Fig.1

## ■ Features

### 1. Header Side : 2 Types Available

Two header types are available, low and high profiles. Combined with various contact positions, the FX5 is versatile to work in many application. (See Fig.1 and 2)

### 2. Two-step, Sequential Mating

The mating sequence features a 2-step, "first mate-last break" condition that helps to protect the circuit.

### 3. Mating Guide

A guide rib is provided along with a self-alignment range of  $\pm 1$ mm to allow for easy mating operations.

### 4. SMT Coplanarity

The coplanarity of SMT soldered area has a high accuracy of 0.1mm.

### 5. Miniaturization

The FX5 uses about 30% less mounting area on the board compared with a 1.27mm pitch connector.

◆ Recommended Temperature Profile

HRS test conditions

Test board Glass epoxy 110mm×40mm×1.6mm thick  
 Solder method : Reflow  
 Solder composition : Paste, 96.5%Sn/3%Ag/0.5%Cu  
 Metal mask : 0.15mm thick  
 Reflow cycles : 1 cycles

The temperature profile is based on the above conditions. In individual applications the actual temperature may vary, depending on solder paste type, volume/thickness and board size/thickness. Consult your solder paste and equipment manufacturer for specific recommendations.

## ◆ Cleaning Conditions

### 1. Organic Solvent Cleaning

Solvent	Cold Cleaning	
IPA (Isopropyl alcohol)	Yes	Yes

\*Methylene chloride is not suitable for this product.

### 2. Liquid Cleaning

2. When cleaning with liquid detergents (e.g. terpene, alkali saponifiers), consult the manufacturer's specifications and make sure that the cleaner is suitable for use with the metal and resin components of this connector. Also, do not leave the connector outside where it moisture could infiltrate the product.

### 3. Cautions for Cleaning

3. If any organic solvent or other liquid cleaner or flux remains in the connector, it can cause electrical performance degradation. Please make sure that the connector is completely free of any cleaner or flux before use.

## ◆ Connector Precautions

### 1. Tolerance Clearance on Mating Side

The effective clearance of this product is 1.6mm. Please make sure that your design accounts for 1mm mating clearance between the header and receptacle.

### 2. Header Connector Height

Because the SMT height specification for the header does not account for the thickness of the solder paste, please remember to account for the extra height in the total stacking height.

#### Mating Height: Low profile

#### Mating Height: High profile

### 3. Screw Fastening Torque (SMT Type)

When the screw is fastened, please use the M2 screw. The recommended fastening torque is 0.15(N.m) max.

### 4. Prefixed Process to Board (Through hole Type)

If the prefixed process is required for board mounting, please use the prefixed pin type. (Applicable Thickness  $t = 1.6 \pm 0.1$ )

**Note:**

When the connector is mounted on the board, the dip post is guided into the through-hole first. To prevent dip post damage, make sure that the connector is parallel to the board during this process.

### 5. Plug and Play

Please consult your Hirose representative if you will be mating/unmating the connector while the circuit is energized.

### 6. Others

- Excessive force during mating/unmating will damage the connector.
- Avoid using the mated connectors as a means of holding the PCB together.  
The PCBs need to be secured together with screws, spacers or other means which do not rely on the connectors as the primary support mechanism.
- The resin color of the product may vary slightly with different production lots.  
This does not effect the performance.
