_{\mathrm{N}}$ | U ${ }_{\text {ON }}$ | $I_{N}$ | UoN |
