

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Is Now Part of

ON Semiconductor®

**To learn more about ON Semiconductor, please visit our website at
www.onsemi.com**

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FSA3230 — High-Speed USB2.0 / Mobile High-Definition Link (MHL™) with Negative Swing Audio

Features

- Low On Capacitance: 6 pF / 6 pF MHL / USB (Typical)
- Low Power Consumption: 30 μ A Maximum
- Supports MHL Rev. 2.0
- MHL Data Rate: 4.0 Gbps
- Audio Swing: -1.5 V to +1.5 V (Typical)
- V_{BUS} Powers Device with No V_{CC}
- Packaged in 16-Lead UMLP (1.8 x 2.6 mm)
- Over-Voltage Tolerance (OVT) on all USB Ports, Up to 5.25 V without External Components

Applications

- Cell Phones and Digital Cameras

Description

The FSA3230 is a bi-directional, low-power, high-speed, 3:1, USB2.0, MHL™ and audio switch. Configured as a double-pole, triple-throw (DP3T) switch, it is optimized for switching between high- or full-speed USB, Mobile High-Definition Link sources (per MHL Rev. 2.0 specification) and negative swing capable audio. A Single-Pole, Double-Throw (SPDT) switch is provided for ID. This ID switch provides path to support On-The-Go (OTG) communication for the USB Path OR CBUS for the MHL Path.

The FSA3230 contains special circuitry on the switch I/O pins, for applications where the V_{CC} supply is powered off ($V_{CC}=0$), that allows the device to withstand an over-voltage condition. This switch is designed to minimize current consumption even when the control voltage applied to the control pins is lower than the supply voltage (V_{CC}). This is especially valuable in mobile applications, such as cell phones; allowing direct interface with the general-purpose I/Os of the baseband processor. Other applications include switching and connector sharing in portable cell phones, digital cameras, and notebook computers.

Ordering Information

Part Number	Top Mark	Operating Temperature Range	Package
FSA3230UMX	LK	-40 to +85°C	16-Lead, Ultrathin Molded Leadless Package (UMLP), 1.8 x 2.6 mm

Analog Symbol

Figure 1. Analog Symbol

Table 1. Data Switch Select Truth Table

SEL1 ⁽¹⁾	SEL0 ⁽¹⁾	Shunt	Function
0	0	Enable	D+/D- connected to USB+/USB-; ID connected to ID_USB
0	1	Disable	D+/D- connected to R/L; ID connected to ID_USB
1	0	Enable	D+/D- connected to MHL+/MHL; ID connected to CBUS
1	1	Enable	D+/D- high impedance; ID Hi-Z

Note:

- Control inputs should never be left floating or unconnected. To guarantee default switch closure to the USB position, the SEL[0:1] pins should be tied to GND with a weak pull-down resistor (3 MΩ) to minimize static current draw.

Pin Configuration

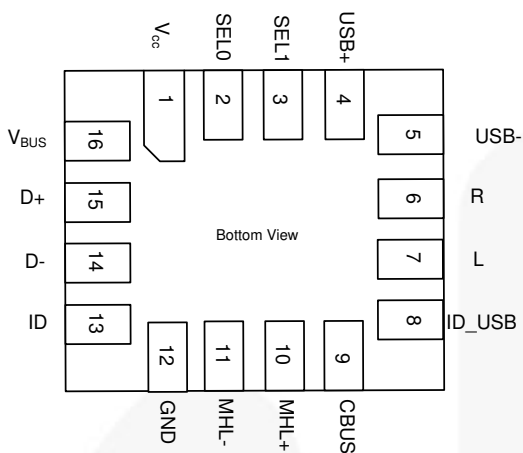

Figure 2. Pin Assignments

Figure 3. Top Through View

Pin Definitions

Pin	Name	Description
1	V _{CC}	V _{CC} Supply
2	SEL0	Control Pin
3	SEL1	Control Pin
4	USB+	USB Differential Data (Positive)
5	USB-	USB Differential Data (Negative)
6	R	Audio R (Negative Swing)
7	L	Audio L (Negative Swing)
8	ID_USB	ID for USB Host
9	CBUS	CBUS for MHL Host
10	MHL+	MHL Differential Data (Positive)
11	MHL-	MHL Differential Data (Negative)
12	GND	Ground
13	ID	Common Data Path for ID
14	D-	Common Data Path D-
15	D+	Common Data Path D+
16	V _{BUS}	V _{BUS} Pin from Micro-USB Connector

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter		Min.	Max.	Unit
V_{CC}, V_{BUS}	Supply Voltage		-0.5	6.0	V
V_{CNTRL}	DC Input Voltage (SEL[1:0]) ⁽²⁾		-0.5	V_{CC}	V
V_{SW}	DC Switch I/O Voltage ⁽²⁾	USB	-0.5	6.0	V
		MHL	-0.5	6.0	
		AUDIO	-2.0	3	V
		ID	-0.5	6.0	
I_{IK}	DC Input Diode Current		-50		mA
I_{OUT}	Switch DC Output Current (Continuous)	USB		60	mA
		MHL		60	mA
		AUDIO		60	mA
$I_{OUTPEAK}$	Switch DC Output Peak Current (Pulsed at 1ms Duration, <10% Duty Cycle)	USB		150	mA
		MHL		150	mA
		AUDIO		150	mA
T_{STG}	Storage Temperature		-65	+150	°C
MSL	Moisture Sensitivity Level: JEDEC J-STD-020A			1	
ESD	Human Body Model, JEDEC: JESD22-A114	All Pins		3.5	kV
	IEC 61000-4-2, Level 4, for D+/D- and V_{CC} Pins ⁽³⁾	Contact		8	
	IEC 61000-4-2, Level 4, for D+/D- and V_{CC} Pins ⁽³⁾	Air		15	
	Charged Device Model, JESD22-C101			2	

Notes:

- The input and output negative ratings may be exceeded if the input and output diode current ratings are observed. V_{SW} refers to analog data switch paths (USB, MHL, and audio).
- Testing performed in a system environment using TVS diodes.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Max.	Unit
V _{BUS}	Supply Voltage Running from V _{BUS} Voltage	4.2	5.25	V
V _{CC}	Supply Voltage Running from V _{CC}	2.5	4.5	V
t _{RAMP} (V _{BUS})	Power Supply Slew Rate from V _{BUS}	100	1000	μs/V
t _{RAMP} (V _{CC})	Power Supply Slew Rate from V _{CC}	100	1000	μs/V
Θ _{JA}	Thermal Resistance, Junction to Ambient		283	C°/W
Θ _{JC}	Thermal Resistance, Junction to Case		145	C°/W
V _{CNTRL}	Control Input Voltage (SEL[1:0]) ⁽⁴⁾	0	4.5	V
V _{SW(USB)}	Switch I/O Voltage (USB and ID Switch Path)	-0.5	3.6	V
V _{SW(MHL)}	Switch I/O Voltage (MHL Switch Path)	1.65	3.45	V
V _{SW(AUD)}	Switch I/O Voltage (Audio Switch Path)	-1.5	3.0	V
T _A	Operating Temperature	-40	+85	°C

Note:

4. The control inputs must be held HIGH or LOW; they must not float.

DC Electrical Characteristics

All typical value are at T_A=25°C unless otherwise specified.

Functional Description

Insertion Loss

One of the key factors for using the FSA3230 in mobile digital video applications is the small amount of insertion loss experienced by the received signal as it passes through the switch. This results in minimal degradation of the received eye. One of the ways to measure the quality of the high data rate channels is using balanced ports and four-port differential S-parameter analysis, particularly SDD21.

Bandwidth is measured using the S-parameter SDD21 methodology.

Figure 16. MHL Path SDD21 Insertion Loss Curve

Figure 17. USB Path SDD21 Insertion Loss Curve

Typical Applications

Figure 18 shows the FSA3230 utilizing the V_{BUS} from the micro-USB connection. The 3 MΩ resistors are used

to ensure, for manufacturing test via the micro-USB connector, that the FSA3230 configures for connectivity to the baseband or application processor. Figure 19 shows the configuration for the FSA3230 “self powered” by battery only.

Switch Power Operation

In normal operation, the FSA3230 is powered from the V_{CC} pin, which typically is derived from a regulated power management device. In special circumstances, such as production test or system firmware upgrade, the device can be powered from the V_{BUS} pin. If both V_{CC} and V_{BUS} pins are present, V_{CC} is selected as the power source and V_{BUS} is ignored (see Table 2).

- DRAWING FILENAME: MKT-UMLP16ArevG.
- TERMINAL SHAPE MAY VARY ACCORDING TO PACKAGE SUPPLIER, SEE TERMINAL SHAPE VARIANTS.

ON Semiconductor

ON Semiconductor and  are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
