## Product Description

The PE42426 is a HaRP™ technology-enhanced reflective SPDT RF switch designed for use in land mobile radio (LMR) and general switching applications. It delivers high linearity and excellent harmonics performance across the entire operational band. It also features low insertion loss and high isolation performance making the PE42426 ideal for general switching applications.

The PE42426 is manufactured on Peregrine's UltraCMOS® process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS.

## Absolute Maximum Ratings

Exceeding absolute maximum ratings listed in **Table 1** may cause permanent damage. Operation should be restricted to the limits in **Table 2**. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

### ESD Precautions

When handling this UltraCMOS device, observe the same precautions as with any other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in **Table 1**.

### Latch-up Immunity

Unlike conventional CMOS devices, UltraCMOS devices are immune to latch-up.

## Switching Frequency

The PE42426 has a maximum 10 kHz switching frequency. Switching frequency describes the time duration between switching events. Switching time is the time duration between the point the control signal reached 50% of the final value and the point the output signal reaches within 10% or 90% of its target value.

## Spurious Performance

The PE42426 spur fundamental occurs around 10 MHz. Its typical performance is -154 dBm/Hz (V1 = H) and -165 dBm/Hz (V1 = L), with 100 kHz bandwidth.

## Thermal Data

Psi-JT ( $\Psi_{JT}$ ), junction top-of-package, is a thermal metric to estimate junction temperature of a device on the customer application PCB (JEDEC JESD51-2).

$$\Psi_{JT} = (T_J - T_T)/P$$

where

$\Psi_{JT}$  = junction-to-top of package characterization parameter, °C/W

$T_J$  = die junction temperature, °C

$T_T$  = package temperature (top surface, in the center), °C

$P$  = power dissipated by device, Watts

## Evaluation Kit

The PE42426 evaluation board was designed to ease customer evaluation of the PE42426 RF switch. The RF common port is connected through a 50Ω transmission line via J3. RF1 and RF2 ports are connected through 50Ω transmission lines via J1 and J2, respectively. A 50Ω through transmission line is available via J4 (THRU left) and J5 (THRU right), which can be used to de-embed the loss of the PCB. J6 provides DC and digital inputs to the device.
