

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

January 1995

## Octal transparent latch with 3-state outputs

HEF40373B MSI

#### **DESCRIPTION**

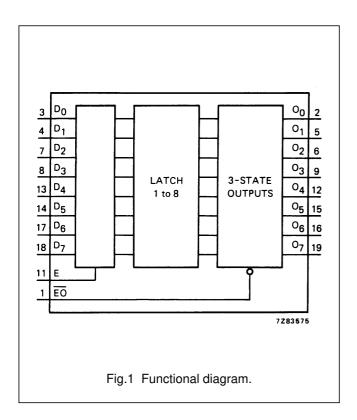

The HEF40373B is an 8-bit transparent latch with 3-state buffered outputs. The output stages have high current output capability suitable for driving highly capacitive loads. The latch outputs follow the data inputs when the latch enable (E) is HIGH. When E is LOW, the data that meets the set-up times is latched. The 3-state outputs are controlled by the output enable input  $\overline{\text{EO}}$ . A HIGH on

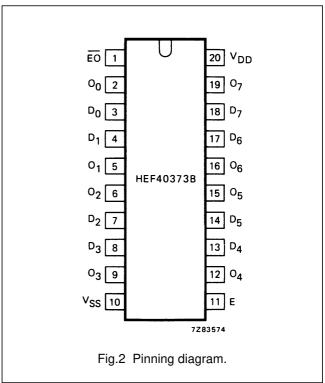

EO causes the outputs to assume a high impedance OFF-state. The device features hysteresis on the E input to improve noise rejection.

Schmitt-trigger action in the E input makes the circuit highly tolerant to slower input rise and fall times.

The HEF40373B is pin and functionally compatible with the TTL '373' device.

Supply voltage range: 3 to 15 V.

HEF40373BP(N): 20-lead DIL; plastic

(SOT146-1)

HEF40373BD(F): 20-lead DIL; ceramic (cerdip)

(SOT152)

HEF40373BT(D): 20-lead SO; plastic

(SOT163-1)

(): Package Designator North America

#### **PINNING**

 $D_0$  to  $D_7$  data inputs

E latch enable input

EO output enable input (active LOW)

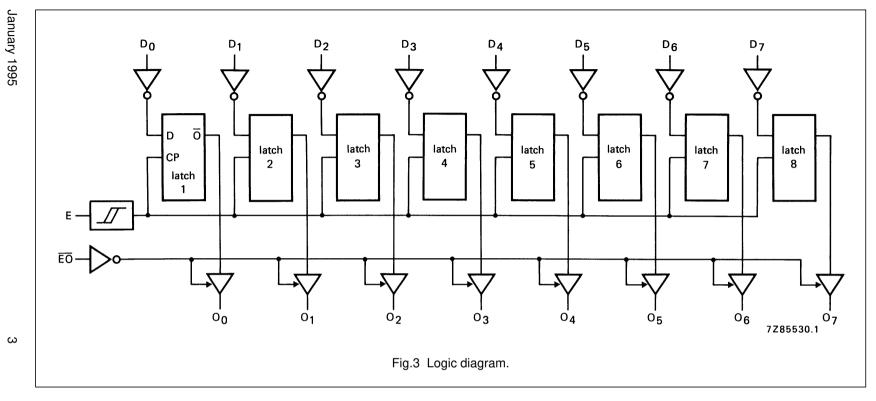

O<sub>0</sub> to O<sub>7</sub> 3-state buffered outputs

#### FAMILY DATA, IDD LIMITS category MSI

See Family Specifications

#### **FUNCTION TABLE**

OPERATING MODES		INPUTS		INTERNAL	OUTPUTS O <sub>0</sub> TO O <sub>7</sub>	
OPERATING MODES	ΕO	E	D <sub>n</sub>	REGISTER		
anable 8 road register	L	Н	L	L	L	
enable & read register	L	Н	Н	Н	н	
latab <sup>9</sup> road register	L	L	1	L	L	
latch & read register	L	L	h	Н	н	
latab vaniatav 9 diaabla autouta	Н	L	1	L	Z	
latch register & disable outputs	Н	L	h	Н	Z	

#### Notes

- 1. H = HIGH state (the more positive voltage)
  - h = HIGH state (one set-up time prior to the HIGH-to-LOW enable transition)
  - L = LOW state (the less positive voltage)
  - I = LOW state (one set-up time prior to the HIGH-to-LOw enable transition)
  - Z = high impedance OFF-state

#### **RATINGS**

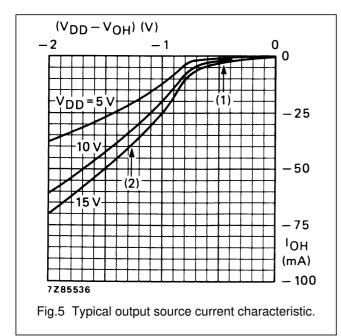

Limiting values in accordance with the Absolute Maximum System (IEC 134) See Family Specifications, except for:

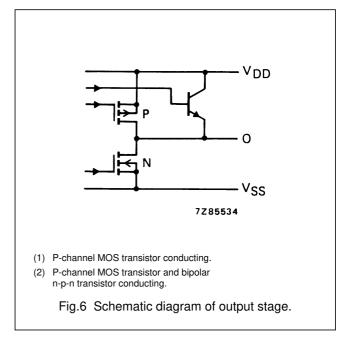

D.C. current into any input	$\pm I_1$	max.	10 mA
D.C. source or sink current into any output	$\pm I_{O}$	max.	25 mA
D.C. current into the supply terminals	±Ι	max.	100 mA

#### **DC CHARACTERISTICS**

 $V_{SS} = 0 V$
