Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

HMC6147ALC5A

v01.0514

GaAs MMIC I/Q DOWNCONVERTER 37 - 44 GHz

Typical Applications

The HMC6147ALC5A is ideal for:

- Point-to-Point and Point-to-Multi-Point Radio
- Military Radar, EW & ELINT
- Satellite Communications
- Sensors

Features

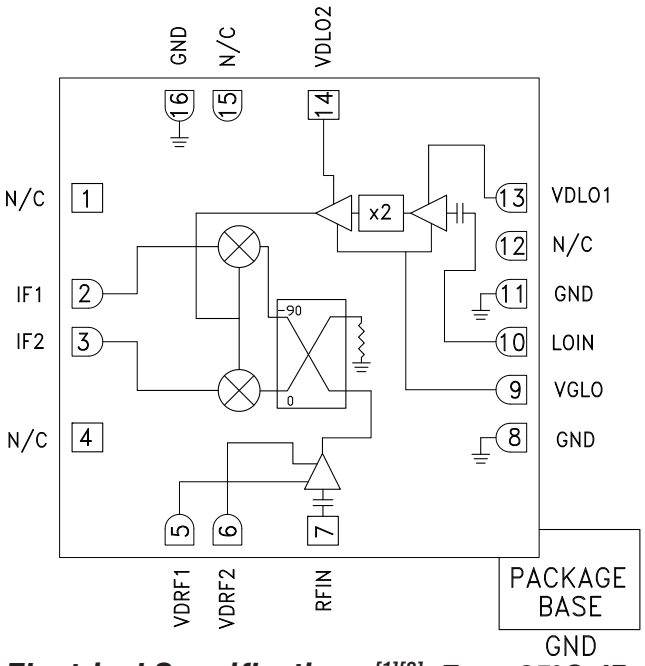
Conversion Gain: 13 dB

Excellent Image Rejection: 25 dB

Output IP3: +12 dBm

16 Lead 5x5 mm SMT Ceramic Package: 25 mm²

Functional Diagram



General Description

The HMC6147ALC5A is a compact GaAs MMIC I/Q downconverter in a leadless RoHS compliant SMT package. This device provides a small signal conversion gain of 13 dB with 25 dBc of sideband rejection. The HMC6147ALC5A utilizes a low noise amplifier to drive the I/Q mixer where the LO is driven by a X2 multiplier. IF1 and IF2 mixer inputs are provided and an external 90° hybrid is needed to select the required sideband. The I/Q mixer topology reduces the need for filtering of the unwanted sideband. The HMC6147ALC5A is a much smaller alternative to hybrid style single sideband converter assemblies and it eliminates the need for wire bonding by allowing the use of surface mount manufacturing techniques.

Electrical Specifications [1][2], T_A = +25°C, IF = 1000 MHz, LO = +3 dBm, VDLO1,2 = +3V, IDLO1,2 = 150 mA, VDRF1,2= +3V, IDRF1,2 = 75 mA, USB [1][2]

Parameter	Min.	Typ.	Max.	Units
Frequency Range, RF		37 - 44		GHz
Frequency Range, LO		16.5 - 22		GHz
Frequency Range, IF		0 - 4		GHz
Conversion Gain	10	13		dB
Image Rejection	15	25		dBc
1 dB Compression (Output)		1		dBm
IP3 (Input)		2		dBm
Noise Figure		3.5		dB
Supply Current IDLO1 + IDLO2 quiescent [2]		150		mA
Supply Current IDRF1 + IDRF2		75		mA

[1] Unless otherwise noted all measurements performed with low side LO, IF = 1000 MHz and external IF 90° hybrid.
[2] Adjust Vgg between -2 to 0V to achieve IDLO1 + IDLO2 = 150 mA Typical with RF turned off.

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 4, 12,15	N/C	No connection required. The pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/DC ground externally.	
2	IF1	These pins are DC coupled. For applications not requiring operation to DC this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary frequency range. For operation to DC, this pin must not sink / source more than 3 mA of current or part non-function and possible failure will result.	3	IF2		
5	VDRF1	Bias for LNA. The recommended DC voltage is 3V	6	VDRF2		
7	RFIN	This pin is AC coupled and matched to 50 Ohms.	8,11, 16	GND	These pins and expossed ground paddle must be connected to RF/DC ground.	
9	VG	Adjust VGLO for -1V to 0V to set the multiplier quiescent current to 150mA	10	LOIN	LO Input Port. The recommended LO Power is 0 to 6 dBM	13	VDLO1	Bias for Multiplier input Buffer Amp. The recommended DC voltage is 3V	14	VDLO2	Bias for Multiplier output Buffer Amp. The recommended DC voltage is 3V

C2, C5, C11, C13, C15	0.1 uF Capacitor, 0402 Pkg.
C3, C6, C12, C17, C18	4.7 µF Capacitor, Case A
U1	HMC6147ALC5A Downconverter
PCB [2]	600-00029-00 Evaluation Board

[1] Reference this number when ordering complete evaluation PCB

[2] Circuit Board Material: Arlon 25FR, FR4 or Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
