Note 1; Test Jig is recorded by Fig.1.

2. Test Method of Insertion Loss Frequency Characteristic (F-1)

Using the test circuit as shown Test circuit, calibrate 0 dB without Sample being tested at shorting "IN-OUT", then observe the levels at specified frequency by connecting Sample.

Insertion loss and Attenuation are determined by read-out level (A1)[dB] at the base frequency. Insertion loss and attenuation level are shown as following.

$$\cdot \text{Insertion loss} = (A1) \text{ [dB]}$$

$$\cdot \text{Attenuation} = (A1) \text{ [dB]}$$
