

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**FEATURES**

**Conversion loss: 7.5 dB typical at 5.5 GHz to 10 GHz**  
**Local oscillator (LO) to radio frequency (RF) isolation: 45 dB typical at 5.5 GHz to 10 GHz**  
**LO to intermediate frequency (IF) isolation: 45 dB typical at 10 GHz to 14 GHz**  
**Input third-order intercept (IIP3): 21 dBm typical at 10 GHz to 14 GHz**  
**Input P1dB: 11.5 dBm typical at 10 GHz to 14 GHz**  
**Input second-order intercept (IIP2): 55 dBm typical at 10 GHz to 14 GHz**  
**Passive double-balanced topology**  
**Wide IF bandwidth: dc to 6 GHz**  
**12-lead ceramic leadless chip carrier package**

**APPLICATIONS**

**Point to point microwave radios**  
**Point to multipoint radios**  
**Military end use**  
**Instrumentation, automatic test equipment (ATE), and sensors**

**GENERAL DESCRIPTION**

The [HMC558A](#) is a general-purpose, double-balanced mixer in a leadless RoHS compliant SMT package that can be used as an upconverter or downconverter between 5.5 GHz and 14 GHz. This mixer is fabricated in a gallium arsenide (GaAs) metal semiconductor field effect transistor (MESFET) process, and requires no external components or matching circuitry.

**FUNCTIONAL BLOCK DIAGRAM**

Figure 1.

The [HMC558A](#) provides excellent LO to RF and LO to IF isolation due to optimized balun structures, and operates with LO drive levels as low as 9 dBm. The RoHS compliant [HMC558A](#) eliminates the need for wire bonding, and is compatible with high volume surface-mount manufacturing techniques.

## SPECIFICATIONS

LO drive level = 15 dBm,  $T_A = 25^\circ\text{C}$ , IF = 100 MHz, upper sideband, unless otherwise noted. All measurements performed as a downconverter.

**Table 1.**

Parameter	Min	Typ	Max	Unit
RF FREQUENCY RANGE	5.5		14	GHz
LO FREQUENCY RANGE	5.5		14	GHz
LO DRIVE LEVEL		15		dBm
IF FREQUENCY RANGE	DC		6	GHz
PERFORMANCE AT RF = 5.5 GHz to 10 GHz				
Conversion Loss		7.5	9.5	dB
Single Sideband (SSB) Noise Figure		7.5		dB
Input Third-Order Intercept (IIP3)	15	17.5		dBm
Input 1 dB Compression Point (IP1dB)		10		dBm
Input Second-Order Intercept (IIP2)		50		dB
RF to IF Isolation	8	16		dB
LO to RF Isolation	35	45		dB
LO to IF Isolation	20	35		dB
PERFORMANCE AT RF = 10 GHz to 14 GHz				
Conversion Loss		8.5	10	dB
SSB Noise Figure		10		dB
IIP3	16	21		dBm
IP1dB		11.5		dBm
IIP2		55		dB
RF to IF Isolation	10	19		dB
LO to RF Isolation	30	40		dB
LO to IF Isolation	20	45		dB

## ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
RF Input Power	25 dBm
LO Input Power	25 dBm
IF Input Power	25 dBm
IF Source/Sink Current	3 mA
Maximum Junction Temperature	175°C
Continuous P <sub>DISS</sub> (T = 85°C) (Derate 5.5 mW/°C Above 85°C)	495 mW
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature Range (Soldering 60 sec)	-65°C to +150°C
Electrostatic Discharge (ESD) Sensitivity	
Human Body Model (HBM)	2500 V (Class 2)
Field Induced Charged Device Model (FICDM)	1000 V (Class C5)

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Careful attention to PCB thermal design is required.

Table 3. Thermal Resistance

Package Type	$\theta_{JC}$	Unit
E-12-1 <sup>1</sup>	180	°C/W

<sup>1</sup> See JEDEC standard JESD51-2 for additional information on optimizing the thermal impedance (PCB with 3 × 3 vias).

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

# PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

NOTES  
 1. NIC = NO INTERNAL CONNECTION.  
 2. EXPOSED PAD. CONNECT THE EXPOSED PAD TO A LOW IMPEDANCE THERMAL AND ELECTRICAL GROUND PLANE.

15000-002

Figure 2. Pin Configuration

Table 4. Pin Function Descriptions

Pin No.	Mnemonic	Description
1, 3, 4, 6, 7, 9	GND	Ground. See Figure 6 for the ground interface schematic.
2	LO	Local Oscillator Port. This pin is ac-coupled and matched to 50 Ω. See Figure 4 for the LO interface schematic.
5	IF	DC-Coupled IF. For applications not requiring operation to dc, dc block this port externally using a series capacitor whose value is chosen to pass the necessary IF frequency range. For operation to dc, this pin must not source or sink more than 3 mA of current, or device nonfunction and possible device failure may result. See Figure 5 for the IF interface schematic.
8	RF	RF Port. This pin is ac-coupled internally and matched to 50 Ω. See Figure 3 for the RF interface schematic.
10, 11, 12	NIC EPAD	No Internal Connection. These pins can be grounded. Exposed Pad. Connect the exposed pad to a low impedance thermal and electrical ground plane.

Figure 32. IF Return Loss vs. IF Frequency at Various Temperatures, LO Power = 15 dBm, LO Frequency = 11 GHz

**SPURIOUS PERFORMANCE**

Mixer spurious products are measured in dBc from the IF output power level. Spur values are  $(M \times RF) - (N \times LO)$ .

Lower sideband selected, IF = 100 MHz, RF frequency = 8.1 GHz, RF input power = -10 dBm, LO frequency = 8.0 GHz, LO drive = 15 dBm.

## THEORY OF OPERATION

The [HMC558A](#) is a general-purpose double balanced mixer in a leadless RoHS compliant SMT package that can be used as an upconverter or downconverter between 5.5 GHz and 14 GHz. This mixer is fabricated in a GaAs MESFET process, and requires no external components or matching circuitry. The [HMC558A](#) provides excellent LO to RF and LO to IF isolation due to optimized balun structures and operates with LO drive levels as low as 9 dBm. The RoHS compliant [HMC558A](#) eliminates the need for wire bonding, and is compatible with high volume surface mount manufacturing techniques.

## APPLICATIONS INFORMATION

### TYPICAL APPLICATION CIRCUIT

Figure 34. Typical Application Circuit

15000-028

### EVALUATION BOARD INFORMATION

The circuit board used in an application must use RF circuit design techniques. Signal lines must have 50 Ω impedance, and the package ground leads and exposed pad must be connected directly to the ground plane, similarly to that shown in Figure 35. Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 35 is available from Analog Devices, Inc., upon request.
