## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## FXL2TD245

## Low Voltage Dual Supply 2－Bit Signal Translator with Configurable Voltage Supplies and Signal Levels and 3－STATE Outputs and Independent Direction Controls

## General Description

The FXL2TD245 is a configurable dual－voltage－supply translator designed for both uni－directional and bi－direc－ tional voltage translation between two logic levels．The device allows translation between voltages as high as 3.6 V to as low as 1.1 V ．The A Port tracks the $\mathrm{V}_{\mathrm{CCA}}$ level，and the B Port tracks the $\mathrm{V}_{\mathrm{CCB}}$ level．This allows for bi－directional voltage translation over a variety of volt－ age levels： $1.2 \mathrm{~V}, 1.5 \mathrm{~V}, 1.8 \mathrm{~V}, 2.5 \mathrm{~V}$ ，and 3.3 V ．

The device remains in 3－STATE until both $\mathrm{V}_{\mathrm{CC}}$ s reach active levels allowing either $\mathrm{V}_{\mathrm{CC}}$ to be powered－up first． Internal power down control circuits place the device in 3－STATE if either $\mathrm{V}_{\mathrm{CC}}$ is removed．

The Transmit／Receive inputs independently determine the direction of data through each of the two bits．The $\overline{\mathrm{OE}}$ input，when HIGH，disables both the A and B Ports by placing them in a 3－STATE condition．The FXL2TD245 is designed so that the control pins（T／ $\bar{R}$ and $\overline{\mathrm{OE}}$ ）are supplied by $\mathrm{V}_{\text {CCA }}$ ．

## Features

■ Bi－directional interface between any 2 levels from 1.1 V to 3.6 V
－Fully configurable：Inputs track $\mathrm{V}_{\mathrm{CC}}$ level
■ Non－preferential power－up sequencing； either $\mathrm{V}_{\mathrm{CC}}$ may be powered－up first
－Outputs remain in 3－STATE until active $\mathrm{V}_{\mathrm{CC}}$ level is reached

■ Outputs switch to 3－STATE if either $\mathrm{V}_{\mathrm{CC}}$ is at GND
－Power－off protection
■ Control inputs（ $\mathrm{T} / \bar{R}_{\mathrm{n}}, \overline{\mathrm{OE}}$ ）levels are referenced to $V_{\text {CCA }}$ voltage
■ Packaged in the Chipscale MicroPak10
（ $1.6 \mathrm{~mm} \times 2.1 \mathrm{~mm}$ ）
■ ESD protections exceeds：
－4kV HBM ESD
（per JESD22－A114 \＆Mil Std 883e 3015．7）
－8kV HBM I／O to GND ESD
（per JESD22－A114 \＆Mil Std 883e 3015．7）
－1kV CDM ESD（per ESD STM 5．3）
－200V MM ESD（per JESD22－A115 \＆ESD STM5．2）

## Power-Up/Power-Down Sequencing

FXL translators offer an advantage in that either $\mathrm{V}_{\mathrm{CC}}$ may be powered up first. This benefit derives from the chip design. When either $\mathrm{V}_{\mathrm{CC}}$ is at 0 volts, outputs are in a HIGH-Impedance state. The control inputs $\left(T / \bar{R}_{n}\right.$ and $\overline{\mathrm{OE}})$ are designed to track the $\mathrm{V}_{\mathrm{CCA}}$ supply. A pull-up resistor tying $\overline{O E}$ to $\mathrm{V}_{C C A}$ should be used to ensure that bus contention, excessive currents, or oscillations do not occur during power-up/power-down. The size of the pullup resistor is based upon the current-sinking capability of the $\overline{\mathrm{OE}}$ driver.

The recommended power-up sequence is the following:

1. Apply power to either $\mathrm{V}_{\mathrm{Cc}}$.
2. Apply power to the $T / \bar{R}_{n}$ inputs (Logic HIGH for A-to-B operation; Logic LOW for B-to-A operation) and to the respective data inputs (A Port or B Port). This may occur at the same time as Step 1.
3. Apply power to other $\mathrm{V}_{\mathrm{Cc}}$.
4. Drive the $\overline{\mathrm{OE}}$ input LOW to enable the device.

The recommended power-down sequence is the following:

1. Drive $\overline{\mathrm{OE}}$ input HIGH to disable the device.
2. Remove power from either $\mathrm{V}_{\mathrm{CC}}$.
3. Remove power from other $\mathrm{V}_{\mathrm{CC}}$.

## Absolute Maximum Ratings

The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

## DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, or (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

PRODUCT STATUS DEFINITIONS

| Datasheet Identification | Product Status | Definition |
| :--- | :--- | :--- |
| Advance Information | Formative or In Design | This datasheet contains the design specifications for <br> product development. Specifications may change in <br> any manner without notice. |
| Preliminary | First Production | This datasheet contains preliminary data, and <br> supplementary data will be published at a later date. <br> Fairchild Semiconductor reserves the right to make <br> changes at any time without notice to improve <br> design. |
| No Identification Needed | Full Production | This datasheet contains final specifications. Fairchild <br> Semiconductor reserves the right to make changes at <br> any time without notice to improve design. |
| Obsolete | Not In Production | This datasheet contains specifications on a product <br> that has been discontinued by Fairchild semiconductor. <br> The datasheet is printed for reference information only. |

#### Abstract

ON Semiconductor and ON are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
