Chipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Contact us

Vision - tailored for pick & place

Precise

Increased Yield

Stable inspections under challenging environmental conditions. Increase productivity and don't care about:
- differences of the work piece
- dust and dirt
- changing ambient environment
Easy

Reduce the cost of operation

Omron FZM1 does not require troublesome configuration and calculation for positioning. Interactive menus and automatic calculations enable an easy setup for the connection to motion devices.

Fast
Increased Throughput

High speed image acquisition and processing optimized for positioning tasks is supported by FZM1. This enables non-stop, undelayed positioning, which means Vision is not limiting anymore, the overall production speed.

The Omron Vision Sensor FZM1 is optimized to detect in high speed and high accuracy the position and orientation of any object inside a machine. This helps to increase the production efficiency.

New generation image processing technologies and an intuitive user interface optimized for positioning applications. High speed communication via EtherCAT or UDP enables an easy interworking with motion components from Omron and other vendors. This increases the overall performance from positioning through control.

EtherCAT is a registered trademark of Beckhoff Automation GmbH (Germany).

Stable Measurements Under Changing Conditions

More-robust operation means less stopping for detection mistakes and increased yield. This more than meets on-site needs and increases system performance.
Resists Light Interference

Resists Fluctuations

[Detecting Alignment Marks with Light Interference]

Previously
Position incorrectly detected.

FZM1
Position detected accurately.

Highest Detection Performance in the Industry

Optimized processing items for positioning have been included to handle a wide range of measurement objects. Just select the right processing item for the target object to enable stable inspection without complicated calculations and settings.

Positioning with Alignment Marks

The alignment marks commonly used in manufacturing of LCD panels and PCBs can be precisely detected. Accurate detection is possible even if the marks are dirty or partially hidden.
EC Cross	EC Circle
Dirty	Overlapping

### Positioning with Corner Detection

Positioning can be performed by detecting a corner of the measurement object. Now, stable detection is possible even for rounded corners or when the edge is broken. This is ideal for glass plates, LCDs and other objects on which alignment marks cannot be printed.

EC Corner	

Rounded or Broken Corner

Positioning by Shape of object

When picking electronic components or food items, unclear printing and dirt can make stable inspections impossible. FZM1 can identify the position and orientation of objects from their shapes. The use of ECM search processing enables precise position and attitude measurements without being affected by surface conditions.

ECM Search
Printing Mistake   Dirt

Superior Performance Under Severe Conditions

EC: Edge Code
Image Processing Technique

patent number 11-550303

Conventional search processing and pattern matching detect objects based on density differences or feature points registered on model images. This produced unstable detection when the measurement object was changed or the shape was not consistent. With EC image processing, the measurement object is recognized as a geometric shape to minimize offsets in the detection position caused by light interference or dirt. This achieves stable, accurate position detection.

Conventional Search Processing

Model

Measurement object (correlation: 70)   Different pattern (correlation: 80)   NG
The shape is imperfect, producing a low correlation. Dirt of the same size and color within the measurement region is incorrectly detected.

EC Image Processing

OK

Changes in brightness are recognized as an edge code and geometric calculations determine the center of the circle and circumference edge. Even if the circle is broken, it is recognized as a circle, i.e., as the measurement object. Dirt and other abnormalities in the measurement region are differentiated so that they are not falsely detected.

Get Relief from the Difficulties of Positioning

Next-generation High-speed Communications with EtherCAT

Support for the EtherCAT open network enables realtime remote I/O control. Connect to OMRON PLCs or other EtherCAT components through EtherCAT communications to perform high-speed motion control.

Less Wiring with Ethernet Cables

All trigger inputs and result outputs are performed using only an Ethernet cable. This eliminates wasted wiring work and helps prevent wiring mistakes when launching the system. With EtherCAT you can wire up to 100 m without a repeater to easily connect to Vision Sensors and Servo Drives.

From — Complex Wiring

To — Wiring with One Cable

100m

EtherCAT
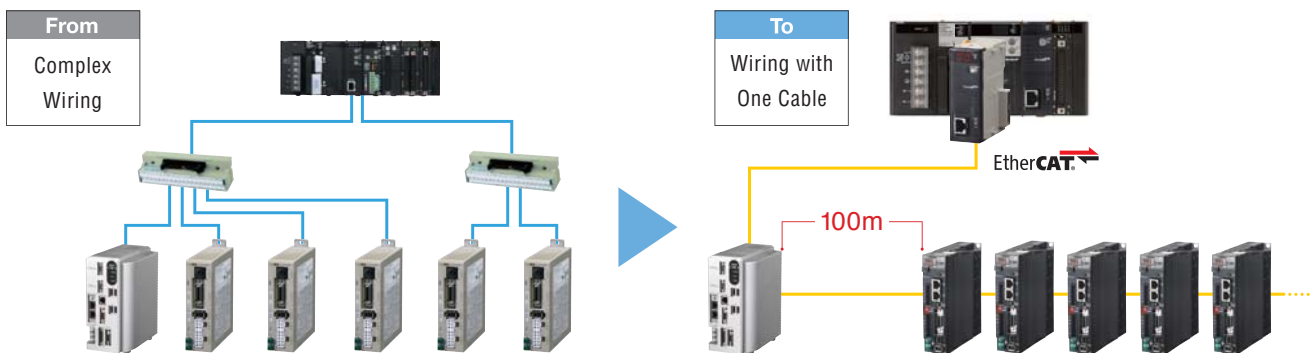

Reduced Ladder Programming

The PLC Link function communicates using three link areas: the command area, response area, and data output area.The PLC can control communications with the sensor simply by reading and writing words allocated in the I/O memory in the PLC. This greatly reduces the amount of ladder programming required for communications.

Easily set up reading and writing I/O memory with special menu commands.

EtherCAT

What is EtherCAT?

EtherCAT is an open network based on Ethernet that enables realtime control. It is ideal for machine-control networks that include motion control. EtherCAT provides the operating principles and architecture required to achieve ultra-high-speed sync control and a bus topology that provides wiring efficiency. It solves the traditional complex wiring problems of Ethernet, which required many hubs and switches. OMRON applies EtherCAT to the high-speed, high-precision machine control networks required in FA sites, and will be releasing more EtherCAT products in the future.

Camera Adjustments — **Focus and Aperture Adjustments**

Focus and brightness, which use to be adjusted based on experience and instinct, have been expressed numerically and displayed in graphs so that you can literally see them. The ideal focus and aperture can be adjusted quickly by essentially anyone. Variations between different operators are eliminated and greater inspection precision can be achieved.
Out of Focus

Ideal Focus

Coordinate Conversions — **Simple Auto Calibration**

The Vision Sensor provides a coordinate conversion function for different stages and robots. Coordinates can be converted for the Vision Sensor and output device without troublesome calculations.

Handles Various Stages and Robots

Robot control	X Y , X Y θ
Stage control	X Y θ , θ X Y , U V W , U V W R

Flexible Camera Mounting

There are no Camera mounting restrictions even with alignment systems that use two Cameras. Differences between Camera angles and fields of vision can be calculated and coordinates converted without performing complex calculations in a PLC or other external device.

Use Different Fields of Vision
Mount at Any Angle
Easy Setup and configuration by an Application Wizard

Calibration between the Cameras and stage or robot can be easily set up using a wizard. Simply select the type of inspection to easily generate the calibration parameters. Automatically input sampling data from an external device via EtherCAT or UDP to eliminate mistakes that can occur in manual input. Fine-tuning can also be quickly and accurately performed for production changes or adjustments of the setup is required on-site.

STEP 1 **Communications Setup**

STEP 2 **Camera Setup**

STEP 3 **External Device Setup**

STEP 4 **Sampling**

STEP 5 **Calibration Parameter Creation**
Automatically input these with communications.

Faster Image acquisition and Processing
A Lineup of High-speed Cameras

The speed of capturing images by a 0.3-megapixel Camera has been greatly increased.Even with a 2-megapixel Camera, the image capturing speed is equivalent to that of a standard 0.3-megapixel Camera.The difference is most obvious in applications requiring a wide field of vision, high precision, and high speed.

NEW
High-speed Camera
0.3 Megapixels

Camera
2 Megapixels

|	
Standard 0.3-megapixel Camera	33.3ms
OMRON 0.3-megapixel Camera	12.5ms
High-speed Camera	**4.9ms**

0.3 Megapixels
640×480

2 Megapixels
1,600×1,200

Seven times the field of vision is captured in 33.3 ms, the same time as for a 0.3-megapixel Camera
ECM Searches at 20 Times the Speed

The FZM1 provides an advanced version of OMRON's unique high-speed search processing, ECM. High-speed search processing is now possible for multiple measurement objects that are conveyed in different orientations. This enables high speed pick-and-place processing for moving objects.

[Search Speed for Rotated Objects]

Rotated

Detection speed **20** times faster*
16 ms

Conventional processing   346ms

New ECM Search   **16ms**

This Much Faster
*Individual workpieces under OMRON test conditions.

Target Applications

FPD

LCD Glass Plate Alignment
Yield was decreased because alignment marks could not be detected due to dirt and defects. Also, it was necessary to use a PLC to calculate the movement amounts of the stage from the measurement results from two Cameras, and the ladder program design and adjustment processes required excessive time.

Alignment mark detection using the EC algorithm suppressed the effects of dirt and defects to enable stable detection. Calibration between the Cameras and stage could be achieved without complex settings or calculations, greatly reducing setup work.

Food and Packaging

Pick and Place for Shiny Packages

Reflections from the shiny packages made measurements unstable can caused frequent mistakes. To increase stability, precise parameter settings were required, increasing setup work. The increased number of parameters increased the processing time, which reduced throughput.
The new ECM Search, which resists light interference, greatly reduced the time required to set up lighting and adjust the parameters, creating stable, high-speed inspections. System throughput was increased.

Electronic Components

High-speed Palletizing
The robot was kept waiting because of the long time required from image input to positioning output. This made it impossible to increase system throughput.

Using a high-speed Camera and faster image processing achieved high-speed processing. By further combining an OMRON Servo Drive and Position Control Unit that support EtherCAT communications, the time from inputting the image to starting the servo was greatly minimized.

Ambient atmosphere	No corrosive gases
Material	Cable sheath: heat-resistant PVC Connector: PVC
Minimum bending radius	75 mm
Weight	approx. 170g

Parallel Cable

Model	FZ-VP	FZ-VPX
Vibration resistiveness	10 to 150 Hz single amplitude 0.15 mm 3 directions, 8 strokes, 4 times	
Ambient temperature range	Operation: 0 to 50 °C Storage: -20 to 65 °C (with no icing or condensation)	
Ambient humidity range	Operation and storage: 35% to 85% (with no condensation)	
Ambient atmosphere	No corrosive gases	
Material	Cable sheath: heat-resistant PVC Connector: resin	
Minimum bending radius	75 mm	
Weight	approx. 160g	approx. 180g

Axes: Camera distance (mm) vs Field of vision (mm)
300,000-pixel Small digital cameras FZ-SF□, FZ-SP□

Chart legend: FZ-LES30, FZ-LES16, FZ-LES6, FZ-LES3

Vertical axis: WD (See Note.1) (mm), range 10 to 10000
Horizontal axis: Field of vision (mm), range 1 to 1000

Note: The vertical axis represents WD, not installation distance.

## Intelligent camera, autofocus camera

with wide field of vision
FZ-S□C100

Vertical axis: Camera distance (mm), values 0, 77.5 (70), 197.5 (190)
Horizontal axis: Field of vision (mm), values 0, 12.6, 29, 52, 100

Note: The value in parentheses is for the camera installation distance when using an Intelligent Camera.

with narrow field of vision
FZ-S□C15

Vertical axis: Camera distance (mm), values 0, 47.5 (35), 67.5 (55)
Horizontal axis: Field of vision (mm), values 0, 2.9, 3.1, 13.8, 14.9

Note: 1. The value in parentheses is for the camera installation distance when using an Intelligent Camera.
2. Be sure to check the Instruction Sheet packed with the product before using an Intelligent Camera or Autofocus Camera.

•Meaning of Optical Chart

The X axis of the optical chart shows the field of vision (mm) (Note1), and the Y axis of the optical chart shows the camera installation distance (mm) (Note2).

Diagram labels: Camera; Extension Tube thickness: t (mm); Lens; Camera distance (mm); WD (mm); Field of vision (mm)

Diagram: Y — Field of vision — X

Note: 1. The lengths of the fields of vision given in the optical charts are the lengths of the Y axis.
2. The vertical axis represents WD for small cameras.
Read and Understand this Catalog

Please read and understand this catalog before purchasing the product. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWL-EDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFI-CATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of the product in the customer's application or use of the product.

Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.

Know and observe all prohibitions of use applicable to this product.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSUR-ING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons. Consult with your OMRON representative at any time to confirm actual specifications of purchased product.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application require-ments. Actual performance is subject to the OMRON Warranty and Limitations of Liability.
