PDP SPM™

FVP12030IM3LEG1
Energy Recovery

Feature

- Use of high speed 300V IGBTs with parallel FRDs
- Single-grounded power supply by means of built-in HVIC
- Sufficient current driving capability for IGBTs due to adding a buffer
- Isolation rating of 1500Vrms/min.
- Low leakge current due to using an insulated metal substrates

General Description

It is an advanced smart power module(SPM™) that Fairchild has newly developed and designed to provide very compact and optimized performance for the energy recovery circuit of PDP driving system. It combines optimized circuit protection and drive matched to low-loss and high speed IGBTs. Under voltage lock-out protection function enhances the system reliability . The high speed built-in HVIC provides opto-couplerless single power supply IGBT gate driving capability that futher reduce the overall system size of PDP sustaining boards.

Applications

- Energy Recovery Part of a PDP (Plasma Display Panel)
