

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DESCRIPTION

Thank you for choosing Altera Enpirion power products!

The EN5322 evaluation board is configured to provide a 1.2V output at up to 2A from a 2.4 V to 5.5 V input. The output can be set to 7 different voltages through the three VID output voltage select pins. It can also be adjusted from 0.6V to $(V_{IN} - 0.2 \times I_{LOAD})$ through the external resistor divider option.

The 4 MHz operation allows for the use of tiny MLCC capacitors. It also enables a very wide control loop bandwidth providing excellent transient performance and reduced output impedance. The internal compensation is designed for unconditional stability for all operating conditions. The Power OK signal is available.

FEATURES

- Input Voltage Range: 2.4 V – 5.5 V
- 7 Output Voltage Options via VID Pins
- Adjustable Output Voltage via External Resistor Divider
- 2A Load Current Guaranteed
- Fully Assembled and Tested

Applications

- Area Constrained Applications
- Data Networking Applications
- Wireless Data Cards
- Embedded/Industrial PC
- Set Top Box/Home Gateway
- LDO Replacement
- LP uProcessors, DSP, IO, Memory.

EVALUATION BOARD BILL OF MATERIALS

Ref Des	Qty	Description	Manufacturer P/N
C1	1	Ceramic Capacitor, 10 uF, 10 V, X7R, 0805	Murata: GRM21BR71A106KE51L
C2	1	Ceramic Capacitor, 470 pF, 50 V, X7R, 0805	Panasonic: ECJ-2VC1H471J
C3, C4	2	Ceramic Capacitor, 22 uF, 6.3 V, X5R, 0805	Panasonic: ECJ2FB0J226M
C11	1	Ceramic Capacitor, 1 uF, 6.3 V, X7R, 0603	Panasonic: ECJ1VB0J105K
U1	1	2 A PWM Converter	Altera Enpirion: EN5322QI-T
R4 ¹	1	Resistor, 2 kOHM, 1%, 1/8 W, 0805	Panasonic: ERJ-6ENF2001V
C8 ²	1	Electrolytic Capacitor, 150 uF, 10 V	Panasonic: EEVFK1A151P
C10 ²	1	Ceramic Capacitor, 10 uF, 10 V, X7R, 0805	Murata: GRM21BR71A106KE51L
D1 ²	1	TVS Unidirect, 600 W, 6.5 V	Littlefuse: SMBJ6.5A
FB1 ²	1	Multilayer Ferrite Bead, 4000MA, 0805	Würth: 742792012
J1 ²	1	Connector, Custom, Vertical Header	Samtec: ASP12192002
TP5-TP9 ²	5	Connector, Test Point	Keystone: 5016
C5, C6, C9, C12		Not Used	
R1, R2		Not Used	
TP1-TP2		Not Used	

Notes:

1. R4 is not required if POK is not used.
2. These components are only for demonstration purposes, and are not needed for circuit design.

EVALUATION BOARD CIRCUIT

QUICK START GUIDE

1. Preset Power Supply to $2.4\text{ V} \leq V_{IN} \leq 5.5\text{ V}$.
2. Turn Power Supply off.
3. Place jumper ENABLE at the left position to enable the EN5322. Placing jumper ENA at the right position will disable the EN5322.
4. Place jumper POK at the left position to connect pull up resistor R4 to VIN. Left the jumper open if the POK function is not used.
5. Place jumpers VS0, VS1, and VS2 according to the following table to set the desired output voltage.

Table 2: VID Code Setting

VS2	VS1	VS0	Output Voltage
R	R	R	3.3V
R	R	L	2.5V
R	L	R	1.8V
R	L	L	1.5V
L	R	R	1.25V
L	R	L	1.2V
L	L	R	0.8V
L	L	L	External Divider

The output voltage can also be set with an external resistor divider. Use a 340 kΩ, 1 % resistor for R1. Then the value of the bottom resistor R2 is given as:

$$R2 = \frac{204}{V_{OUT} - 0.6} k\Omega$$

where V_{OUT} is the output voltage. For example, if the desired output voltage is 1 V, R2 should be a 511 kΩ, 1% resistor.

6. Connect input power supply terminals to +VIN (TP8) and GND (TP5).
7. Connect load terminals to +VOUT (TP7) and GND (TP6).
8. Turn on the Power Supply after making connections.
9. The EN5322 will be enabled. The POK output can be observed at TP9. To observe noise-sensitive waveforms on input / output ripple and NC(SW), use the measurement technique as shown in Figure 5. Wrap bus wire around the GND portion of the bare probe and bring it close to the probe tip. Then solder the bus wire to the nearest GND on the board.
