

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

TSYS02D Digital Temperature Sensor

- High Accuracy Temperature Sensor
- 16 bit Resolution
- High Speed, low Response Time
- Low Power Consumption
- I²C Interface
- Small TDFN8 Package

DESCRIPTION

The TSYS02D is a single chip, temperature sensor.

It provides factory calibrated data corresponding to the measured temperature.

The data is provided via **I²C interface**.

The temperature range is -40°C ... +125°C while the resolution is 0.01°C.

The TSYS02D can be interfaced to any microcontroller by an I²C interface.

The TDFN8 package provides smallest size and very fast time response.

FEATURES

High Accuracy $\pm 0.2^\circ\text{C}$ @ Temp.: -5°C ... $+50^\circ\text{C}$
 Adjustment of high accuracy temperature range on request
 Low Supply Current $< 420\mu\text{A}$ (standby $< 0.14\mu\text{A}$)
 I²C Interface up to 400kHz
 Small IC-Package TDFN8 2.5mm x 2.5mm
 Operating Temperature Range: -40°C ... $+125^\circ\text{C}$

APPLICATIONS

Industrial Control
 Replacement of Precision RTDs,
 Thermistors and NTCs
 Heating / Cooling Systems
 HVAC

ABSOLUTE MAXIMUM RATINGS

Absolute maximum ratings are limiting values of permitted operation and should never be exceeded under the worst possible conditions either initially or consequently. If exceeded by even the smallest amount, instantaneous catastrophic failure can occur. And even if the device continues to operate satisfactorily, its life may be considerably shortened.

INTERFACE DESCRIPTION

I²C INTERFACE

An I²C communication message starts with a start condition and it is ended by a stop condition. Each command consists of two bytes: the address byte and command byte.

I²C ADDRESS

The I²C address is 0b1000000x.

COMMANDS

There are four commands:

- Reset
- Read PROM (serial number)
- Read ADC16 Temperature Data (with SCL hold)
- Read ADC16 Temperature Data (without SCL hold)

Command	Hex Value
Reset	0x7E
Read ADC16 Temperature Data (with SCL hold)	0x E3
Read ADC16 Temperature Data (without SCL hold)	0x F3
Read first 8 bytes of Serial Number	0x FA0F
Read last 6 bytes of Serial Number	0x FCC9

TSYS02D Digital Temperature Sensor

RESET SEQUENCE

The reset of TSYS02D can be sent at any time. When SDA line is blocked by an undefined state the only way to get the TSYS02D to work is to send a power on reset or several SCL cycles. This is not needed when the last command was not a conversion.

From Master SCL Slave Poll S = Start Condition W = Write A = Acknowledge
 From Slave P = Stop Condition R = Read N = Not Acknowledge

CONVERSION AND ADC READ

A conversion can be started by sending this command to TSYS02D. When the command is sent to the sensor it stays busy until conversion is done. All other commands except the reset command will not be executed during this time. When conversion is finished the data can be accessed by sending a Read command. If an acknowledge appears from the TSYS02D, you may then send 24 SCLK cycles to get all result bits. Every 9th bit the system waits for acknowledge. If the acknowledge is not sent the data clocking out of the chip stops. Two types of conversion commands for temperature reading are possible. If the "hold" command is issued, the SCL is held low during conversion, indicating when the conversion is finished. If the "no hold" is issued, the SCL line is not controlled by the TSYS02D.

WITH HOLD

From Master SCL Slave Poll S = Start Condition W = Write A = Acknowledge
 From Slave P = Stop Condition R = Read N = Not Acknowledge

WITHOUT HOLD

From Master SCL Slave Poll S = Start Condition W = Write A = Acknowledge
 From Slave P = Stop Condition R = Read N = Not Acknowledge

Poll if the conversion is finished by sending the address and check for acknowledge

From Master SCL Slave Poll S = Start Condition W = Write A = Acknowledge
 From Slave P = Stop Condition R = Read N = Not Acknowledge

TEMPERATURE CALCULATION

TEMPERATURE POLYNOMIAL

ADC16: ADC Result 16 bits

$$T / ^\circ C = ADC16 / 2^{16} \times 175.72 - 46.85$$

EXAMPLE

ADC16: 36636

$$T / ^\circ C = 36636 / 2^{16} \times 175.72 - 46.85$$

T / °C = 51.38°C

ORDER INFORMATION

The TSYS02 temperature sensor family comprises currently three different solutions. Further customer specific adaptations are available on request. Please refer to the table below for part name, description and order information.

Part Name	Description	Order Number
TSYS02D	Digital Temperature Sensor, TDFN8, I2C Interface	G-NIMO-003
TSYS02P	Digital Temperature Sensor, TDFN8, PWM Interface	G-NIMO-004
TSYS02S	Digital Temperature Sensor, TDFN8, SDM Interface	G-NIMO-005

EMC

Due to the use of these modules for OEM application no CE declaration is done. Especially line coupled disturbances like surge, burst, HF etc. cannot be removed by the module due to the small board area and low price feature. There is no protection circuit against reverse polarity or over voltage implemented. The module will be designed using capacitors for blocking and ground plane areas in order to prevent wireless coupled disturbances as good as possible.

DEFINITIONS AND DISCLAIMERS

- Application information – Applications that are described herein for any of these products are for illustrative purpose only. MEAS Deutschland GmbH makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.
- Life support applications – These products are not designed for use in life support appliances, devices, or systems where malfunctions of these products can reasonably be expected to result in personal injury. MEAS Deutschland GmbH customers using or selling this product for use in such applications do so at their own risk and agree to fully indemnify MEAS Deutschland GmbH for any damages resulting from such improper use or sale.
