

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

G6K-2F-RF-V

Surface-mounting High-frequency Relay

8-GHz Band Miniature DPDT High Frequency Relay for High-speed Differential Transmission Signal Switching

- High-frequency characteristics (insertion loss 3 dB or less at 8 GHz)
- Miniaturized to $11.7 \times 7.9 \times 7.1$ mm (L × W × H).
- Rated power consumption of 100 mW with high sensitivity

RoHS Compliant

■Model Number Legend

 $\frac{G6K-2F-RF-V}{12}$

1. Number of poles/ Contact Form

2: 2-pole/ DPDT (2c)

2. Terminal Shape

F: Outside-L surface mounting terminals

3. Special Function 1

RF: High-frequency compatible

4. Special Function 2

V: 8-GHz band

High-speed differential transmission compatible type Application Examples

- Semiconductor test equipment
- Test&measurement equipment
- Communication equipment

■Standard type specifications

Contact type: Bifurcated crossbar

Ag (Surface Au alloy)

 $Note. \ We have a \ line up \ of \ G6K \ (U)-2F(P)-RF(-S,-T) \ products \ for \ 1-GHz/3-GHz \ band \ high-frequency \ signal \ applications.$

■Ordering Information

Relay Function	Enclosure rating	Contact form	Model	Rated coil voltage	Minimum packing unit
Single-side stable	Fully sealed	DPDT (2c)	G6K-2F-RF-V	3, 4.5, 5, 12 VDC	40 pcs/tube

Note 1. When ordering, add the rated coil voltage to the model number.

Example: G6K-2F-RF-V DC5

Rated coil voltage

However, the notation of the coil voltage on the product case as well as on the packing will be marked as \square VDC.

■Ratings

■Dimensions (Unit: mm)

G6K-2F-RF-V Mounting Dimensions (Top View) **Terminal Arrangement/** Tolerance: ±0.1 mm Internal Connections TOP VIEW 11.7±0.2 7.9±0.2 Orientation mark 10.16 6 5 8.89 - 7.62 [0.15 - 6.35 (0.76)**-** 5.08 -(1.68)-3.81-(5.08) -3.81 2 3 - 8.3±0.2 -5.08 6.35 7 62 Note. Check carefully the coil 8 89 polarity of the Relay. 10.16

Note 1. Each value has a tolerance of ± 0.3 mm.

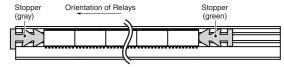

Note 2. The coplanarity of the terminals is 0.15 mm max.

Note 3. The dimensions of the printed circuit board work drawing are a recommended example that take soldering into consideration. Frequency characteristics vary depending on the band dimensions, so check the effect on high-frequency characteristics using a test board before use.

■Package specifications

Tube Packing

G6K-2F-RF-V in tube packing are arranged so that the orientation mark of each Relay in on the left side. Be sure not to make mistakes in Relay orientation when mounting the Relay to the PCB.

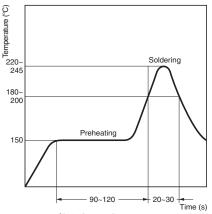

Tube length: 520 mm (stopper not included) No. of Relays per tube: 40 pcs

■G6K-2F-RF-V Recommended Soldering Method

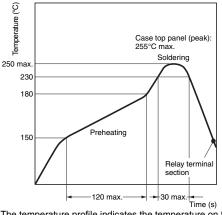

● Recommended Conditions for IRS Method (Surface-mounting Terminals)

(1) IRS Method (Mounting Solder: Lead)

(The temperature profile indicates the temperature on the circuit board surface.)

(2) IRS Method (Mounting Solder: Lead-free)

(The temperature profile indicates the temperature on the PCB.)

- The thickness of cream solder to be applied should be between 200 and 250 μm and the land pattern should be based on OMRON's recommended PCB pattern.
- To maintain the correct soldering joint shown in the following diagram, we recommend applying solder with the soldering conditions shown on the left.

Correct Soldering Incorrect Soldering Relay

Check the soldering in the actual mounting conditions before use.

Solder

6K-2F-RF-V

■Safety Precautions

● For general precautions on PCB Relays, refer to the precautions provided in General Information of the Relay Product Data Book.

Correct Use

Relay Handling

- Use the Relay as soon as possible after opening the moistureproof package. (As a guideline, use the Relay within one week at 30°C or less and 60% RH or less.) If the Relay is left for a long time after opening the moisture-proof package, the appearance may suffer and seal failure may occur after the solder mounting process. To store the Relay after opening the moisture-proof package, place it into the original package and seal the package with adhesive tape.
- When washing the product after soldering the Relay to a PCB, use a water-based solvent or alcohol-based solvent and keep the solvent temperature to less than 40°C. Do not put the Relay in a cold cleaning bath immediately after soldering.

Environmental Conditions for Usage, Storage, and Transport

 Avoid direct sunlight when using, storing, or transporting the Relay and maintain normal temperature, humidity, and pressure conditions.

●Long-term, Continuous ON Contacts

Using the Relay in a circuit where the Relay will be ON continuously
for long periods (rather than switching) can lead to unstable contacts
because the heat generated by the coil itself will affect the insulation
and can cause a film to develop on the contact surfaces. We
recommend using a latching relay (magnetic-holding relay) in this
kind of circuit. If a single-side stable model must be used in this kind
of circuit, we recommend adding fail-safe circuits in case the contact
fails or the coil burns out.

●Claw Securing Force During Automatic Mounting

 During automatic insertion of Relays, be sure to set the securing force of each claw to the following so that the Relay's characteristics will be maintained.

Direction A: 1.96 N max. Direction B: 4.90 N max. Direction C: 1.96 N max.

●Coating

 Do not use silicone coating to coat the Relay when it is mounted to the PCB. Do not wash the PCB after the Relay is mounted using detergent containing silicone. Otherwise, the detergent may remain on the surface of the Relay.

Repeatability

 Contact your OMRON representative if the Relay will be used in an application that requires high repeatability in highfrequency characteristics and contact resistance.

Application examples provided in this document are for reference only. In actual applications, confirm equipment functions and safety before using the product.
 Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperly. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.
