This Profile temperature is the sensor surface package temperature.

Reflow interval shall be within 7days under conditions, 10 to 30°C, 70%RH or less.

2. Other precautions

An infrared lamp used to heat up for soldering may cause a localized temperature rise in the resin.
 Also avoid immersing the resin part in the soldering.
 Even if within the temperature profile above, there is the possibility that the gold wire in package is broken in case that the deformation of PCB gives the affection to lead pins.
 Please use after confirmation the conditions fully actual solder reflow machine.
