HFBR-1525EZ Transmitter
HFBR-2525EZ Receiver

12 Megabaud Versatile Link Fiber Optic Transmitter and Receiver for 1 mm POF and 200 µm HCS®

Data Sheet

Description

The HFBR-1525EZ transmitter is an LED in a low cost plastic housing designed to efficiently couple power into 200 µm diameter Hard Clad Silica (HCS®) and 1 mm diameter Plastic optical fiber (POF). The HFBR-2525EZ receiver incorporates a PIN detector and digital output IC compatible with CMOS and TTL logic families.

HFBR-1525EZ/HFBR-2525EZ links operate from DC to 12 MBd at distances up to 50 meters with 1 mm POF and up to 500 meters with 200 µm HCS®. No minimum link distances are required when using recommended circuits, simplifying design.

Versatile Link components can be interlocked (N-plexed together) to minimize space and to provide dual connections with the duplex connectors. Up to eight packages can be interlocked and inserted into a printed circuit board.

POF and HCS® are available in pre-connectored lengths or can be easily field-terminated. A single transmitter drive current for POF and HCS® allows both fibers to be used with a single design.

HFBR-2525EZ Receiver

The HFBR-2525EZ receiver consists of a silicon PIN photodiode and digitizing IC to produce a logic compatible output. The IC includes a unique circuit to correct the pulse width distortion (PWD) of the first bit after a long idle period. This enables operation from DC to 12 MBd with low PWD for arbitrary data patterns.

The receiver output is a "push-pull" stage compatible with TTL and CMOS logic. The receiver housing is a dark, conductive plastic, compatible with all Versatile Link connectors.

Notes:

1. Typical data are at +25°C, V_{CC} = 5.0 V.
2. Input power levels are for peak (not average) optical input levels. For 50% duty cycle data, peak optical power is twice the average optical power.
3. Receiver overdrive ($P_{RL,max}$) is specified as the limit where |PWD| will not exceed 30 ns. The receiver will be in the correct state (logic "0") for optical powers above $P_{RL,max}$. However, it may not meet a 30% symbol period PWD if the overdrive limit is exceeded. Refer to Figure 8 for PWD performance at high received optical powers.
4. Typical value measured from junction to PC board solder joint for horizontal mount package, HFBR-2525EZ.
5. Pins 5 and 8 are electrically connected to the conductive housing and are also used for mounting and retaining purposes. It is required that pins 5 and 8 be connected to ground to maintain conductive housing shield effectiveness.
6. In recommended receiver circuit, with an optical signal from the recommended transmitter circuit.
7. Pin 4 is electrically isolated internally. Pin 4 may be externally connected to pin 1 for board layout compatibility with HFBR-25X1Z, HFBR-25X2Z and HFBR-25X4Z. Otherwise it is recommended pin 4 be grounded as in Figure 11.
8. BER ≤ 10E-9, includes a 10.8 dB margin below the receiver switching threshold level (signal to noise ratio = 12).
