## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Fault Protection Switch with Current Fold-back

## Features

- Up to 100 V input voltage protection
- Low on resistance - $4.0 \Omega$ typical
- Fast switching speed
- No external supplies needed

## Applications

- Power supplies
- Fast resettable fuse
- High side switches
- Data acquisition

## General Description

The Supertex FP0100 is a high voltage fault protection switch with current fold-back. It is designed to protect system output power supplies against over-current or short circuit conditions. In protection mode, the FP0100 limits the current to $300 \mu \mathrm{~A}$.

The FP0100 can be considered as a normally closed switch with a typical switch resistance of $4.0 \Omega$. The peak current allowed to pass through the switch can be set by an external resistor across VOUT and RSEN. Once the voltage drop across VIN and VOUT exceeds a nominal value of 3.0 V , the input current will fold-back to $300 \mu \mathrm{~A}$. In the off state, the FP0100 can withstand up to 100 V . Higher input voltages can be accommodated by using an external depletion-mode MOSFET. Please refer to Figure 4 for more details. The FP0100 is available in a SOT-89 package.

## Typical Application Circuit

## Ordering Information

| Part Number | Package | Packing |
| :--- | :--- | :--- |
| FP0100N8-G | 3-Lead SOT-89 | 2000/Reel |

-G denotes a lead (Pb)-free / RoHS compliant package

## Absolute Maximum Ratings

| Parameter | Value |
| :--- | ---: |
| $\mathrm{V}_{\mathbb{I} \text { }}-\mathrm{V}_{\text {out }}$, differential input voltage range | 0 to +110 V |
| Maximum junction temperature | $+125^{\circ} \mathrm{C}$ |
| Storage temperature range | $-65^{\circ}$ to $+150^{\circ} \mathrm{C}$ |
| Power dissipation, $\mathrm{T}_{\mathrm{A}} @ 25^{\circ} \mathrm{C}$ | $1.6 \mathrm{~W}^{1}$ |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

## Pin Configuration

TO-243AA (SOT-89)

## Product Marking

$Y=$ Code for year sealed
$W=$ Code for week sealed $\underline{ }=$ "Green" Packaging

Package may or may not include the following marks: Si or (\$i)
TO-243AA (SOT-89)
Typical Thermal Resistance

| Package | $\boldsymbol{\theta}_{\text {ja }}$ |
| :--- | :--- |
| 3-Lead SOT-89 | $133^{\circ} \mathrm{C} / \mathrm{W}$ |

## Note:

1. Mounted on FR4 board, $25 \mathrm{~mm} \times 25 \mathrm{~mm} \times 1.57 \mathrm{~mm}$.

Electrical Characteristics $\left(T_{A}=25^{\circ} \mathrm{Cunless}\right.$ otherwise specified $)$

| Sym | Parameter | Min | Typ | Max | Units | Conditions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Block Diagram

Figure 1. Typical I-V Characteristics

Figure 2. Test Circuit for $\mathrm{I}_{\text {peak }}$ vs $\mathrm{R}_{\text {sen }}$

The input peak current, $I_{\text {PEAK }}$, can be lowered by adding an external resistor across the RSEN and VOUT pins as shown in the test circuit in Figure 2. I PEAK will decrease as the resis-
tor value of $R_{\text {SEN }}$ increases. The typical $I_{\text {PEAK }} v s R_{\text {SEN }}$ characteristic is shown in Figure 3.

Figure 3. Typical $\mathrm{I}_{\text {PEAK }}$ vs $\mathrm{R}_{\text {SEN }}$ Characteristic

## Figure 4. Higher Input Voltage Application

Figure 5. Short Circuit Test Performance

The FP0100 has a typical response time of less than 30ns. The short circuit test set-up is shown in Figure 5. The output is at 60 V prior to a short. A $10 \Omega$ resistor is used to measure the current going into the FP0100. A 220nF ceramic capacitor is added on the input to supply any transient currents that
might occur. The waveform is shown in Figure 6. Channel 1 is the output voltage which is discharged to 0 V . Channel 2 is the voltage across the $10 \Omega$ resistor. The input current peaks to 400 mA then decays quickly within 20 ns .

Figure 6. Typical Short Circuit Waveforms

Pin Description

| Pin \# | Pin Name | Description |
| :---: | :--- | :--- |

| 1 | VIN | Input voltage |
| :---: | :---: | :--- |
| 2,4 | VOUT | Output voltage |
| 3 | RSEN | Current sense for $\mathrm{I}_{\text {PEAK }}$ control. Connects to an external resistor across the RSEN and VOUT <br> pins to set the $\mathrm{I}_{\text {PEAK. }}$ |
