

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### **FDS6900AS**

# Dual N-Ch PowerTrench® SyncFET<sup>™</sup> General Description

The FDS6900AS is designed to replace two single SO-8 MOSFETs and Schottky diode in synchronous DC:DC power supplies that provide various peripheral voltages for notebook computers and other battery powered electronic devices. FDS6900AS contains two unique 30V, N-channel, logic level, PowerTrench MOSFETs designed to maximize power conversion efficiency.

The high-side switch (Q1) is designed with specific emphasis on reducing switching losses while the low-side switch (Q2) is optimized to reduce conduction losses. Q2 also includes an integrated Schottky diode using Fairchild's monolithic SyncFET technology.

#### **Features**

 Q2: Optimized to minimize conduction losses Includes SyncFET Schottky body diode

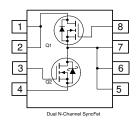

8.2A, 30V 
$$R_{DS(on)} = 22m\Omega$$
 @  $V_{GS} = 10V$   $R_{DS(on)} = 28m\Omega$  @  $V_{GS} = 4.5V$ 

 Q1: Optimized for low switching losses Low Gate Charge (11nC typical)

6.9A, 30V 
$$R_{DS(on)} = 27m\Omega @ V_{GS} = 10V$$
 
$$R_{DS(on)} = 34m\Omega @ V_{GS} = 4.5V$$

• 100% R<sub>G</sub> (Gate Resistance) Tested

### Absolute Maximum Ratings T<sub>A</sub> = 25°C unless otherwise noted

#### Notes

1.  $R_{0,1A}$  is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins.  $R_{0,C}$  is guaranteed by design while  $R_{0,CA}$  is determined by the user's board design.

a) 78°C/W when mounted on a 0.5in² pad of 2 oz copper

125°C/W when mounted on a 0.02 in<sup>2</sup> pad of 2 oz copper

135°C/W when mounted on a minimum pad.

### Typical Characteristics (continued)

# SyncFET Schottky Body Diode Characteristics

Fairchild's SyncFET process embeds a Schottky diode in parallel with PowerTrench MOSFET. This diode exhibits similar characteristics to a discrete external Schottky diode in parallel with a MOSFET. **Figure 23** shows the reverse recovery characteristic of the FDS6900AS.

Time: 10nS/DIV

Figure 23. FDS6900AS SyncFET body diode reverse recovery characteristic.

For comparison purposes, **Figure 24** shows the reverse recovery characteristics of the body diode of an equivalent size MOSFET produced without SyncFET (FDS6690).

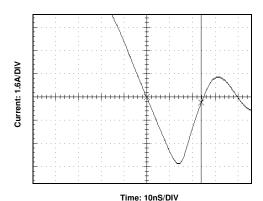

Figure 24. Non-SyncFET (FDS6690) body diode reverse recovery characteristic.

Schottky barrier diodes exhibit significant leakage at high temperature and high reverse voltage. This will increase the power in the device.
