

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

- General precautions P.1501

High-speed sampling and high resolution. The new choice for even more variegated data collection and processing.

They perform with a $\pm 0.3\%$ F.S. linearity for stainless steel and iron

Because they perform with a $\pm 0.3\%$ F.S. linearity, they can be used for sensing stainless steel and iron enabling precise measurements not affected by the work's material. Specifications corresponding to each material (stainless steel, iron, aluminum) has already been inputted in the controller enabling the easy selection of the setting that is most suitable for the particular material used.

Optimal correction of the output feature

We've realized a 25 μ s (40,000 times/sec.) ultra high sampling speed

With a 25 μ s ultra high sampling speed, the GP-X series won't miss even high speed work displacements.

They possess a 0.02 % F.S. resolution for highly accurate measurement

With high resolution, 0.02 % F.S. (Note), they can perform high-accuracy measurements of micro-displacements. In particular, the sensor head GP-X3SE for 0.8 mm 0.049 in sensing can differentiate ultra micro displacement of 0.32 μ m 0.013 mil (Average number of samples: 64).
 Note: GP-XC3SE and GP-XC5SE
 Resolution: 0.04 % F.S.

These devices boast a 0.07 % F.S./ $^{\circ}$ C temperature characteristics

By combining the sensor head with the controller, we've realized 0.07 % F.S./ $^{\circ}$ C. They are highly resistant to ambient temperature changes enabling stable micro-displacement measurements.

APPLICATIONS

Stroke end sensing

Eccentricity sensing

Height sensing

ENVIRONMENTAL RESISTANCE / VARIETY

IP67G sensor head variation

6 types of sensor heads from the ultra compact $\varnothing 3.8$ mm $\varnothing 0.150$ in cylindrical type to the long range sensing type $\varnothing 22$ mm $\varnothing 0.866$ in are available. All sensor heads are oil-proof as per IP67G enabling safe, stable performance even under harsh environments.

MOUNTING / MAINTENANCE

Sensor heads with superior workability and maintainability

Replacement of sensor heads possible

As a result of damage or other mishap rendering maintenance necessary, you can replace the sensor head with new one leaving the controller as it is.

One-touch connector hook up

The sensor head and the controller connection is a simple one-touch connector type.

Sensor head extensions possible

Between the sensor head and the controller, a **GP-XCCJ7** extension cable (optional) can be used up to a 10 m **32.808 ft** total length.

FUNCTIONS

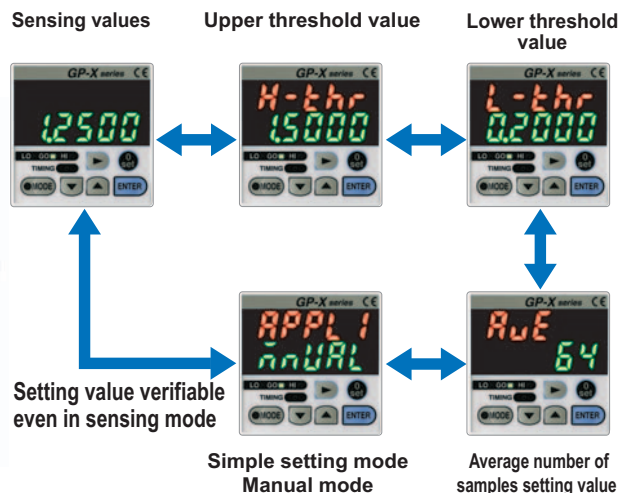

The 5-digit, dual, 2-color digital display offers great visibility

If the measurement results fall within the setting range (GO), they will appear on the lower digital display in green. If they are out of range (HI, LO), they will be displayed in the upper digital display in orange. The display position and color change allows for accurate visibility even for momentary changes.

Digital input display enabling easy setting

Its dual digital display enables numerical setting while verifying setting items for each mode. Even when sensing, it enables the verification of the main settings.

The RS-232C communication connector is standard equipment

It is capable of various controls such as saving measurement data to PC and the controller's inputted settings and loading stored memory.

Enables sensors data comparisons and calculations

3-value judgment output for calculating measurement data conformity and calculation results between 2 interconnected controllers is rendered possible. The calculation function equipment renders digital panel controllers unnecessary.

GP-X
GP-A

OPTIONS

Datalink between sensors possible

The controller communication unit **GP-XCOM** (optional) can be linked to up to 8 controllers and load via just one RS-232C cable each controller settings and measurement data to a PC.

An intelligent monitor (GP-XAiM) optimal for collecting and analyzing measurement data is also available

An intelligent monitor capable of the settings for each measurement conditions and waveform display monitoring. It can perform waveform monitoring, which could until now only be done by the oscilloscope, as well as the simple loading and saving onto a PC of settings for each condition and function. (Exclusive RC-232C cable is attached.)

BCD output unit GP-XBCD (Optional)

20 kHz high-speed data output

The measurement data can be processed quickly in the PLC. (Sampling rate: 20 kHz)

4 types of measurement modes available

Measurement modes compatible to the most widely used applications are available. Because of this, inputting setting values can be done with ease. Please select the most appropriate mode to suit your specific application.

Mutual interference prevention function

The sensor head can be made interference prevention by linking up to 8 controllers via an interference prevention output cable and shifting the oscillation timing. This enables precise measurements to be obtained even in cases where many sensor heads are crowded in the same area.

Removable type terminal block

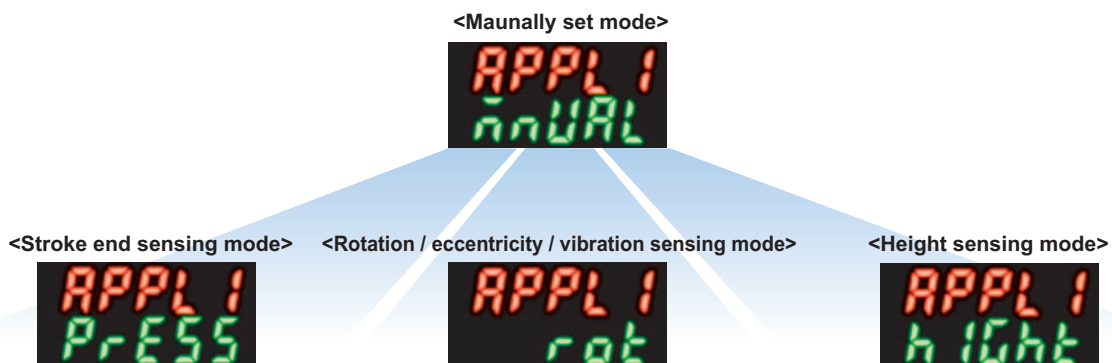

It is equipped with a removable type European terminal block very convenient during assembly, when dividing the equipment into segments or when performing maintenance. It also features an reverse insertion prevention construction.

European terminal block

4 types of selectable memory functions

The setting data can be processed in 4 types of memory when measuring. This function enables either the changing of the workpiece, the sensing of multiple products or sensing after product changeover to be done smoothly.

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C **+68 °F**.

2) The sensing range is specified for the standard sensing object.

3) This value represents 20 to 60 % of the maximum sensing distance when combining the sensor head and the controller.

4) For the flexible cable type, please contact our office.

5) The given weight of the threaded type sensor head is the value including the weight of the nuts and the toothed lock washer.

BCD output unit

Item	Model No.	GP-XBCD
Current consumption		20 mA or less
Outputs (5 digits BCD, Polarity indication, VALID)		N-channel MOSFET open drain <ul style="list-style-type: none"> • Maximum sink current: 50 mA • Applied voltage: 30 V DC or less (between output and GND) • Residual voltage: 1 V or less (at 50 mA sink current)
Hold input		Non-voltage contact or NPN open-collector transistor input <ul style="list-style-type: none"> • Low: 0 to 1 V • High: Open
Material		Enclosure: ABS
Weight		Net weight: 30 g approx.
Accessory		Mounting bracket [Stainless steel (SUS304)]: 1 pc.

Note: Connects to the control device with **GP-XBCC3** cable with connector on one end for BCD output unit (3 m **9.843 ft** cable length, optional).

Controller communication unit

Item	Model No.	GP-XCOM
Current consumption		5 mA or less
Material		Enclosure: ABS
Weight		Net weight: 20 g approx.
Accessory		Mounting bracket [Stainless steel (SUS304)]: 1 pc.

Note: Each **GP-XCOM** is connected using a link cable for controller communication units (**SL-F□**, optional).

When **GP-XCOM** is used, controllers cannot communicate if their software versions are not compatible (Ver. 1.06 or earlier version with Ver 2.00 or later version).

Check the software version and use the correct combination.

GP-X

GP-A

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

- The sensor head and the controller are adjusted in order to conform to the default specification linearity.
- In the event of replacing sensor heads, input the sensor head's characteristic code and conduct 3-point correction (calibration).
- Should you use an extension cable, turn the sensor head cable length selection switch located on the back of the controller to "3 m + 7 m 9.843 ft + 22.966 ft". Then reintroduce the power supply and conduct 3-point correction (calibration).

Conditions in use for CE conformity

- This product is CE compliant and complies with EMC directives. EN 61000-6-2 is the applicable standard that covers immunities relating to use of this product, but in order to comply with this standard, the following conditions must be satisfied.

Conditions

- The controller should be connected less than 10 m 32.808 ft from the power supply.
- The signal line to connect with the controller should be less than 30 m 98.425 ft.
- A ferrite clamp must be mounted within 10 mm 0.394 in from connector fitted onto the GP-XBCC3 cable with connector on one end for BCD output units.

Linearity in case of disc-shaped or cylindrical objects

- In case the sensing object is disc-shaped or cylindrical, the linearity varies with the sensing object size. In the event the sensing object is larger than the sizes indicated in the table below, the linearity specification (within ±0.3 % F.S.) is satisfied by performing zero-adjustment and span adjustment when in contact using the scaling function.

<In case of disc>

Sensor head	Disc diameter ø (mm in)	Cylinder diameter ø (mm in)
GP-X3SE	6 0.236	16 0.630
GP-X5SE	8 0.315	16 0.630
GP-X8S	12 0.472	50 1.969

<In case of cylinder>

GP-X10M	12 0.472	50 1.969
GP-X12ML	25 0.984	55 2.165
GP-X22KL	30 1.181	165 6.496

Mounting sensor head

- The tightening torque should be under the value given below.

Mounting with set screw

- Make sure to use an M3 or smaller set screw having a cup-point.

Model No.	A (mm in)	Tightening torque
GP-X3SE	4 to 16 0.157 to 0.630	0.10 N·m or less
GP-X5SE	5 to 16 0.197 to 0.630	0.44 N·m or less
GP-X8S		0.58 N·m or less

Mounting with nut

Model No.	B (mm in)	Tightening torque
GP-X10M	7 0.276 or more	9.8 N·m or less
GP-X12ML	14 0.551 or more	20 N·m or less
GP-X22KL	20 0.787 or more (Note 1)	20 N·m or less

Notes: 1) Without nut. If a nut is installed, the dimension will be 23.5 mm 0.926 in or more.
2) Mount such that the nuts do not protrude from the threaded portion.

Distance from surrounding metal

- As metal around the sensor head may affect the sensing performance, pay attention to the following points.

<Embedding of the sensor head in metal>

- Since the analog output may change if the sensor head is completely embedded in metal, keep the minimum distance specified in the table below.

Sensor head	C (mm in)	D (mm in)
GP-X3SE	ø10 ø0.394	3 0.118
GP-X5SE		
GP-X8S		
GP-X10M		
GP-X12ML	ø50 ø1.969	14 0.551
GP-X22KL	ø50 ø1.969	20 0.787

Mutual interference

- If several sensor heads are mounted close together, some specifications may not be satisfied. Therefore, proceed with the interference prevention function enabled. The interference prevention function eliminates interference among sensors by alternating sensor oscillations. Contact our office for details about time charts etc. If not using the interference prevention function, leave a distance more than the values given below.

<Face to face mounting>

Sensor head	E (mm in)	F (mm in)
GP-X3SE	15 0.591	9 0.354
GP-X5SE	30 1.181	11 0.433
GP-X8S	40 1.575	15 0.591
GP-X10M	40 1.575	15 0.591
GP-X12ML	170 6.693	50 1.969
GP-X22KL	200 7.874	200 7.874

<Parallel mounting>

Sensing range

- The sensing range is specified for the standard sensing object [stainless steel (SUS304) / iron [Cold rolled carbon steel (SPCC)], 60 × 60 × t 1 mm 2.362 × 2.362 × t 0.039 in]. For sensing metals other than the standard sensing objects, use the correction coefficient stated below as a guideline. Verify with the actual sensor before using.

Correction coefficient

Sensor head	GP-X3SE	GP-X5SE	GP-X8S
Metal	GP-X10M	GP-X12ML	GP-X22KL
Stainless steel (SUS304), Iron	1		
Aluminum	0.5 approx.		

Others

- After turning on the power, wait 15 min. or more [20 min. for the GP-XC3SE(-P) and GP-XC5SE(-P)] before using the product. The power supply circuit is not stable immediately after the power is turned on, and this may cause measurement values to be distorted. In addition, note that there will also be a muting period of approx. 2 sec.

DIMENSIONS (Unit: mm in)

The CAD data in the dimensions can be downloaded from our website.

Controller

Panel cut-out dimensions

<When BCD output unit / controller communication unit not mounted>

Note: The panel thickness should be 1 to 5 mm 0.039 to 0.197 in.

<When BCD output unit / controller communication unit mounted>

Note: The panel thickness should be 1 to 2.5 mm 0.039 to 0.098 in.
