

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# EMIF01-10005W5

Application Specific Discretes  
A.S.D.<sup>TM</sup>

EMI FILTER  
INCLUDING ESD PROTECTION

## MAIN APPLICATIONS

Where EMI filtering in ESD sensitive equipment is required :

- Computers and printers
- Communication systems
- Mobile phones
- MCU Boards

## DESCRIPTION

The EMIF01-10005W5 is a highly integrated array designed to suppress EMI / RFI noise in all systems subjected to electromagnetic interferences.

Additionally, this filter includes an ESD protection circuitry which prevents the protected device from destruction when subjected to ESD surges up to 15 kV.

## BENEFITS

- Cost-effectiveness compared to discrete solution
- EMI bi-directional low-pass filter
- High efficiency in ESD suppression.
- High flexibility in the design of high density boards
- Very low PCB space consuming : 4.2 mm<sup>2</sup> typically
- High reliability offered by monolithic integration

## COMPLIES WITH THE FOLLOWING STANDARD:

IEC 1000-4-2	15kV	(air discharge)
	8 kV	(contact discharge)

## ESD response to IEC1000-4-2 (16 kV air discharge)

## FUNCTIONAL DIAGRAM

## Filtering response

## EMIF01-10005W5

### ABSOLUTE MAXIMUM RATINGS ( $T_{amb} = 25\text{ }^{\circ}\text{C}$ )

Symbol	Parameter and test conditions	Value	Unit
$V_{PP}$	ESD discharge IEC1000-4-2, air discharge ESD discharge IEC1000-4-2, contact discharge	16 9	kV
$T_j$	Junction temperature	150	$^{\circ}\text{C}$
$T_{op}$	Operating temperature range	-40 to + 85	$^{\circ}\text{C}$
$T_{stg}$	Storage temperature range	-55 to +150	$^{\circ}\text{C}$
$T_L$	Lead solder temperature (10 second duration)	260	$^{\circ}\text{C}$

### ELECTRICAL CHARACTERISTICS ( $T_{amb} = 25\text{ }^{\circ}\text{C}$ )

Symbol	Parameter
$V_{BR}$	Breakdown voltage
$I_{RM}$	Leakage current @ $V_{RM}$
$V_{RM}$	Stand-off voltage
$V_{CL}$	Clamping voltage
$R_d$	Dynamic impedance
$I_{PP}$	Peak pulse current
$R_{I/O}$	Series resistance between Input and Output
$C_{IN}$	Input capacitance per line

Symbol	Test conditions	Min.	Typ.	Max.	Unit
$V_{BR}$	$I_R = 1\text{ mA}$	6	7	8	V
$I_{RM}$	$V_{RM} = 3\text{V}$			1	$\mu\text{A}$
$R_{I/O}$		80	100	120	$\Omega$
$R_d$	$I_{pp} = 10\text{ A}$ , $t_p = 2.5\text{ }\mu\text{s}$ (see note 1)		1		$\Omega$
$C_{IN}$	at 0V bias		50		pF

Note 1 : to calculate the ESD residual voltage, please refer to the paragraph "ESD PROTECTION" on pages 4 & 5

## TECHNICAL INFORMATION

### FREQUENCY BEHAVIOR

The EMIF01-10005W5 is firstly designed as an EMI/RFI filter. This low-pass filter is characterized by the following parameters:

- Cut-off frequency
- Insertion loss
- High frequency rejection

**Fig A1:** EMIF01-10005W5 frequency response curve.

Figure A1 gives these parameters, in particular the signal rejection at the GSM frequency is about -24dB at 900MHz,

**Fig A2:** Measurement conditions

## EMIF01-10005W5

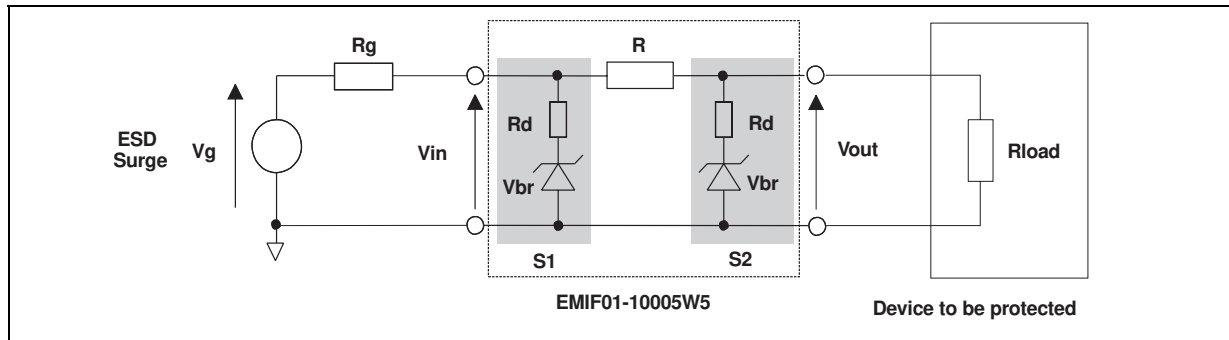

### ESD PROTECTION

In addition to its filtering function, the EMIF01-10005W5 is particularly optimized to perform ESD protection. ESD protection is based on the use of device which clamps at :

$$V_{CL} = V_{BR} + R_d \cdot I_{PP}$$

This protection function is splitted in 2 stages. As shown in figure A3, the ESD strikes are clamped by the first stage S1 and then its remaining overvoltage is applied to the second stage through the resistor R. Such a configuration makes the output voltage very low at the Vout level.

**Fig A3 : ESD clamping behavior**

To have a good approximation of the remaining voltages at both Vin and Vout stages, we provide the typical dynamical resistance value Rd. By taking into account these following hypothesis :  $R \gg R_d$ ,  $R_G \gg R_d$  and  $R_{load} \gg R_d$ , it gives these formulas:

$$V_{in} = \frac{R_g \cdot V_{br} + R_d \cdot V_g}{R_g}$$

$$V_{out} = \frac{R \cdot V_{br} + R_d \cdot V_{in}}{R}$$

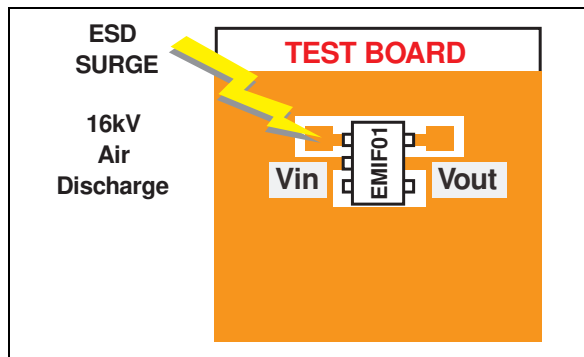

The results of the calculation done for  $V_G=8kV$ ,  $R_G=330\Omega$  (IEC1000-4-2 standard) and  $V_{BR}=7V$  (typ.) give:

$$V_{in} = 31.2 \text{ V}$$

$$\mathbf{V_{out} = 7.3 \text{ V}}$$

This confirms the very low remaining voltage across the device to be protected. It is also important to note that in this approximation the parasitic inductance effect was not taken into account. This could be few tenths of volts during few ns at the Vin side. This parasitic effect is not present at the Vout side due the low current involved after the resistance R.

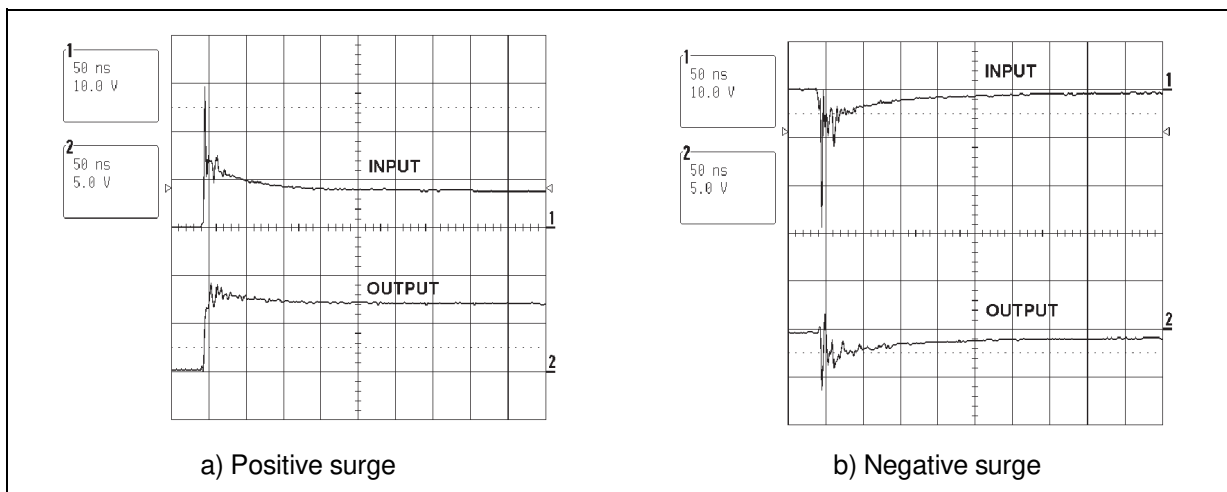

**Fig A4 : Measurement conditions**

The measurements shown here after illustrate very clearly (Fig. A5a) the high efficiency of the ESD protection :

- no influence of the parasitic inductances on Vout stage
- Vout clamping voltage very close to  $V_{BR}$

**Fig A5 :** Remaining voltage at both stages S1 ( $V_{in}$ ) and S2 ( $V_{out}$ ) during ESD surge

Please note that the EMIF01-10005W5 is not only acting for positive ESD surges but also for negative ones. For these kind of disturbances it clamps close to ground voltage as shown in Fig. A5b.

**NOTE: DYNAMIC RESISTANCE MEASUREMENT**

As the value of the dynamic resistance remains stable for a surge duration lower than  $20\mu\text{s}$ , the  $2.5\mu\text{s}$  rectangular surge is well adapted. In addition both rise and fall times are optimized to avoid any parasitic phenomenon during the measurement of  $R_d$ .

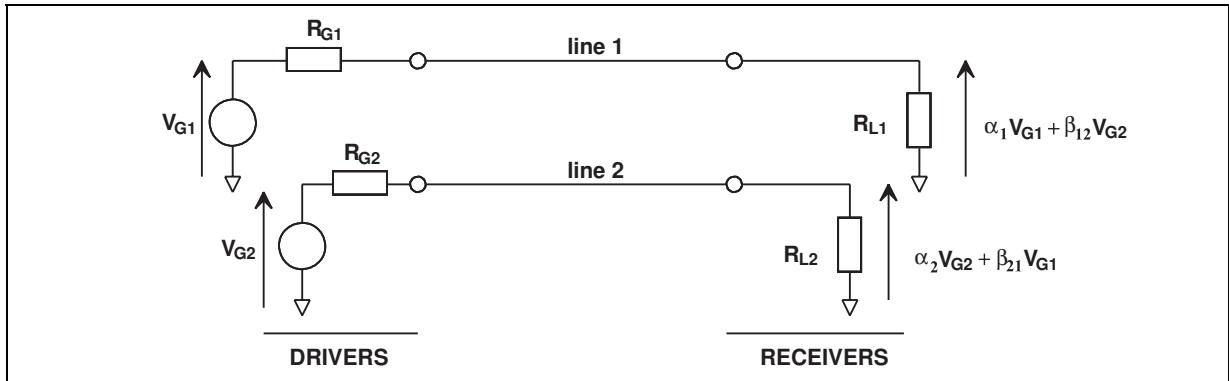

**Fig A6 :**  $R_d$  measurement current wave

**CROSSTALK BEHAVIOR**

**1- Crosstalk phenomena**

**Fig A7 :** Crosstalk phenomena

**2- Digital Crosstalk**

**Fig A8 :** Digital crosstalk measurement

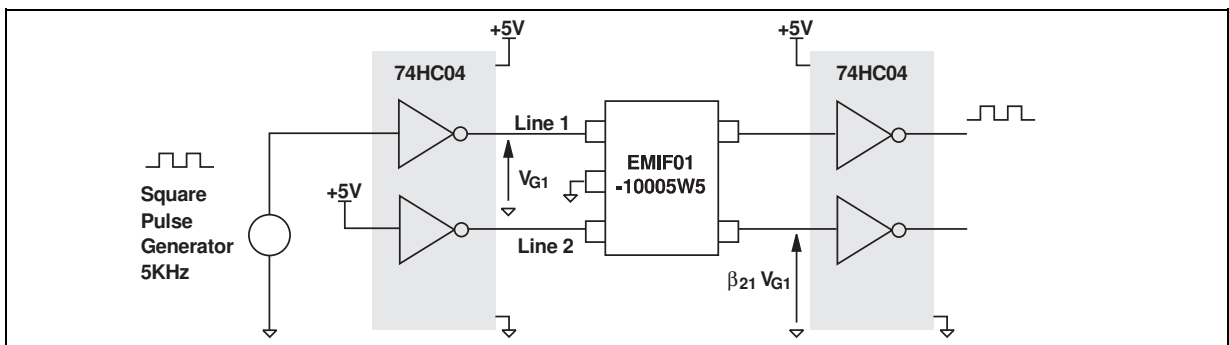

Figure A8 shows the measurement circuit used to quantify the crosstalk effect in a classical digital application.

Figure A9 shows that in such a condition signal from 0 to 5V and rise time of 3 ns, the impact on the disturbed line is less than 100mV peak to peak. No data disturbance was noted on the concerned line. The same results were obtained with falling edges.

**Fig A9 :** Digital crosstalk results

### 3- Analog Crosstalk

Fig A10 : Analog crosstalk measurement

Fig A11 : Typical analog crosstalk result

Figure A10 gives the measurement circuit for the analog application. In figure A11, the curve shows the effect of cell I/O1 on cell I/O2. In usual frequency range of analog signals (up to 100MHz) the effect on disturbed line is less than -43 dB.

**ORDER CODE**

Order code	Marking	Package	Weight	Base qty	Delivery mode
EMIF01-10005W5	M12	SOT323-5L	5.4 mg	3000	Tape & reel

PACKAGE MECHANICAL DATA

SOT323-5L

RECOMMENDED FOOTPRINT

Mechanical specifications	
Lead plating	Tin-lead
Lead plating thickness	5µm min. 25 µm max.
Lead material	Sn / Pb (70% to 90% Sn)
Lead coplanarity	100µm max.
Body material	Molded epoxy
Flammability	UL94V-0
