- Point-to-Point and Point-to-Multi-Point Radio
- Military Radar, EW & ELINT
- Satellite Communications
- Maritime & Mobile Radio

### Features

- Conversion Gain: 11 dB
- Image Rejection: 25 dB
- LO to RF Isolation: -50 dB
- Noise Figure: 2.2 dB
- Input IP3: +2 dBm
- 32 Lead 5x5mm Ceramic SMT Package: 25mm<sup>2</sup>

### Functional Diagram

### General Description

The HMC908LC5 is a compact GaAs MCM I/Q downconverter in a leadless RoHS compliant SMT ceramic package. This device provides a small signal conversion gain of 11 dB with a noise figure of 2.2 dB and 25 dB of image rejection. The HMC908LC5 utilizes an LNA followed by an image reject mixer which is driven by an LO buffer amplifier. The image reject mixer eliminates the need for a filter following the LNA, and removes thermal noise at the image frequency. I and Q mixer outputs are provided and an external 90° hybrid is needed to select the required sideband. The HMC908LC5 is a much smaller alternative to hybrid style image reject mixer downconverter assemblies, and it eliminates the need for wire bonding by allowing the use of surface mount manufacturing techniques.

### Electrical Specifications, $T_A = +25\text{ }^\circ\text{C}$ , $IF = 100\text{ MHz}$ , $LO = 0\text{ dBm}$ , $VD1 = VD2 = 3V$ , $VD3 = 5V^*$

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
