## imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

#### GTLP16612 18-Bit TTL/GTLP Universal Bus Transceiver

#### **General Description**

The GTLP16612 is an 18-bit universal bus transceiver which provides TTL to GTLP signal level translation. The device is designed to provide a high speed interface between cards operating at TTL logic levels and a backplane operation is a direct result of GTLP's reduced output swing (<1V), reduced input threshold levels and output edge rate control which minimizes signal settling times. GTLP is a Fairchild Semiconductor derivative of the Gunning Transceiver Logic (GTL) JEDEC standard JESD8-3.

Fairchild's GTLP has internal edge-rate control and is Process, Voltage, and Temperature (PVT) compensated. Its function is similar to BTL or GTL but with different driver output levels and receiver threshold. GTLP output low voltage is typically less than 0.5V, the output high is 1.5V and the receiver threshold is 1.0V.

#### **Features**

Bidirectional interface between GTLP and TTL logic levels

March 1995

Revised March 2001

- Designed with an edge rate control circuit to reduce output noise on GTLP port
- V<sub>REF</sub> pin provides external supply reference voltage for receiver threshold adjustability
- Special PVT compensation circuitry to provide consistent performance over variations of process, supply voltage and temperature
- TTL compatible Driver and Control inputs
- Designed using Fairchild advanced CMOS technology
  Bushold data inputs on A port to eliminate the need for
- external pull-up resistors for unused inputs
- Power up/down and power off high impedance for live insertion
- 5V tolerant inputs and outputs on LVTTL port
- Open drain on GTLP to support wired-or connection
- Flow-through pinout optimizes PCB layout
- D-type flip-flop, latch and transparent data paths
- A Port outputs source/sink -32 mA/+32 mA

#### **Ordering Code:**

Order Number	Package Number	Package Description
GTLP16612MEA	MS56A	56-Lead Shrink Small Outline Package (SSOP), JEDEC MO-118, 0.300 Wide
GTLP16612MTD	MTD56	56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide
Device also available in	Tape and Reel. Specify by	y appending suffix letter "X" to the ordering code.

#### **Functional Description**

The GTLP16612 combines a universal transceiver function with a TTL to GTLP translation. The A Port and control pins operate at LVTTL or 5V TTL levels while the B Port operates at GTLP levels. The transceiver logic includes D-type latches and D-type flip-flops to allow data flow in transparent, latched and clock mode.

The functional operation is described in the truth table below.

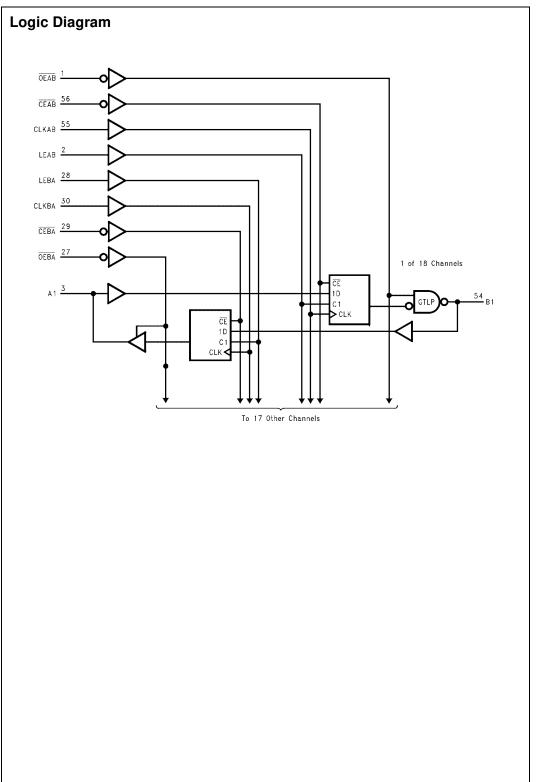

#### **Truth Table**

(Note 1)

	Inputs					Mode
CEAB	OEAB	LEAB	CLKAB	Α	В	
Х	Н	Х	Х	Х	Z	Latched
L	L	L	н	х	B <sub>0</sub> (Note 2)	storage
L	L	L	L	х	B <sub>0</sub> (Note 3)	of A data
х	L	Н	Х	Г	L	Transparent
х	L	Н	Х	Н	Н	
L	L	L	Ŷ	Г	L	Clocked storage
L	L	L	Ŷ	Н	Н	of A data
Н	L	L	Х	Х	B <sub>0</sub> (Note 3)	Clock inhibit

Note 1: A-to-B data flow is shown. B-to-A data flow is similar but uses OEBA, LEBA, CLKBA, and CEBA.

Note 2: Output level before the indicated steady-state input conditions were established, provided that CLKAB was HIGH before LEAB went LOW. Note 3: Output level before the indicated steady-state input conditions were established.

#### Absolute Maximum Ratings(Note 4)

Supply Voltage (V <sub>CC</sub> , V <sub>CCQ</sub> )	-0.5V to +7.0V
DC Input Voltage (VI)	-0.5V to +7.0V
DC Output Voltage (V <sub>O</sub> )	
Outputs 3-STATE	-0.5V to +7.0V
Outputs Active (Note 5)	$-0.5V$ to $V_{CC} + 0.5V$
DC Output Sink Current into	
A Port I <sub>OL</sub>	64 mA
DC Output Source Current from	
A Port I <sub>OH</sub>	–64 mA
DC Output Sink Current	
into B Port in the LOW State, $\mathrm{I}_{\mathrm{OL}}$	80 mA
DC Input Diode Current (IIK)	
V <sub>1</sub> < 0V	–50 mA
DC Output Diode Current (I <sub>OK</sub> )	
V <sub>O</sub> < 0V	–50 mA
$V_{O} > V_{CC}$	+50 mA
Storage Temperature (T <sub>STG</sub> )	$-65^{\circ}C$ to $+150^{\circ}C$
ESD Performance	>2000V

#### Recommended Operating

Conditions (Note 6)

Supply Voltage V <sub>CC</sub>	
V <sub>CC</sub>	3.15V to 3.45V
V <sub>CCQ</sub>	4.75V to 5.25V
Bus Termination Voltage (V <sub>TT</sub> )	1.35V to 1.65V
Input Voltage (V <sub>I</sub> )	
on A Port and Control Pins	0.0V to 5.5V
HIGH Level Output Current (I <sub>OH</sub> )	
A Port	–32 mA
LOW Level Output Current (I <sub>OL</sub> )	
A Port	+32 mA
B Port	+34 mA
Operating Temperature (T <sub>A</sub> )	$-40^{\circ}C$ to $+85^{\circ}C$

Note 4: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristic tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 5:  $\mathrm{I}_\mathrm{O}$  Absolute Maximum Rating must be observed.

Note 6: Unused inputs must be held HIGH or LOW.

#### **DC Electrical Characteristics**

Over Recommended Operating Free-Air Temperature Range,  $V_{\mbox{REF}}$  = 1.0V (Unless Otherwise Noted).
