

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## GaAs MMIC I/Q MIXER 17 - 27 GHz

### Typical Applications

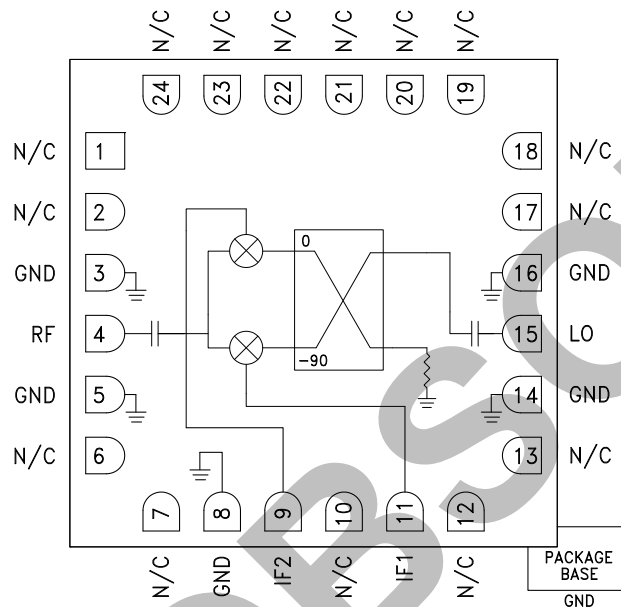

The HMC1041LC4 is Ideal for:

- Point-to-Point Radio
- Point-to-Multi-Point Radio
- Test Equipment & Sensors
- Military End Use

### Features

- Wide IF Bandwidth: DC - 3.5 GHz
- Image Rejection: 36 dB
- LO to RF Isolation 45 dB
- High Input IP3: +20 dBm
- 24 Lead 4x4 mm SMT Package: 16 mm<sup>2</sup>

### Functional Diagram

### General Description

The HMC1041LC4 is a compact I/Q MMIC mixer in a leadless "Pb free" SMT package, which can be used as either an Image Reject Mixer or a Single Sideband Upconverter. The mixer utilizes two standard Hittite double balanced mixer cells and a 90 degree hybrid fabricated in a GaAs MESFET process. A low frequency quadrature hybrid was used to produce a 1000 MHz USB IF output. This product is a much smaller alternative to hybrid style Image Reject Mixers and Single Sideband Upconverter assemblies. The HMC1041LC4 eliminates the need for wire bonding and allows the use of surface mount manufacturing techniques.

### Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 2, 6, 7, 10, 12, 13, 17- 24	N/C	These pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/DC ground externally.	
3, 5, 8, 14, 16	GND	These pins and the exposed ground paddle must be connected to RF/DC ground.	
4	RF	This pin is AC coupled and matched to 50 Ohms.	
9	IF2	This pin is DC coupled. For application not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source/sink more than 3 mA of current or product non-function and possible product failure will result.	
11	IF1		
15	LO	This pin is AC coupled and matched to 50 Ohms from 17 to 27 GHz

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
