

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Address: A1208, Overseas Decoration Building, #122 Zhenhua RD., Futian, Shenzhen, China

FEATURES

- Passive: no dc bias required**
- Conversion loss: 7 dB typical at 6 GHz to 11 GHz**
- Input IP3: 18 dBm typical at 6 GHz to 11 GHz**
- LO to RF isolation: 36 dB typical**
- Wide IF bandwidth: dc to 5 GHz**
- RoHS compliant, 12-terminal, 2.90 mm × 2.90 mm LCC package**

APPLICATIONS

- Microwave and very small aperture terminal (VSAT) radios**
- Test equipment**
- Point to point radios**
- Military electronic warfare (EW); electronic countermeasure (ECM); and command, control, communications and intelligence (C3I)**

GENERAL DESCRIPTION

The HMC553ALC3B is a general-purpose, double-balanced, gallium arsenide (GaAs), monolithic microwave integrated circuit (MMIC) mixer housed in a leadless Pb-free, RoHS compliant LCC package. The HMC553ALC3B can be used as an upconverter or downconverter between 6 GHz and 14 GHz. This mixer requires no external components or matching circuitry.

FUNCTIONAL BLOCK DIAGRAM

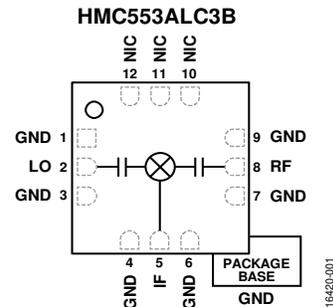

Figure 1.

The HMC553ALC3B provides local oscillator (LO) to radio frequency (RF) and LO to intermediate frequency (IF) suppression due to optimized balun structures. The mixer operates with LO drive levels from 9 dBm to 15 dBm. The HMC553ALC3B eliminates the need for wire bonding, allowing use of surface-mount manufacturing techniques.

ABSOLUTE MAXIMUM RATINGS

Table 2.

| Parameter | Rating |
|---|-----------------|
| RF Input Power | 25 dBm |
| LO Input Power | 25 dBm |
| IF Input Power | 25 dBm |
| IF Source/Sink Current | 3 mA |
| Reflow Temperature | 260°C |
| Maximum Junction Temperature | 175°C |
| Continuous Power Dissipation, P_{DISS} ($T_A = 85^\circ\text{C}$, Derate 4.6 mW/°C Above 85°C) | 414 mW |
| Operating Temperature Range | -40°C to +85°C |
| Storage Temperature Range | -65°C to +150°C |
| Lead Temperature Range | -65°C to +150°C |
| Electrostatic Discharge (ESD) Sensitivity | |
| Human Body Model (HBM) | 1000 V |
| Field Induced Charged Device Model (FICDM) | 1250 V |

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

Thermal performance is directly linked to PCB design and operating environment. Careful attention to PCB thermal design is required.

θ_{JA} is the natural convection junction to ambient thermal resistance measured in a one cubic foot sealed enclosure. θ_{JC} is the junction to case thermal resistance.

Table 3. Thermal Resistance

| Package Type | θ_{JA} | θ_{JC} | Unit |
|---------------------|---------------|---------------|------|
| E-12-4 ¹ | 120 | 175 | °C/W |

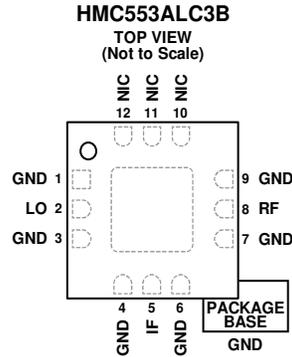

¹ See JEDEC standard JESD51-2 for additional information on optimizing the thermal impedance (PCB with 3 × 3 vias).

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

- NOTES**
1. NOT INTERNALLY CONNECTED. THESE PINS CAN BE CONNECTED TO RF/DC GROUND. PERFORMANCE IS NOT AFFECTED.
 2. EXPOSED PAD. THE EXPOSED PAD MUST BE CONNECTED TO RF/DC GROUND.

16420-002

Figure 2. Pin Configuration

Table 4. Pin Function Descriptions

| Pin No. | Mnemonic | Description |
|------------------|-------------|---|
| 1, 3, 4, 6, 7, 9 | GND | Ground. These pins and package bottom must be connected to RF/dc ground. |
| 2 | LO | Local Oscillator Port. This pin is ac-coupled and matched to 50 Ω. |
| 5 | IF | Intermediate Frequency Port. This pin is dc-coupled. For applications not requiring operation to dc, dc block this port externally using a series capacitor of a value chosen to pass the necessary IF frequency range. For operation to dc, this pin must not source or sink more than 3 mA of current or die malfunction and possible die failure may result. |
| 8 | RF | Radio Frequency Port. This pin is ac-coupled and matched to 50 Ω. |
| 10, 11, 12 | NIC EPAD | Not Internally Connected. These pins can be connected to RF/dc ground. Performance is not affected. Exposed Pad. The exposed pad must be connected to RF/dc ground. |

THEORY OF OPERATION

The HMC553ALC3B is a general-purpose, double-balanced mixer that can be used as an upconverter or a downconverter from 6 GHz to 14 GHz.

When used as a downconverter, the HMC553ALC3B downconverts radio frequencies (RF) between 6 GHz and 14 GHz to intermediate frequencies (IF) between dc and 5 GHz.

When used as an upconverter, the mixer upconverts intermediate frequencies between dc and 5 GHz to radio frequencies between 6 GHz and 14 GHz.

APPLICATIONS INFORMATION

TYPICAL APPLICATION CIRCUIT

Figure 82 shows the typical application circuit for the HMC553ALC3B. The HMC553ALC3B is a passive device and does not require any external components. The LO and RF pins are internally ac-coupled. The IF pin is internally dc-coupled. When IF operation to dc is not required, use of an external series capacitor is recommended, of a value chosen to pass the necessary IF frequency range. When IF operation to dc is required, do not exceed the IF source and sink current rating specified in the Absolute Maximum Ratings section.

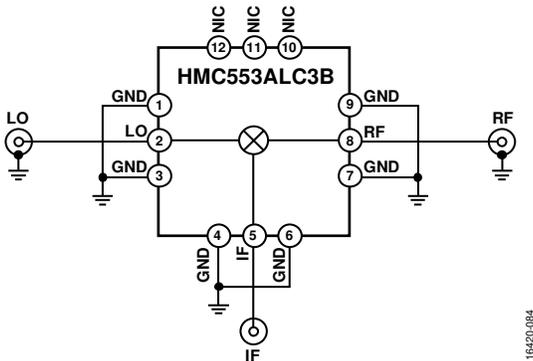

Figure 82. Typical Application Circuit

EVALUATION PCB INFORMATION

Use RF circuit design techniques for the circuit board used in the application. Ensure that signal lines have 50 Ω impedance, and connect the package ground leads and the exposed pad directly to the ground plane (see Figure 83). Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 83 is available from Analog Devices, Inc., upon request.
