Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### Description

The F2977 is a 50 $\Omega$  single-pole double-throw (SP2T) reflective RF switch featuring high linearity and wide bandwidth. This device is optimized from 30MHz to 6GHz to support a multitude of wireless RF applications. The F2977 uses a single positive supply voltage of either +3.3V or +5.0V and is compatible with either 1.8V or 3.3V control logic.

### **Competitive Advantage**

The F2977 provides extremely low insertion loss across the entire bandwidth while providing superb distortion performance.

- Low insertion loss
- High isolation
- Low distortion
- Fast switching
- No external matching required

### **Typical Applications**

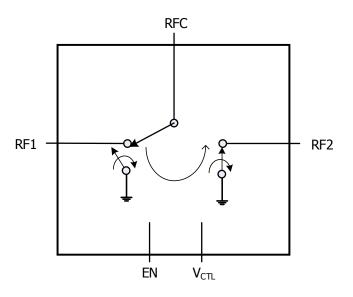

- Cellular BTS
- Cellular BTS small cell
- Transmit / Receive switching
- Post PA switching
- General purpose

### Features

- Low insertion loss:
  - 0.38dB at 2.4GHz
  - 0.45dB at 6GHz
- High Isolation:
  - 39dB at 2.4GHz
- High Linearity:
  - IIP2 +125dBm at 2.4GHz
  - IIP3 +77dBm at 2.4GHz
- P0.1dB compression of +40dBm at 2.4GHz
- Second Harmonic: -95dBc at 900MHz
- Third Harmonic: -90dBc at 900MHz
- Supply voltage: +2.7V to +5.25V
- 1.8V and 3.3V compatible control logic
- -40°C to +105°C operating temperature range
- 2mm x 2mm, 12-pin VFQFP-N package

### **Pin Descriptions**

#### Table 1.Pin Descriptions

Number	Name	Description
1	GND	Internally grounded. Connect pin directly to paddle ground or as close as possible to pin with thru vias.
2	RFC	RF Common Port. If this pin is not 0V DC, then an external coupling capacitor must be used.
3	GND	Internally grounded. Connect pin directly to paddle ground or as close as possible to pin with thru vias.
4	GND	Internally grounded. Connect pin directly to paddle ground or as close as possible to pin with thru vias.
5	RF1	RF1 Port. If this pin is not 0V DC, then an external coupling capacitor must be used.
6	GND	Internally grounded. Connect pin directly to paddle ground or as close as possible to pin with thru vias.
7	V <sub>CTL</sub>	Logic control pin.
8	EN	Active HIGH enable pin. If LOW, neither RF1 nor RF2 are connected to RFC. Pin is internally pulled up to 2.5V through a $500k\Omega$ resistor.
9	V <sub>CC</sub>	Power supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
10	GND	Internally grounded. Connect pin directly to paddle ground or as close as possible to pin with thru vias.
11	RF2	RF2 Port. If this pin is not 0V DC, then an external coupling capacitor must be used.
12	GND	Internally grounded. Connect pin directly to paddle ground or as close as possible to pin with thru vias.
	EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple ground vias are also required to achieve the specified RF performance.

### **Absolute Maximum Ratings**

Stresses beyond those listed below may cause permanent damage to the device. Functional operation of the device at these or any other conditions beyond those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### **Application Information**

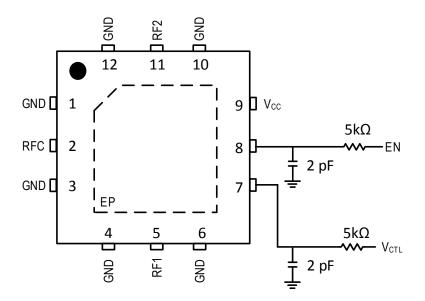

#### **Power Supplies**

A common  $V_{CC}$  power supply should be used for all pins requiring DC power. All supply pins should be bypassed with external capacitors to minimize noise and fast transients. Supply noise can degrade noise figure and fast transients can trigger ESD clamps and cause them to fail. Supply voltage change or transients should have a slew rate smaller than  $1V / 20\mu s$ . In addition, all control pins should remain at 0V (+/- 0.3V) while the supply voltage ramps up or while it returns to zero.

#### **Control Pin Interface**

If control signal integrity is a concern and clean signals cannot be guaranteed due to overshoot, undershoot, ringing, etc., the following circuit at the input of each control pin is recommended. This applies to control pins 7 and 8 as shown below.

### **Evaluation Kit (EVKit) Operation**

#### **External Supply Setup**

Set up a V<sub>CC</sub> power supply in the voltage range of +2.7V to +5.25V with the power supply output disabled.

Connect the disabled V<sub>CC</sub> supply connection to J6 pin 3 and GND to J6 pin 1, 2, 4, 6, 8, 9, or 10.

#### **Logic Control Setup**

With the logic control lines disabled, set the HIGH and LOW logic levels to satisfy the levels stated in the electrical specifications table.

Connect the disabled logic control lines to J6 EN / LS (pin 5) and  $V_{CTL}$  (pin 7).

See Table 8 for the logic truth table.

#### **Turn On Procedure**

Setup the supplies and EVKit as noted in the External Supply Setup and Logic Control Setup sections above.

Enable the V<sub>CC</sub> supply.

Enable the logic control signals.

Set the logic setting to achieve the desired Table 8 configuration. Note that external control logic should not be applied without  $V_{CC}$  being present.

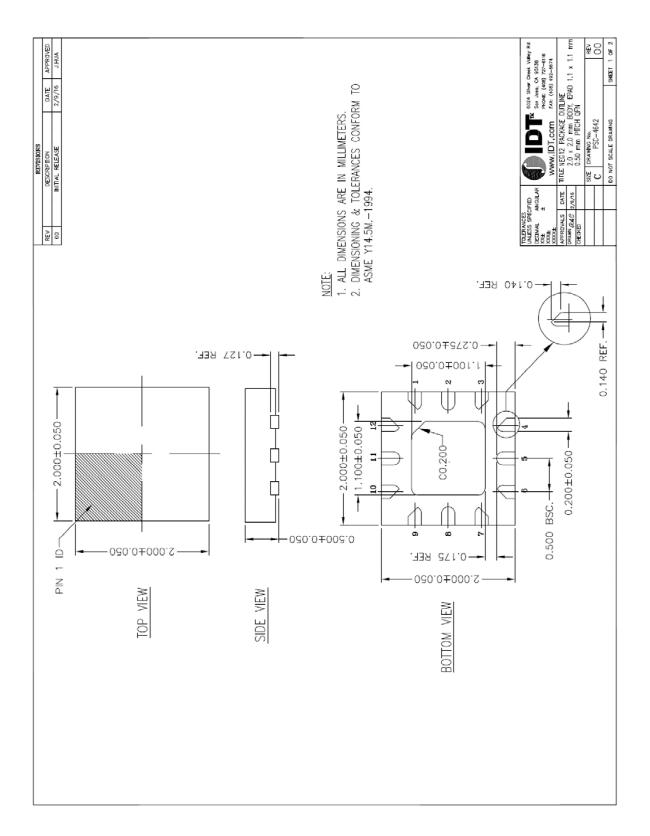

#### **Turn Off Procedure**

Set the logic control pins to a logic LOW.

Disable the  $V_{CC}$  supply.
