

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

GaAs MMIC x2 ACTIVE FREQUENCY MULTIPLIER, 18 - 29 GHz OUTPUT

Typical Applications

The HMC576 is suitable for:

- Clock Generation Applications:
SONET OC-192 & SDH STM-64
- Point-to-Point & VSAT Radios
- Test Instrumentation
- Military EW / Radar
- Space

Features

- High Output Power: +17 dBm
- Low Input Power Drive: -2 to +6 dBm
- Fo Isolation: >20 dBc @ Fout= 24 GHz
- 100 KHz SSB Phase Noise: -132 dBc/Hz
- Single Supply: +5V@ 82 mA
- Die Size: 1.18 x 1.23 x 0.1 mm

Functional Diagram

General Description

The HMC576 die is a x2 active broadband frequency multiplier utilizing GaAs PHEMT technology. When driven by a +3 dBm signal, the multiplier provides +17 dBm typical output power from 18 to 29 GHz. The Fo and 3Fo isolations are >20 dBc and >30 dBc respectively at 24 GHz. The HMC576 is ideal for use in LO multiplier chains for Pt to Pt & VSAT Radios yielding reduced parts count vs. traditional approaches. The low additive SSB Phase Noise of -132 dBc/Hz at 100 kHz offset helps maintain good system noise performance.

Electrical Specifications, $T_A = +25^\circ \text{C}$, Vdd1, Vdd2 = 5.0V, 3 dBm Drive Level

Parameter	Min.	Typ.	Max.	Units
Frequency Range, Input	9.0 - 14.5			GHz
Frequency Range, Output	18 - 29			GHz
Output Power	11	17		dBm
Fo Isolation (with respect to output level)		20		dBc
3Fo Isolation (with respect to output level)		17		dBc
Input Return Loss		10		dB
Output Return Loss		9		dB
SSB Phase Noise (100 kHz Offset)		-132		dBc/Hz
Supply Current (Idd1 & Idd2)		82		mA

GaAs MMIC x2 ACTIVE FREQUENCY MULTIPLIER, 18 - 29 GHz OUTPUT

Absolute Maximum Ratings

RF Input (Vdd = +5V)	+20 dBm
Supply Voltage (Vdd1, Vdd2)	+6.0 Vdc
Channel Temperature	175 °C
Continuous P _{diss} (T= 85 °C) (derate 7.9 mW/°C above 85 °C)	709 mW
Thermal Resistance (channel to die bottom)	126 °C/W
Storage Temperature	-65 to +150 °C
Operating Temperature	-55 to +85 °C

Typical Supply Current vs. Vdd

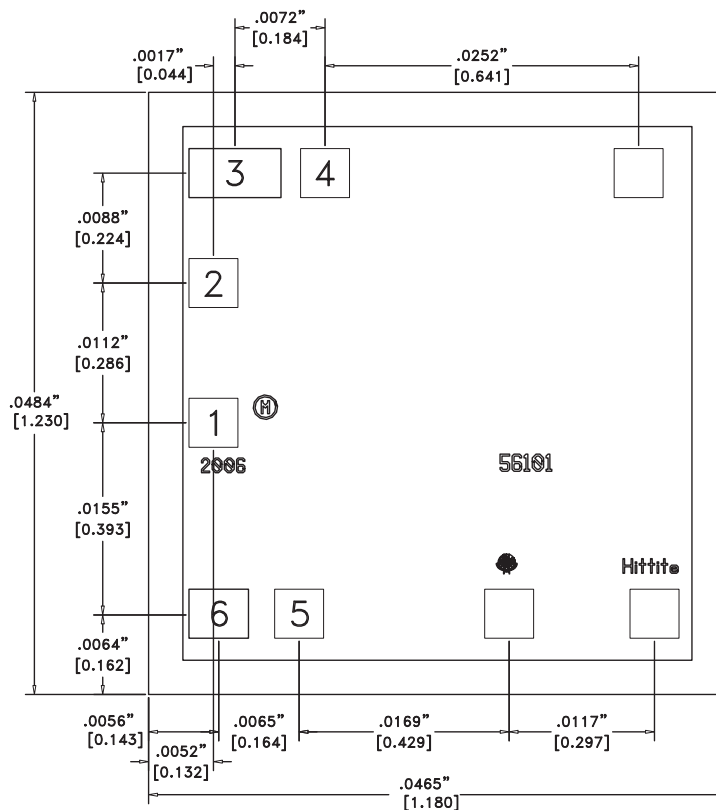

Vdd (V)	I _{dd} (mA)
4.5	82
5.0	82
5.5	83

Note:
Multiplier will operate over full voltage range shown above.

Outline Drawing

Die Packaging Information [1]

Standard	Alternate [2]
GP-2 (Gel Pack)	—

[1] Refer to the "Packaging Information" section for die packaging dimensions.
[2] Reference this suffix only when ordering alternate die packaging.

NOTES:

- ALL DIMENSIONS ARE IN INCHES [MILLIMETERS].
- DIE THICKNESS IS .004"
- TYPICAL BOND PAD IS .004" SQUARE.
- TYPICAL BOND SPACING IS .006" CENTER TO CENTER.
- BOND PAD METALIZATION: GOLD
- BACKSIDE METALIZATION: GOLD
- BACKSIDE METAL IS GROUND.
- NO CONNECTION REQUIRED FOR UNLABELED BOND PADS.

GaAs MMIC x2 ACTIVE FREQUENCY MULTIPLIER, 18 - 29 GHz OUTPUT

Pad Description

Pad Number	Function	Description	Interface Schematic
1, 2	Vdd1, Vdd2	Supply voltage 5V ± 0.5V.	
3	RFOUT	Pin is AC coupled and matched to 50 Ohms from 18 - 29 GHz.	
4, 5	GND	Die bottom must be connected to RF ground.	
6	RFIN	Pin is AC coupled and matched to 50 Ohms from 9 - 14.5 GHz.

GaAs MMIC x2 ACTIVE FREQUENCY MULTIPLIER, 18 - 29 GHz OUTPUT

Mounting & Bonding Techniques for Millimeterwave GaAs MMICs

The die should be attached directly to the ground plane eutectically or with conductive epoxy (see HMC general Handling, Mounting, Bonding Note).

50 Ohm Microstrip transmission lines on 0.127mm (5 mil) thick alumina thin film substrates are recommended for bringing RF to and from the chip (Figure 1). If 0.254mm (10 mil) thick alumina thin film substrates must be used, the die should be raised 0.150mm (6 mils) so that the surface of the die is coplanar with the surface of the substrate. One way to accomplish this is to attach the 0.102mm (4 mil) thick die to a 0.150mm (6 mil) thick molybdenum heat spreader (moly-tab) which is then attached to the ground plane (Figure 2).

Microstrip substrates should be brought as close to the die as possible in order to minimize ribbon bond length. Typical die-to-substrate spacing is 0.076mm (3 mils). Gold ribbon of 0.075 mm (3 mil) width and minimal length <0.31 mm (<12 mils) is recommended to minimize inductance on RF, LO & IF ports.

An RF bypass capacitor should be used on the Vdd input. A 100 pF single layer capacitor (mounted eutectically or by conductive epoxy) placed no further than 0.762mm (30 Mils) from the chip is recommended.

Handling Precautions

Follow these precautions to avoid permanent damage.

Storage: All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

Cleanliness: Handle the chips in a clean environment. DO NOT attempt to clean the chip using liquid cleaning systems.

Storage: All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

Static Sensitivity: Follow ESD precautions to protect against > ± 250V ESD strikes.

Transients: Suppress instrument and bias supply transients while bias is applied. Use shielded signal and bias cables to minimize inductive pick-up.

General Handling: Handle the chip along the edges with a vacuum collet or with a sharp pair of bent tweezers. The surface of the chip may have fragile air bridges and should not be touched with vacuum collet, tweezers, or fingers.

Mounting

The chip is back-metallized and can be die mounted with AuSn eutectic preforms or with electrically conductive epoxy. The mounting surface should be clean and flat.

Eutectic Die Attach: A 80/20 gold tin preform is recommended with a work surface temperature of 255 deg. C and a tool temperature of 265 deg. C. When hot 90/10 nitrogen/hydrogen gas is applied, tool tip temperature should be 290 deg. C. DO NOT expose the chip to a temperature greater than 320 deg. C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

Epoxy Die Attach: Apply a minimum amount of epoxy to the mounting surface so that a thin epoxy fillet is observed around the perimeter of the chip once it is placed into position. Cure epoxy per the manufacturer's schedule.

Wire Bonding

Ball or wedge bond with 0.025mm (1 mil) diameter pure gold wire. Thermosonic wirebonding with a nominal stage temperature of 150 deg. C and a ball bonding force of 40 to 50 grams or wedge bonding force of 18 to 22 grams is recommended. Use the minimum level of ultrasonic energy to achieve reliable wirebonds. Wirebonds should be started on the chip and terminated on the package or substrate. All bonds should be as short as possible <0.31mm (12 mils).
