### Functional Description

The EMI804x is a family of Common Mode Filters (CMF) with integrated ESD protection, a first in the industry. Differential signaling I/Os can now have both common mode filtering and ESD protection in one package. The EMI804x protects against ESD pulses up to  $\pm 15$  kV contact per the IEC61000-4-2 standard.

The EMI804x is well-suited for protecting systems using high-speed differential ports such as USB 3.0, HDMI 1.3/1.4/2.0; corresponding ports in removable storage and other applications.

The EMI804x is available in a RoHS-compliant, XDFN6 for 1 Differential Pair, XDFN10 for 2 Differential Pair and XDFN16 package for 3 Differential Pair.

TRANSMISSION LINE PULSE (TLP) MEASUREMENTS

Transmission Line Pulse (TLP) provides current versus voltage (I-V) curves in which each data point is obtained from a 100 ns long rectangular pulse from a charged transmission line. A simplified schematic of a typical TLP system is shown in Figure 4. TLP I-V curves of ESD protection devices accurately demonstrate the product’s ESD capability because the 10 s of amps current levels and under 100 ns time scale match those of an ESD event. This is illustrated in Figure 5 where an 8 kV IEC61000-4-2 current waveform is compared with TLP current pulses at 8 A and 16 A. A TLP curve shows the voltage at which the device turns on as well as how well the device clamps voltage over a range of current levels. Typical TLP I-V curves for the EMI804x are shown in Figure 4.
