

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## FEATURES

**High saturated output power ( $P_{SAT}$ ): 40.5 dBm typical**

**High small signal gain: 18.5 dB typical**

**High power added efficiency (PAE): 69% typical**

**Instantaneous bandwidth: 0.01 GHz to 1.1 GHz**

**Supply voltage:  $V_{DD} = 28\text{ V}$  at 100 mA**

**Internal prematching**

**Simple and compact external tuning for optimal performance**

**32-lead, 5 mm × 5 mm, LFCSP package: 25 mm<sup>2</sup>**

## APPLICATIONS

**Extended battery operation for public mobile radios**

**Power amplifier stage for wireless infrastructures**

**Test and measurement equipment**

**Commercial and military radars**

**General-purpose transmitter amplification**

## GENERAL DESCRIPTION

The **HMC1099** is a gallium nitride (GaN), broadband power amplifier delivering >10 W with up to 69% PAE across an instantaneous bandwidth of 0.01 GHz to 1.1 GHz, and with a  $\pm 0.5$  dB typical gain flatness.

The **HMC1099** is ideal for pulsed or continuous wave (CW) applications, such as wireless infrastructure, radars, public mobile radios, and general-purpose amplification.

The **HMC1099** amplifier is externally tuned using low cost, surface-mount components and is available in a compact LFCSP package.

Multifunction pin names may be referenced by their relevant function only.

Power Gain for $P_{SAT}$			13.5		dB	
Power Added Efficiency	PAE		69		%	
OUTPUT THIRD-ORDER INTERCEPT	IP3		47		dBm	Measurement taken at $P_{OUT}/\text{tone} = 30\text{ dBm}$
NOISE FIGURE			5		dB	
TOTAL SUPPLY CURRENT	$I_{DD}$		100		mA	Adjust the gate bias control voltage ( $V_{GG}$ ) between $-8\text{ V}$ to $0\text{ V}$ to achieve an $I_{DD} = 100\text{ mA}$ typical

### TOTAL SUPPLY CURRENT BY $V_{DD}$

Table 4.

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
SUPPLY CURRENT	$I_{DD}$					Adjust the gate bias control voltage ( $V_{GG}$ ) between $-8\text{ V}$ to $0\text{ V}$ to achieve an $I_{DD} = 100\text{ mA}$ typical
$V_{DD} = 24\text{ V}$			100		mA	
$V_{DD} = 28\text{ V}$			100		mA	

## ABSOLUTE MAXIMUM RATINGS

Table 5.

Parameter <sup>1</sup>	Rating
Drain Bias Voltage ( $V_{DD}$ )	32 V dc
Gate Bias Voltage ( $V_{GG}$ )	-8 V to 0 V dc
Radio Frequency (RF) Input Power (RFIN)	33 dBm
Maximum Forward Gate Current	4 mA
Maximum Voltage Standing Wave Ratio (VSWR) <sup>2</sup>	6:1
Channel Temperature	225°C
Maximum Peak Reflow Temperature (MSL3) <sup>3</sup>	260°C
Continuous Power Dissipation, $P_{DISS}$ ( $T_A = 85^\circ\text{C}$ , Derate 89 mW/°C Above 85°C)	12.5 W
Thermal Resistance (Junction to Back of Paddle)	11.2°C/W
Storage Temperature Range	-55°C to +150°C
Operating Temperature Range	-40°C to +85°C
ESD Sensitivity (Human Body Model)	Class 1B, passed 500 V

<sup>1</sup> When referring to a single function of a multifunction pin in the parameters, only the portion of the pin name that is relevant to the Absolute Maximum Rating is listed. For full pin names of multifunction pins, refer to the Pin Configuration and Function Descriptions section.

<sup>2</sup> Restricted by maximum power dissipation.

<sup>3</sup> See the Ordering Guide for additional information.

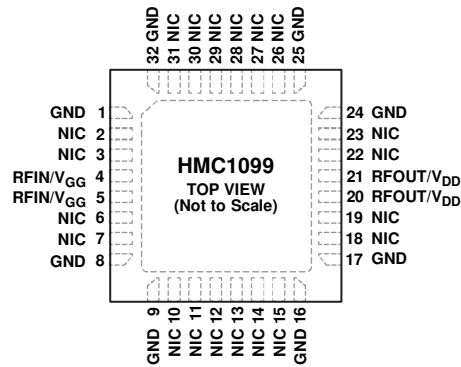

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

# PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

- NOTES
1. EXPOSED PAD. EXPOSED PAD MUST BE CONNECTED TO RF/DC GROUND.
  2. NO INTERNAL CONNECTION. THESE PINS ARE NOT CONNECTED INTERNALLY.

13925-002

Figure 2. Pin Configuration

Table 6. Pad Function Descriptions

Pin No.	Mnemonic	Description
1, 8, 9, 16, 17, 24, 25, 32	GND	Ground. These pins must be connected to RF/dc ground. See Figure 3 for the GND interface schematic.
2, 3, 6, 7, 10 to 15, 18, 19, 22, 23, 26 to 31	NIC	No Internal Connection. These pins are not connected internally. However, all data was measured with these pins connected to RF/dc ground externally.
4, 5	RFIN/V <sub>GG</sub>	RF Input (RFIN)/Gate Bias Control Voltage (V <sub>GG</sub> ). This pin is a multifunction pin. The RFIN/V <sub>GG</sub> pin is dc-coupled with internal prematching and requires external matching to 50 Ω, as shown in Figure 38. See Figure 4 for the RFIN/V <sub>GG</sub> interface schematic.
20, 21	RFOUT/V <sub>DD</sub>	RF Output (RFOUT)/Drain Bias Voltage (V <sub>DD</sub> ). This is a multifunction pin. The RFOUT/V <sub>DD</sub> pin is dc-coupled and requires external matching to 50 Ω, as shown in Figure 38. See Figure 4 for the RFOUT/V <sub>DD</sub> interface schematic.
	EPAD	Exposed Pad. The exposed pad must be connected to RF/dc ground.

## THEORY OF OPERATION

The HMC1099 is a >10 W, gallium nitride (GaN), power amplifier that consists of a single gain stage that effectively operates like a single field effect transistor (FET). The device is internally prematched so that a simple, external matching network optimizes the performance across the entire operating

frequency range. The recommended dc bias conditions put the device in deep Class AB operation, resulting in high saturated output power (40.5 dBm typical) at improved levels of power efficiency (69% typical).

## APPLICATIONS INFORMATION

The drain bias voltage is applied through the RFOUT/ $V_{DD}$  pin, and the gate bias voltage is applied through the RFIN/ $V_{GG}$  pin. For operation of a single application circuit across the entire frequency range, it is recommended to use the external matching components specified in the typical application circuit (L1, C1, L3, and C8) shown in Figure 38. If operation is only required across a narrower frequency range, performance may be optimized additionally through the implementation of alternate matching networks. Capacitive bypassing of  $V_{DD}$  and  $V_{GG}$  is recommended.

The recommended power-up bias sequence follows:

1. Connect to the GND pin.
2. Set  $V_{GG}$  to  $-8$  V to pinch off the drain current.
3. Set  $V_{DD}$  to 28 V (drain current is pinched off).
4. Adjust  $V_{GG}$  more positive (approximately  $-2.5$  V to  $-3.0$  V) until a quiescent of  $I_{DD} = 100$  mA is obtained.
5. Apply the RF signal.

The recommended power-down bias sequence follows:

1. Turn off the RF signal.
2. Set  $V_{GG}$  to  $-8$  V to pinch off the drain current.
3. Set  $V_{DD}$  to 0 V.
4. Set  $V_{GG}$  to 0 V.

All measurements for this device were taken using the typical application circuit, configured as shown in the assembly diagram (see Figure 38). The bias conditions shown in the electrical specifications table (see Table 1 to Table 3) are the operating points recommended to optimize the overall performance. Unless otherwise noted, the data shown was taken using the recommended bias conditions. Operation of the [HMC1099](#) under other bias conditions may provide performance that differs from what is shown in the Typical Performance Characteristics section.

The evaluation printed circuit board (PCB) provides the [HMC1099](#) in its typical application circuit, allowing easy operation using standard dc power supplies and 50  $\Omega$  RF test equipment.

## TYPICAL APPLICATION CIRCUIT

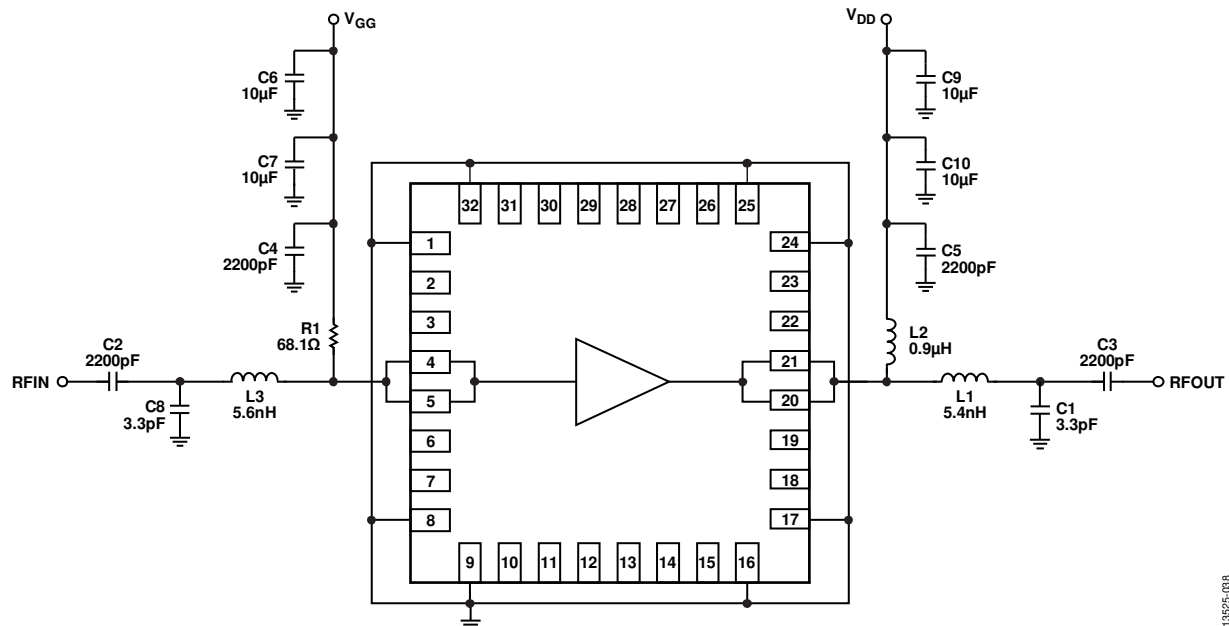

Figure 38. Typical Application Circuit

138245-08 B

**EVALUATION PCB**

Use RF circuit design techniques for the circuit board used in the application. Provide 50 Ω impedance for the signal lines and directly connect the package ground leads and exposed paddle to the ground plane, similar to that shown in Figure 39. Use a

sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 39 is available from Analog Devices, Inc., upon request.
