## NOTES

1. The dust cover should not be removed since doing so may alter the characteristics.
2. Avoid use under severe environmental conditions, such as high humidity, organic gas or in dust, oily locations and locations subjected to extremely frequent shock or vibrations.
3. When mounting, use spring washers. Optimum fastening torque ranges from 49 to $68.6 \mathrm{~N} \cdot \mathrm{~m}$ ( 5 to $7 \mathrm{kgf} \cdot \mathrm{cm}$ ).
4. Firmly insert the receptacles so that there is no slack or looseness. To remove a receptacle, 19.6 to 39.2 N (2 to 4 kg ) of pulling strength is required. Do not remove more than one receptacle at one time. Always remove one receptacle at a time and pull it straight outwards.
5. When using the AC type, the operate time due to the in-rush phase is 20 ms or more. Therefore, it is necessary for you to verify the characteristics for your actual circuit.
6. When using the push-on blocks for the screw terminal type, use crimped terminals and tighten the screw-down terminals to the torque below.
M4.5 screw:
147 to $166.6 \mathrm{~N} \cdot \mathrm{~cm}$ ( 15 to $17 \mathrm{kgf} \cdot \mathrm{cm}$ )
M4 screw:
117.6 to $137 \mathrm{~N} \cdot \mathrm{~cm}$ ( 12 to $14 \mathrm{kgf} \cdot \mathrm{cm}$ )

M3.5 screw:
78.4 to $98 \mathrm{~N} \cdot \mathrm{~cm}$ (8 to $10 \mathrm{kgf} \cdot \mathrm{cm}$ )

## HE RELAY TERMINAL SOCKET

## FEATURES

1. Snap-in mounting to DIN rails is possible.
Can be inserted into 35 mm wide DIN rails. Removal is easy, too.
2. Sure and easy wiring

The use of UP terminals makes wiring exceptionally easy and sure.

## 3. Hold-down clips can be stored in main unit

Because the hold-down clips can be stored in the main unit, there is no need to remove them when, for example, wiring is changed.

## MOUNTING METHOD

1. Relay mounting

2. Installing to a DIN rail

3. Removing from a DIN rail

## NOTES

1. Be careful not to drop the relay. It is made of heat-hardened resin and may break.
2. Be sure to tighten the screw-down terminals firmly. Loose terminals may lead to the generation of heat. 3. When the 1 Form $A$ is used in situations covered by the Japanese Electrical Appliance and Material Control Law, the use of $5.5 \mathrm{~mm}^{2}$ cabling and 30 A current is not allowed. Consequently, the circuit should be less than 20 A .
3. When fixing the terminal socket with screws, to avoid torque damage and distortion, apply torque within the ranges shown below.
M3.5 screws:
0.784 to $0.98 \mathrm{~N} \cdot \mathrm{~m}$ (8 to $10 \mathrm{kgf} \cdot \mathrm{cm}$ )

M4 screws:
