Chipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Description

This document describes the specifications for the F1792 Wideband, Gain-Settable, Zero-Distortion™ Flat-Noise™, RF to IF Downconverting Mixer.

The F1792 offers very low power consumption with excellent linearity. In addition to this the F1792 has four dynamically adjustable gain settings. The F1792 performance is exceptional across an extremely broad range of RF and IF frequencies. All of this makes it ideal for a myriad of applications including:
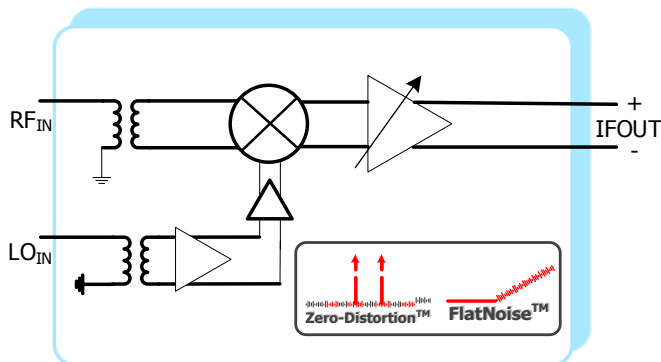

• 2G/3G/4G/5G/Multimode Remote Radio Units

• Point to Point µWave Backhaul systems

• Broadband Repeaters

• Public Safety Infrastructure

• Any radio system operating between 400 MHz and 4000 MHz

Competitive Advantage

F1792 offers maximum performance and flexibility at minimum power consumption. The unique and patented settable-gain feature allows it to be used in a very wide variety of radio card applications, even allowing for dynamic adjustment of gain to maximize performance on the fly. The extremely wide RF and IF bandwidths are achieved using a fixed BOM, all RF matching is internal to the device. The F1792 can function with as little as -6 dBm LO power. It also features a channel shutdown mode for ease of integration into high order TDD systems.

Features

• RF range: 400MHz to 3800MHz

• LO range: 400MHz to 3600MHz

• IF Range: 50MHz to 600MHz

• 4 Gain Settings; 11dB, 8dB, 5dB, 2dB

• 2 bit gain step control

• Ideal for Multi-Carrier Systems

• +35dBm OIP3

• Low Noise Figure at any gain setting via IDT's FlatNoise™ technology

• Z = 200 Ω IF balanced, 50 Ω RF, 50 Ω LO single ended

• All internally matched. Single BOM for all RF, LO and IF frequencies

• 4 mm x 4 mm, 24-pin TQFN package

• Independent Path Standby mode

• 75 nsec settling for gain adjustment
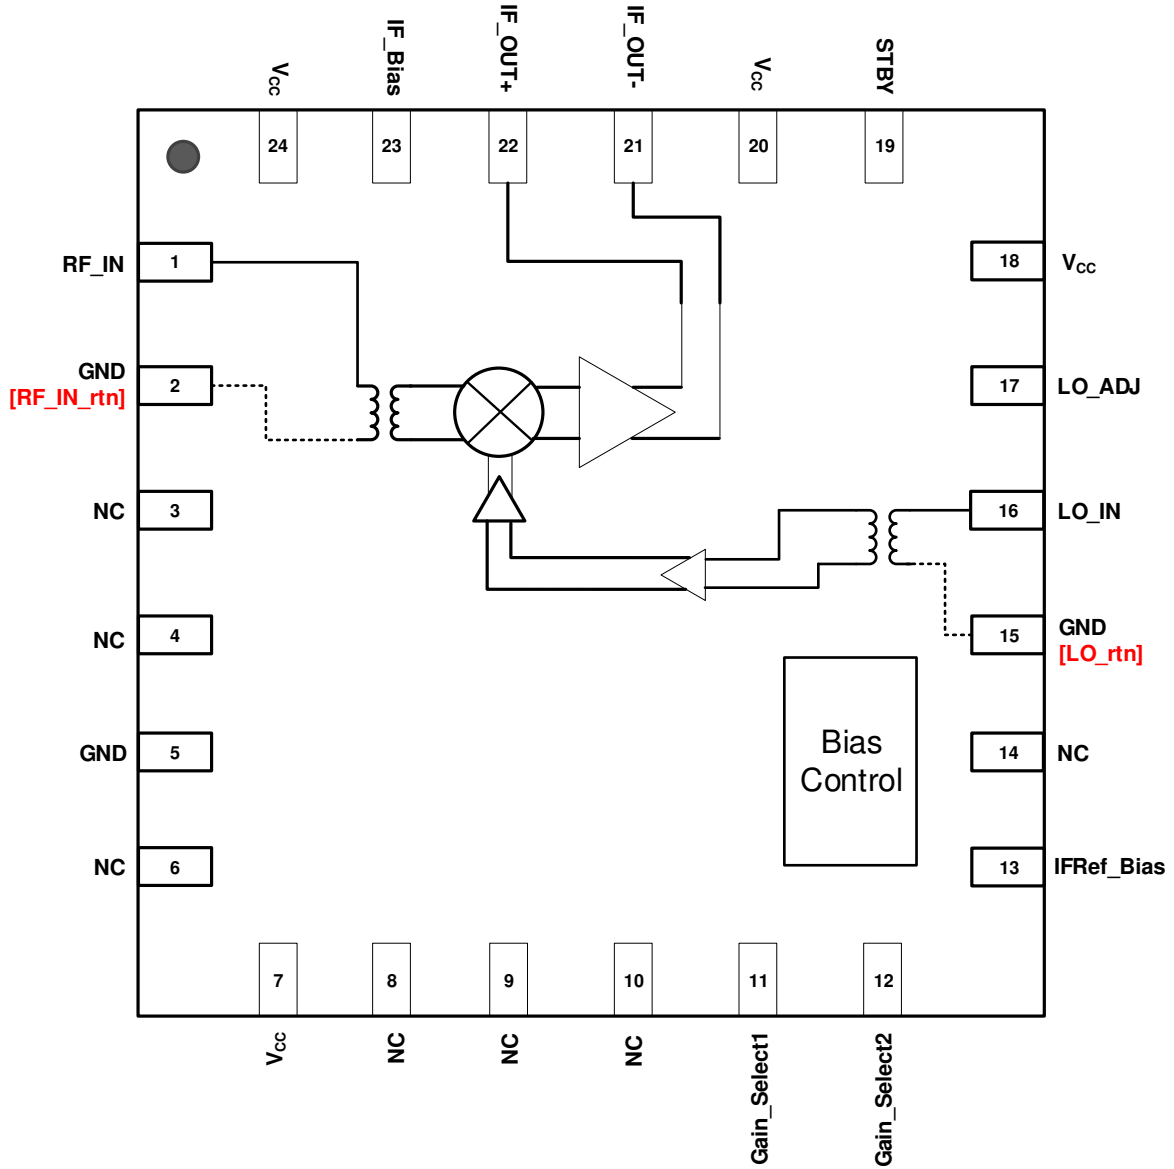

• VCC = 3.3V, 462 mW, 373 mW (low power mode)

Band Performance Summary

RF Frequency (MHz)	900	1900	2600	3500
Gain (dB, max G11 setting)	11.0	10.8	10.3	9.0
Gain (dB, min G2 setting)	2.5	2.3	1.8	0.5
NF @ max gain (dB)	8.9	8.7	10.0	10.9
IIP3 @ min gain (dBm)	28	27	29	30
OIP3 @ G8 (dBm)	37	34	35	35
IP1dB @ min gain (dBm)	13.6	14.7	14.6	15.8
Pdiss (mW)	442	462	485	520

Pin Descriptions

Table 1. F1792 Pin Descriptions

Number	Name	Description
1	RF_IN	RF input. Matched to 50 ohms. DO NOT apply DC to this pin.
2	RF_IN_rtn	RF input transformer ground return. Ground this pin.
3, 4, 6, 8, 9, 10, 14	NC	Not connected.
5	GND	Ground this pin.
7, 18, 20, 24	VCC	Power Supply. Bypass to ground with appropriate capacitors as close as possible to pin
11	Gain_Select1	Gain select control pin, includes internal pull-down resistor. See gain select truth table for desired setting
12	Gain_Select2	Gain select control pin, includes internal pull-down resistor. See gain select truth table for desired setting
13	IFRef_Bias	Connect recommended resistor value from this pin to ground to set the IF amplifier reference current
15	LO_IN_rtn	LO input transformer ground return. Ground this pin.
16	LO_IN	Local Oscillator (LO) input. Matched to 50 ohms. DO NOT apply DC to this pin.
17	LO_ADJ	Connect zero ohm resistor to ground here for best performance
19	STBY	Standby Input (Low/Open = Power ON, High = Power OFF). Includes internal pull-down resistor
21, 22	IF_OUT-, IF_OUT+	Mixer Differential IF Output. Connect pull-up inductors from each of these pins to VCC (see the Typical Application Circuit)
23	IF_Bias	Connect the specified resistor from this pin to ground to set the bias for the Main IF amplifier
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the specified RF performance

Absolute Maximum Ratings

Table 2. Absolute Maximum Ratings

Parameter	Symbol	Conditions	Minimum	Maximum	Units
VCC to GND	V_{CC}		-0.5	+3.6	V
STBY, Gain_Select1, Gain_Select2, RF_IN, LO1_ADJ, LO2_ADJ	V_{CTRL}		-0.5	Vcc+0.5	V
IF_OUT+, IF_OUT-	IF_{OUT}		2.4	Vcc+0.5	V
LO_IN	LO_{IN}		-0.5	+0.5	V
IF_Bias	IF_{BIAS}			50	Ohms
IF_Ref_Bias	IF_{REF}			500	Ohms
RF Input Power	RF_{MAX}	continuous		20	dBm
LO Input Power	LO_{MAX}	continuous		20	dBm
Continuous Power Dissipation	P_{DISS}			1.5	W
Junction temperature	T_J	-	-	150	°C
Storage temperature	T_S	-	-65	150	°C
Lead temperature	T_{LEAD}	(soldering, 10 seconds)		260	°C
ESD – Human Body Model (JEDEC/ESDA JS-001-2012)	-	-	-	Class 2 (2500)	V
ESD – Charged Device Model (JEDEC 22-C101F)	-	-	-	Class C3 (1000)	V

Stresses above those listed above may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability

Recommended Operating Conditions

Table 3. Recommended Operating Conditions

Parameter	Symbol	Minimum	Typical	Maximum	Units
Power supply voltage	V_{CC}	3.15	-	3.45	V
Operating temperature range	T_{CASE}	-40	-	105	°C
RF Frequency Range	F_{RF}	400		3800	MHz
Local Oscillator (LO) Frequency Range	F_{LO}	400		3600	MHz
Intermediate Frequency (IF) Range	F_{IF}	50		600	MHz
Local oscillator power level	P_{LO}	-6		+6	dBm

Electrical Characteristics

Table 4. IDTF1792 Specification (General)

Typical Application Circuit, V_{CC} = +3.3V, T_C = +25°C, F_{RF} = 900MHz, F_{IF} = 199MHz, F_{LO} = 1099MHz, P_{LO} = 0 dBm, P_{IN} = -10dBm per tone for all gain settings unless otherwise stated, STBY = LOW. EVkit IF transformer losses are de-embedded unless otherwise noted.

Parameter	Symbol	Conditions	Minimum	Typical	Maximum	Units
Logic Input High[3]	V_{IH}[3]	-	*1.1[1]*			V
Logic Input Low[3]	V_{IL}[3]	Minimum attenuation			*0.65*	V
Logic Current	I_{IH}, I_{IL}	For all control pins	*-5*		*+100*	mA
Supply Current	I_{CH_LB}	Low band LO		134	*154*	mA
Supply Current	I_{CH_MB}	Mid band LO		140	*160*	mA
Supply Current	I_{CH_HB}	High band LO		147	*166*	mA
Supply Current – reduced linearity		FRF = 2.2GHz, FLO = 2GHz OIP3 = +20dBm max gain IFRef_Bias resistor = 3.9Kohm		113	*135*	mA
Shutdown current	I_{SD}			3	*6*	mA
Settling Time	T_{SETT}	Pin = -13 dBm Gate STBY pin Time for IF Signal to settle from 50% STBY to within 90% of final value		340		nsec
		Pin = -13 dBm Gate STBY pin Time for IF Signal to settle from 50% STBY to within 0.1 dB of final value		920		nsec
		Pin = -13 dBm Gate Gain Select pins per Gain Control table Time for IF Signal to settle from 50% Gain Select to within 90% of final value		75		nsec
RFIN Impedance	Z_{RFIN}	Single Ended		50		Ω
LO Port Impedance	Z_{LO}	Single Ended		50		Ω
IF Output Impedance	Z_{IF}	Differential		200		Ω
IF Return Loss	RL_{IF}	Differential 200 ohm with 4:1 Balun		-15		dB
LO Return Loss	RL_{LO}	Single Ended 50 ohm		-15		dB

Thermal Characteristics

Table 12. Package Thermal and Moisture Characteristics

Symbol	Parameter	Value	Units
θ_{JA}	Theta JA. Junction to ambient.	45[a]	°C/W
θ_{JC}	Theta JC. Junction to case.	2.1	°C/W
-	Moisture Sensitivity Rating (Per J-STD-020)	MSL 1	-

Typical Performance Characteristics

TYPICAL OPERATING CONDITIONS (TOC)

Unless otherwise noted, the following apply to the Typ Ops Graphs

- High Side Injection for RF frequencies below 1.2 GHz

- Low Side Injection for RF frequencies from 1.3 to 2.7 GHz

- 199MHz IF

- 800KHz Tone Spacing

- All measurements fully de-embedded for trace, connector, transformer losses

- Pin = -10dBm for Gain

- Pout = 0 dBm/Tone for IP3

- LO level = 0 dBm, VCC = 3.30 V

- Listed Temperatures are Case Temperature (TC = Case Temperature)

- Where noted, TA or TAMB = Ambient Temperature]

NxM (dBc, Gset=5 dB, LO=1700 MHz, IF=200 MHz, RFfund=0 dBm at 1900 MHz, RFspur(MHz)=(N*LO(MHz)+IF(MHz))/M)
