

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Preliminary Datasheet

FEATURES:

- Integrated Gate Driver
 - Low Propagation Delay
 - Up to 7 MHz Operation
 - Operates from 5 V Supply
- 200 V, 40-mΩ eGaN FET
- Low Inductance 2.9 mm x 1.1 mm BGA

EPC2112 devices are supplied only in passivated die form with solder balls

Die Size: 2.9 mm x 1.1 mm

APPLICATIONS:

- Wireless Power (Highly Resonant and Inductive)
- High Frequency DC-DC Conversion

Schematic Diagram

DESCRIPTION

The EPC2112 enhancement-mode gallium-nitride (eGaN®) integrated driver and FET consists of a 40-mΩ, 200 V eGaN power transistor and an optimized gate driver in a low inductance 2.9 mm by 1.1 mm surface-mount BGA.

The EPC2112 monolithic IC enables designers to improve efficiency, save space, and lower costs compared to silicon-based solutions. The ultra-low capacitance and zero reverse recovery of the eGaN FET enables efficient operation in many topologies. The integrated driver is specifically matched to the GaN device to yield optimal performance under various operating conditions. Performance further enhanced due to the small, low inductance footprint. Monolithic integration eliminates interconnect inductances for higher efficiency at high frequency. This is especially important for high frequency applications such as resonant wireless power.

RECOMMENDED LAND PATTERN

(Units in μm)

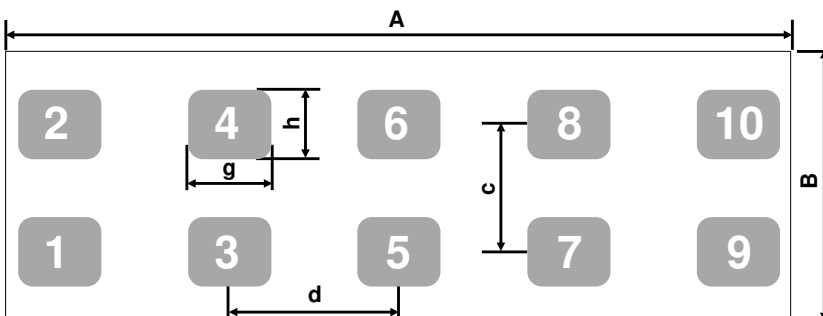

DIM	MICROMETERS
A	2900
B	1100
c	600
d	600
f	230

The land pattern is solder mask defined. Copper is larger than the solder mask opening.
