EVALUATION KIT CONTENTS

EVAL-ADM2483EBZ

GENERAL DESCRIPTION

The EVAL-ADM2483EBZ allows easy and quick evaluation of the isolated **ADM2483** RS-485 transceiver. The evaluation board allows all of the input and output functions to be exercised without the need for external components.

The **ADM2483** differential bus transceiver is an integrated, galvanically isolated component designed for bidirectional data communication on balanced, multipoint bus transmission lines. Using Analog Devices, Inc., *iCoupler*® technology, the **ADM2483** combines a 3-channel isolator, a three-state differential line driver, and a differential input receiver into a single package. The logic side of the device is powered with either a 5 V or 3 V supply, and the bus side uses only a 5 V supply.

EVALUATION BOARD CONFIGURATIONS

SETTING UP THE EVALUATION BOARD

The EVAL-ADM2483EBZ allows the isolated [ADM2483](#) RS-485 transceivers to be easily and quickly evaluated. The evaluation board allows all of the input and output functions to be exercised without the need for external components.

A termination resistor, RT, of 120 Ω is fitted on the receiver input. This can be removed if the board is connected to a bus already terminated at both ends. The value of the termination resistor should be equal to the characteristic impedance of the cable used.

The logic side is suitable for 5 V or 3 V operation on VDD1. There is a 0.1 μ F decoupling capacitor, C1, fitted between VDD1 and GND1. The bus side is suitable for 5 V operation on VDD2. There is a 0.1 μ F decoupling capacitor, C2, fitted between VDD2 and GND2.

If fail-safe biasing is required for other parts on the bus that do not have the offset receiver threshold of the ADM2483, bus biasing resistors can be fitted on the receiver input by inserting R1 and R2.

Refer to [AN-960 Application Note, RS-485/RS-422 Circuit Implementation Guide](#), for an explanation of bus termination and fail-safe biasing.
