

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# FLD00042

## I<sup>2</sup>C Digital Ambient Light Sensor

### Features

- Built-in temperature compensation circuit
- Operating temperature: -30°C to 70°C
- Supply voltage range: 2.4V to 3.6V
- I<sup>2</sup>C serial port communication: Fast 400kHz
- Light sensing
  - Full dynamic range: 0.01 Lux to 64,000 Lux
  - High resolution range: 0.01 Lux to 320 Lux
  - 16-bit effective resolution
  - 50Hz/60Hz rejection
  - Immunity to IR and UV light
- Size: 2.65mm(L) x 2.00mm(W) x 0.70mm(H)
- Halogen free

### Applications

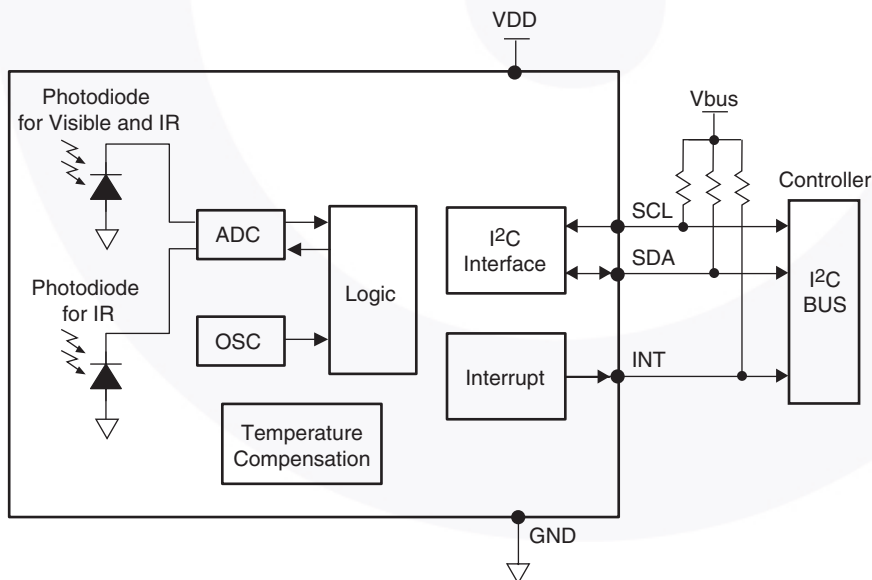

- Display backlight control for smart phones
- Laptops, desktops, monitors
- LCD TV

### Description

The FLD00042 is a digital-output light sensor with a two-wire, I<sup>2</sup>C serial interface. It combines two photodiodes with signal processing on a single CMOS integrated circuit to provide a linear response over an effective 16-bit dynamic range from virtually 0 Lux to 64,000 Lux.

The FLD00042 includes an interrupt mode that signals to the controller readings exceeding a maximum threshold.

### Block Diagram

### Pinout

VDD	1	8	SDA
GND	2	7	SCL
NC	3	6	INT
NC	4	5	NC

(Top View)

## Pin Definitions

Pin	Symbol	I/O Type	Description
1	VDD		Power Supply Voltage.
2	GND		Ground.
3	NC		Not Connected.
4	NC		Not Connected.
5	NC		Not Connected.
6	INT	O	Level Interrupt. This pin is an open drain output.
7	SCL	I	I <sup>2</sup> C Serial Clock. This pin is an open drain input.
8	SDA	I/O	I <sup>2</sup> C Serial Data. This pin is an open drain input / output.

## Absolute Maximum Ratings (T<sub>A</sub> = 25°C)

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Min.	Max.	Unit
V <sub>DD</sub>	Supply Voltage	-0.5	3.8	V
V <sub>O</sub>	Digital Output Voltage	-0.5	3.8	V
I <sub>O</sub>	Digital Output Current	-1	+20	mA
T <sub>STG</sub>	Storage Temperature	-40	+85	°C
T <sub>OPR</sub>	Operating Temperature	-30	+70	°C

## Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the data sheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

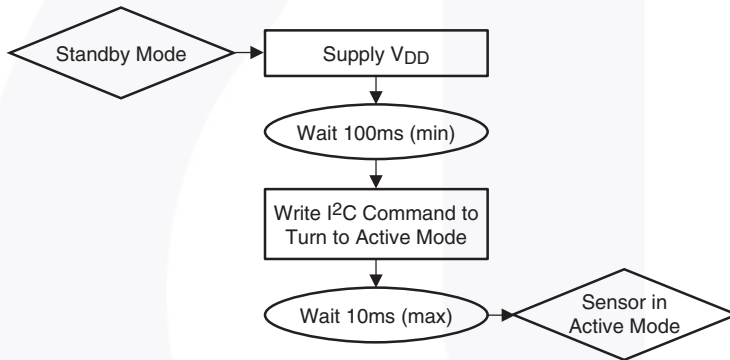

Symbol	Parameter	Min.	Max.	Unit
V <sub>DD</sub>	Supply Voltage	2.4	3.6	V
V <sub>BUS</sub>	Bus Supply Voltage	1.7	3.6	V
V <sub>IH</sub>	I <sup>2</sup> C Bus Input High (SCL/SDA)	1.2		V
V <sub>IL</sub>	I <sup>2</sup> C Bus Input Low (SCL/SDA)		0.6	V

### Electrical/Optical Characteristics (T<sub>A</sub> = 25°C and V<sub>DD</sub> = 3.0V)

Symbol	Parameter	Test Condition	Min.	Typ.	Max.	Unit
I <sub>dd1</sub>	Active Supply Current	Active Mode		200	300	μA

0x92	R/W	RESERVED	Reserved register	0x00
0x93	R/W	RESERVED	Reserved register	0x00
0x97	R/W	ALS_THRES_UP_0	ALS interrupt upper threshold, lower byte	0xFF
0x98	R/W	ALS_THRES_UP_1	ALS interrupt upper threshold, upper byte	0xFF
0x99	R/W	ALS_THRES_LOW_0	ALS interrupt lower threshold, lower byte	0x00
0x9A	R/W	ALS_THRES_LOW_1	ALS interrupt lower threshold, upper byte	0x00
0x9E	R/W	INTERRUPT PERSIST	ALS Interrupt persist setting	0x00

### Notes:

- When reading ALS data registers, read sequence should always be from lower address to higher address (e.g., for ALS data, Ch1 data should be read first followed by Ch0 data. Read sequence should be 0x88, 0x89, 0x8A, 0x8B. When 0x8B is read, all four ALS data registers will be populated with new set of data).
- When setting of INTERRUPT register (addr 0x8F) is necessary, it should be done before the device is in Active mode.
- Reserved registers should not be written with any value other than its default value.

## Register Bit Definitions

### ALS\_CONTR Register (0x80)

The ALS\_CONTR register controls the ALS operation modes and software (SW) reset for the sensor. The ALS sensor can be set to either standby mode or active mode. At either of these modes, the I<sup>2</sup>C circuitry is always active. The default mode after power up is standby mode. During standby mode, there is no ALS measurement performed but I<sup>2</sup>C communication is allowed to enable read/write to all the registers.

ALS_CONTR (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
Reserved				ALS Gain	SW Reset	ALS Mode	

Field	Bits	Description
Reserved	7:4	Must write as 0
ALS Gain	3	0: Dynamic Range 2 (2 lux to 64k lux) (default) 1: Dynamic Range 1 (0.01 lux to 320 lux)
SW Reset	2	0: Software reset is NOT started (default) 1: Software reset is started, default value after reset is 0
ALS Mode	1:0	00 / 01: Standby Mode (default) 10 / 11: Active Mode

### ALS\_MEAS\_RATE Register (0x85)

The ALS\_MEAS\_RATE register controls the integration time and timing of the periodic measurement of the ALS in active mode. ALS Measurement Repeat Rate is the interval between ALS\_DATA registers update. ALS Integration Time is the measurement time for each ALS cycle.

ALS Measurement Repeat Rate must be set to be equal or larger than the ALS Integration Time.

If ALS Measurement Repeat Rate is set to be smaller than ALS Integration Time, it will be automatically reset to be equal to ALS Integration Time by the IC internally.

ALS_MEAS_RATE (default = 0x03)							
B7	B6	B5	B4	B3	B2	B1	B0
Reserved			ALS Integration Time		ALS Measurement Repeat Rate		

Field	Bits	Description
Reserved	7:5	Must write as 0
ALS Integration Time	4:3	00: 100ms (default) 01: 50ms (can only be used in Dynamic Range 2, effective resolution is 15-bit @ 2 lux / count) 10: 200ms (can only be used in Dynamic Range 1) 11: 400ms (can only be used in Dynamic Range 1)
ALS Measurement Repeat Rate	2:0	000: 50ms 001: 100ms 010: 200ms 011: 500ms (default) 100: 1000ms 101 / 110 / 111: 2000ms

### PART\_ID Register (0x86) (Read Only)

The PART\_ID register defines the part number and revision identification of the sensor.

PART_ID (default = 0x80)							
B7	B6	B5	B4	B3	B2	B1	B0
Part Number ID				Revision ID			

Field	Bits	Description
Part Number ID	7:4	0x08H
Revision ID	3:0	0x00H

### MANUFAC\_ID Register (0x87) (Read Only)

The MANUFAC\_ID register defines the manufacturer identification of the sensor.

MANUFAC_ID (default = 0x05)							
B7	B6	B5	B4	B3	B2	B1	B0
Manufacturer ID							

Field	Bits	Description
Manufacturer ID	7:0	0x05H

### ALS\_DATA\_CH1 Register (0x88/0x89) (Read Only)

The ALS\_DATA registers should be read as a group, with the lower address read back first (i.e., read 0x88 first, then read 0x89). These two registers should also be read before reading channel-0 data (from registers 0x8A, 0x8B).

When the I<sup>2</sup>C read operation starts, all four ALS data registers are locked until the I<sup>2</sup>C read operation of register 0x8B is completed. This will ensure that the data in the registers is from the same measurement even if an additional integration cycle ends during the read operation. New measurement data is stored into temporary registers and the ALS\_DATA registers are updated as soon as there is no on-going I<sup>2</sup>C read operation.

The ALS ADC channel-1 data is expressed as a 16-bit data spread over two registers. The ALS\_DATA\_CH1\_0 and ALS\_DATA\_CH1\_1 registers provide the lower and upper byte respectively.

#### 0x88

ALS_DATA_CH1_0 (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Data Ch1 Low							

#### 0x89

ALS_DATA_CH1_1 (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Data Ch1 High							

Field	Addr	Bits	Description
ALS Data Ch1 Low	0x88	7:0	ALS ADC channel 1 lower byte data
ALS Data Ch1 High	0x89	7:0	ALS ADC channel 1 upper byte data

### ALS\_DATA\_CH0 Register (0x8A/0x8B) (Read Only)

These two registers should be read after reading channel-1 data (from registers 0x88, 0x89). Lower address register should be read first (i.e read 0x8A first, then read 0x8B). See ALS\_DATA\_CH1 register information above.

The ALS ADC channel-0 data is expressed as a 16-bit data spread over two registers. The ALS\_DATA\_CH0\_0 and ALS\_DATA\_CH0\_1 registers provide the lower and upper byte respectively.

#### 0x8A

ALS_DATA_CH0_0 (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Data Ch0 Low							

#### 0x8B

ALS_DATA_CH0_1 (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Data Ch0 High							

Field	Addr	Bits	Description
ALS Data Ch0 Low	0x8A	7:0	ALS ADC channel 0 lower byte data
ALS Data Ch0 High	0x8B	7:0	ALS ADC channel 0 upper byte data

### ALS\_STATUS Register (0x8C) (Read Only)

The ALS\_STATUS register stores the information about interrupt status and ALS data status. New data means data has not been read yet. When the measurement is completed and data is written to the data register, the data status bit will be set to logic 1. When the data register is read, the data status bit will be set to logic 0.

Interrupt status determines if the ALS interrupt criteria are met. It will check if the ALS measurement data is outside of the range defined by the upper and lower threshold limits.

ALS_STATUS (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
Reserved			ALS Gain	ALS Interrupt Status	ALS Data Status	Reserved	Reserved

Field	Bits	Description
Reserved	7:5	Do not care
ALS Gain	4	0: ALS measurement data is in dynamic range 2 (2 to 64k lux) 1: ALS measurement data is in dynamic range 1 (0.01 to 320 lux)
ALS Interrupt Status	3	0: ALS interrupt is clear or not yet triggered 1: ALS interrupt is triggered
ALS Data Status	2	0: ALS measurement data is old data (Data has been read) 1: ALS measurement data is new data (Data has not been read)
Reserved	1:0	Do not care

### INTERRUPT Register (0x8F)

The INTERRUPT register controls the operation of the interrupt pin and functions. When the Interrupt Mode is set to 00, the INT output pin 2 is inactive / disabled and will not trigger any interrupt. However at this condition, the ALS\_STATUS register will still be updated.

Note that when this register is to be set with values other than its default values, it should be set before device is in Active mode.

INTERRUPT (default = 0x08)							
B7	B6	B5	B4	B3	B2	B1	B0
Reserved					Interrupt Polarity	Interrupt Mode	

Field	Bits	Description
Reserved	7:4	Must write as 0
Reserved	3	Do not care
Interrupt Polarity	2	0: INT output pin 2 is considered active when it is a logic 0 (default) 1: INT output pin 2 is considered active when it is a logic 1
Interrupt Mode	1:0	00: INT output pin 2 is inactive / high impedance state (default) 01: Reserved 10: ALS measurement can trigger interrupt 11: Reserved

**ALS\_THRES Register (0x97 / 0x98 / 0x99 / 0x9A)**

The ALS\_THRES\_UP and ALS\_THRES\_LOW registers determines the upper and lower limit of the interrupt threshold value respectively. These two values form a range and the interrupt function compares if the measurement value in ALS\_DATA registers is inside or outside the range. The interrupt function is active if the measurement data is outside the range defined by the upper and lower limits. The data format for ALS\_THRES must be the same as ALS\_DATA registers.

**0x97**

ALS_THRES_UP_0 (default = 0xFF)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Upper Threshold Low							

**0x98**

ALS_THRES_UP_1 (default = 0xFF)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Upper Threshold High							

**0x99**

ALS_THRES_LOW_0 (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Lower Threshold Low							

**0x9A**

ALS_THRES_LOW_1 (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
ALS Lower Threshold High							

Field	Addr	Bits	Description
ALS Upper Threshold Low	0x97	7:0	ALS upper threshold lower byte
ALS Upper Threshold High	0x98	7:0	ALS upper threshold upper byte
ALS Lower Threshold Low	0x99	7:0	ALS lower threshold lower byte
ALS Lower Threshold High	0x9A	7:0	ALS lower threshold upper byte

### INTERRUPT PERSIST Register (0x9E)

The INTERRUPT PERSIST register controls the N number of times the measurement data is outside the range defined by the upper and lower threshold limits before asserting the INT output pin 2.

INTERRUPT PERSIST (default = 0x00)							
B7	B6	B5	B4	B3	B2	B1	B0
Reserved				ALS Persist			

Field	Bits	Description
Reserved	7:4	Must write as 0
ALS Persist	3:0	0000: Every ALS measurement data will generate an interrupt (default) 0001: 1 consecutive ALS measurement data outside the range 0010: 2 consecutive ALS measurement data outside the range ... 1111: 15 consecutive ALS measurement data outside the range

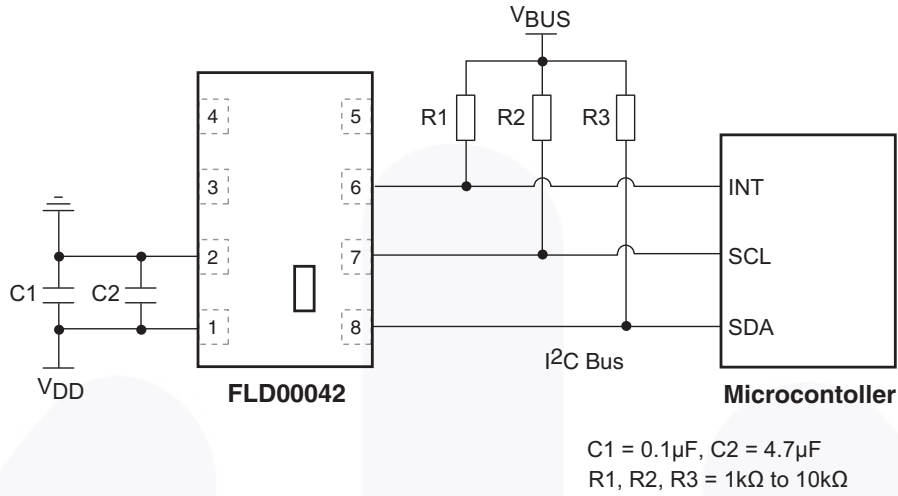

**Package Dimensions**

- Note:**
1. All units in mm.
  2. Tolerances:  $\pm 0.2$ mm

## Typical Application Circuit

## Optical Design Recommendations

The performance of the device in the application depends on its characteristics as well as the way the device is mounted on the end system.

The critical aspect of the end system mechanical design is the optimization of the optical path between the device and the space around, which is governed by:

- The size of the glass or plastic window so that light is not blocked by the adjacent opaque surfaces.
- The thickness of the window.
- The transmittance of the window material.
- The distance from the device to the window.

The dimensional recommendations are shown in the diagram below.

NOTE: Not to scale

**Side View of Recommended Mounting**

Regarding the transmittance, the window material should be selected based on its transmittance in the visible spectrum and the infrared spectrum (400nm to 900nm).

**Tape and Reel Dimensions**

**Note:**

1. All units in mm.
2. Empty component pockets sealed with top cover tape
3. 7 inch reel: 2,500 pieces per reel
4. In accordance with ANSI/EIA 481-1-A-1994 specifications

### Reflow Profile

**Notes:**

1. Reflow soldering should not be done more than twice.
2. When soldering, do not put stress on the devices during heating.
3. After soldering, do not warp the circuit board.

Symbol	Process Zone	ΔTemp	Maximum ΔTemp/ΔTime or Duration
R1	Heat Up	25°C to 150°C	3°C/s
R2	Solder Paste Dry	150°C to 200°C	100s to 180s
R3	Solder Reflow	200°C to 260°C	3°C/s
R4		260°C to 200°C	-6°C/s
R5	Cool Down	200°C to 25°C	-6°C/s
Time Maintained Above Liquidus Point, 217°C		>217°C	60 to 90 seconds
Peak Temperature		260°C	
Time Within 5°C of Actual Peak Temperature		>255°C	20 seconds
Time 25°C to Peak Temperature		25°C to 260°C	8 minutes

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

**ANTI-COUNTERFEITING POLICY**

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

**PRODUCT STATUS DEFINITIONS**

**Definition of Terms**

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.

ON Semiconductor and  are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
